AREA SUMMARY

- 1.1 AREA PLANNING SUMMARY
- 1.2 INTRODUCTION
- 1.3 NORTH END / SODDY-DAISY STUDY AREA
- 1.4 HISTORY OF NORTH END / SODDY-DAISY

1.1 AREA PLANNING SUMMARY

The Hamilton County Area Plans represent a comprehensive approach to managing growth and change in our diverse communities, recognizing both the distinct identities of each Area and the interconnectedness of our County. With a focus on the specific challenges and opportunities within Hamilton County's unincorporated Areas, each plan addresses critical factors that shape community life—land use, infrastructure, environmental preservation, housing, and economic resilience. Throughout the planning process, we engaged with community members to create a vision that reflects local priorities and builds on the character and strengths of each Area.

From the rural expanse and scenic beauty of Sale Creek and Birchwood, to the residential communities of Georgetown and Apison, to the vibrant mountain villages and outdoor offerings of the Walden Plateau, or the waterfront community of Lakesite, all places where many families have multi-generation histories attached to the landscape, the plans recognize the local topographic, geologic, and infrastructure constraints found in these unique areas. This approach allows for tailored strategies that honor local heritage, rural qualities, and natural landscapes while accommodating sustainable growth. This approach allows for tailored strategies that honor local heritage, rural qualities, and natural landscapes while accommodating sustainable growth.

The planning process began with in-depth research and analysis to understand the existing conditions, demographic trends, and economic drivers across Hamilton County. By examining land use, transportation networks, environmental features, and community facilities, we identified both opportunities and constraints in each area. This research also shed light on trends such as housing demands, population shifts, and economic patterns, allowing us to anticipate future needs and create a foundation for adaptable, forward-looking plans.

The visions articulated in these Plans emerged from collaborative dialogue with residents, local stakeholders, and county officials. Community workshops, surveys, and public meetings provided residents the opportunity to voice their aspirations, concerns, and ideas for the

future of their neighborhoods. The resulting goals and policies emphasize maintaining rural character, supporting local businesses, enhancing outdoor recreation, and fostering a sense of place in each community. Across the county, residents expressed a desire to balance growth with preservation—ensuring that any new development is thoughtfully integrated by accelerating infrastructure planning and delivery, improving development review and design criteria, and that it contributes positively to the character of their communities.

To bring these visions to life, the Area Plans detail policies and actions centered on Community Character and Land Use, Natural Resources, Economic Health and Community, and Funding Mechanisms. These categories have been refined to address the County's evolving needs and offer the most impactful steps forward.

The Chapter 5 implementation strategies focus on practical and ready to implement policy changes and development principles, as well as, collaborative actions. Partnerships with local and regional organizations, support for small businesses, and investments in community facilities are vital to advancing these initiatives. Monitoring and evaluation will be critical to ensure the plans stay flexible, allowing policies to adapt as new challenges and opportunities emerge. Each Area Plan is intended as a living document, responsive to ongoing community input and changing needs over time.

As we move from planning to action, the success of this Plan relies on commitment, collaboration, and community engagement. Hamilton County and the RPA is dedicated to working closely with residents, businesses, and local leaders to implement these policies in a way that fosters a resilient future based on resident priorities and objectives. By advancing these Plans with a shared sense of purpose, we can create communities that are not only livable and economically vibrant but also reflective of the unique character that residents value. Through strategic growth, environmental stewardship, and respect for community identity, the Comprehensive Plan will encourage each Area to thrive for generations to come.

1.2 INTRODUCTION

As Hamilton County's population grows, thoughtful planning is crucial to managing the upcoming changes while efficiently using limited resources. The goal is to create resilient communities where neighborhoods, commercial centers, parks, and natural spaces flourish, striking a balance between development and conservation.

To guide this growth, we develop specific Plans that are later presented to local legislative bodies for adoption. These Plans become essential in shaping zoning, guiding private development, and influencing public infrastructure investments. They serve as a blueprint for determining where growth, redevelopment, and conservation should occur.

The Plans will equip Hamilton County leadership with the tools necessary to make strategic community investments in infrastructure, staff, and services, ensuring a livable community with sustained economic opportunities.

Community input is essential to shaping Hamilton County's long-term planning efforts, ensuring that residents and business owners help define the County's future. The 2016 Comprehensive Plan established a responsible land-use framework that prioritizes environmental preservation and community character. Complementing this, the Regional Transportation Plan (RTP) forecasts transportation needs and guides infrastructure investment.

Area Plans provide localized guidance on development, zoning, infrastructure, and conservation. These plans use tools like a Conceptual Land Use map that is illustrative and Place Types maps that define development patterns and set policies for future growth. They are shaped by prior planning, community feedback, and professional analysis. Key goals include creating vibrant, well-defined spaces and balancing growth while preserving each area's character and meeting future demands.

Although Area Plans do not regulate development or change zoning directly, they guide policy and decisions related to infrastructure, housing diversity, and commercial centers. They emphasize efficient investment in public services, transportation, and natural resource preservation, especially in rural areas. Constraints like limited sewer capacity, emergency services, and infrastructure demands shape policies to ensure sustainable growth while maintaining residents' quality of life.

The North End / Area 13 Plan features five chapters which cover the following:

1.3 NORTH END / SODDY-DAISY STUDY AREA 13

The North End/Soddy-Daisy area of Hamilton County is where the tranquility of rural life blends seamlessly with suburban conveniences, offering a unique community that's deeply connected to its landscape and history. Nestled between Walden's Ridge and the Tennessee River, this region is defined by its scenic vistas, farmlands and vibrant neighborhoods, each with its own distinct charm and story to tell.

Area 13's natural beauty is more than just a backdrop—it's a way of life. Rolling hills, verdant green spaces, and the presence of the Tennessee River along its western edge create a peaceful retreat for both residents and visitors. This dynamic area of Hamilton County is marked by a harmonious mix of residential, commercial, and recreational spaces. From charming historic homes to modern developments designed for growing families, the housing options reflect the area's rich diversity. Strong educational institutions further enhance its appeal, making it an ideal place for families seeking quality schooling in a tranquil environment.

Beneath its serene exterior lies a complicated past. The North End's history is woven with stories of struggle and resilience — from the Trail of Tears to the industrial booms and busts that shaped the local economy. These experiences have forged a deep sense of identity and pride among its residents, who are committed to preserving the area's rural character even as it grows.

Economically, the North End thrives on the strength of its small businesses, retail centers, and professional services. Its strategic location ensures easy access to major transportation routes, connecting residents to nearby urban centers while supporting the region's economic vitality. For outdoor enthusiasts, the North End is a haven. The area's numerous parks, trails, and nature reserves and proximity to Lake Chickamauga invite exploration and an active lifestyle, with the community's dedication to preserving these green spaces ensuring that nature remains at the heart of life here.

Community engagement is woven into the fabric of the North End, where local events, farmers' markets, and cultural activities bring residents together, fostering a strong sense of belonging and civic pride. As Hamilton County continues to evolve, the North End/Soddy-Daisy area remains a focal point for thoughtful planning and sustainable development.

North End / Soddy-Daisy Area 13 Map

Figure 1.2: North End / Soddy-Daisy Area 13 Map

1.4 HISTORY OF NORTH END/ SODDY-DAISY

The North End/Soddy-Daisy area of Hamilton County is steeped in history and cultural significance, with landmarks and narratives that reflect its rich past. The Tennessee River, a vital lifeline for centuries, has witnessed key events such as the Cherokee-American War and Civil War skirmishes that have left an indelible mark on the landscape. The McDonald Farm, a historical and agricultural cornerstone, exemplifies the area's deep agricultural heritage and connection to the land. This region's historical and cultural fabric is woven with stories of resilience and adaptation with the Trail of Tears crossing directly through this area, underscoring the importance of preserving its scenic landscapes and agricultural heritage as the area continues to evolve.

TRAIL OF TEARS

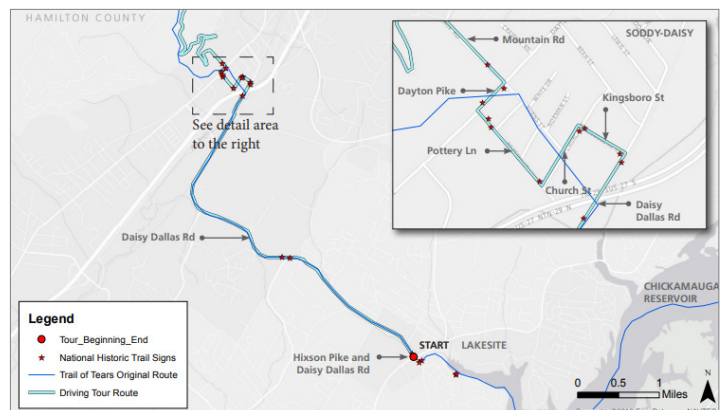

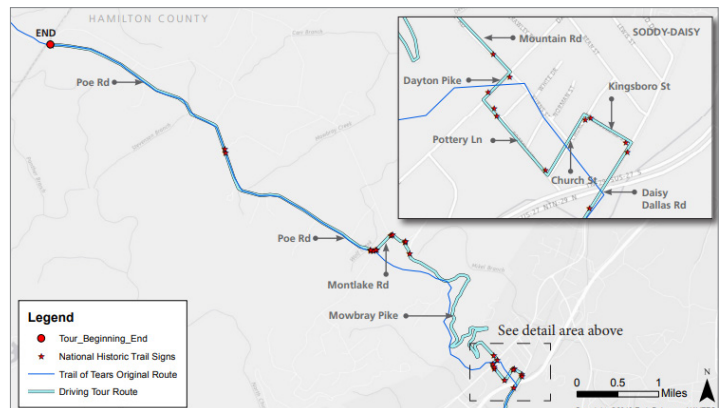

The Trail of Tears is a significant historical event that left a lasting impact on the cultural and geographical landscape of Hamilton County. The Indian Removal Act passed by U.S. Congress in 1830 forced the relocation of Native American tribes. Thousands of Cherokee people passed through this region on their journey to the designated Indian Territory. This event significantly influenced the area's demographics and social fabric, with remnants of the historic route still evident in the region's trails and markers.

There are approximately 12 miles of navigable route remaining for the Trail of Tears starting in Area 8 and terminating in Area 13. The maps on the right identify the starting and ending route where the paved roadways follow along the original route. The Trail of Tears is a crucial aspect of history, reflecting the broader national policies and events that have shaped the development and character of the community.

Sale Creek Sign

Source: northhamiltonn.com

SALE CREEK

Sale Creek is one of the three main neighborhoods that make up Area 13. Now with approximately a population of approximately 3,021 in the 2020 Census, the area has a strong military history. Sale Creek initially received its name due to an auction in 1779 during the Cherokee-American wars with items the frontiersmen collected during the war. One of the main creek's that runs through this area was also named Sale Creek in honor of this community. This area was also occupied during the Civil War from September to December 1863 by the 6th Tennessee Infantry.

McDonald Farm

Source: Fox Chattanooga (WTVG)

MCDONALD FARM

McDonald Farm has a rich history that reflects the agricultural heritage of the region. The farm which was initially occupied by native american tribes was established in the late 19th century, the farm was owned by the McDonald family, who played a significant role in the local community through their farming operations. Spanning over 2,100 acres, the farm became well-known for its dairy and cattle production, contributing to the agricultural economy of Hamilton County. In late 2021, Hamilton County purchased the entire site for approximately \$16 million to ensure that it not only brings recreational opportunities to Hamilton County residents but future uses are anticipated to create new jobs within the County limits.

Good Old Days Museum

Source: Chattanooga.org

SODDY-DAISY HISTORY

The origins of the names "Soddy" and "Daisy" are tied to local history. "Soddy" may derive from the Cherokee word "Tsati," meaning "sipping place," possibly referencing the area's lakes, creeks, and streams. Another theory links the name to William Sodder's Trading Post. Daisy was named after Daisy Parks, the daughter of a coal company vice-president. Both communities thrived as coal mining towns until the 1930s, with industries such as a hosiery mill, turpentine plant, and pottery kilns also active. In April 1969, Soddy and Daisy were incorporated into one city, stretching about nine miles along US-27.

CHAPTER 2

RESEARCH & ANALYSIS

- 2.1 COMMUNITY SUMMARY
- 2.2 COMMUNITY PROFILE
- 2.3 DEMOGRAPHICS & ECONOMIC TRENDS
- 2.4 COMMUNITY THEMES
- 2.5 PLAN ANALYSIS

2.1 COMMUNITY SUMMARY

Area 13 includes the remainder of Hamilton County through Chickamauga Lake, Flattop Mountain, and Soddy-Daisy. This area of Hamilton County focuses on agricultural operations and is a rural area of Hamilton County with the entirety of the eastern unincorporated border on the TN River/Chickamauga Lake Reservoir waterfront. The southern portion of Area 13 is within the incorporated limits of Soddy-Daisy and the remainder of the area is conveniently located on both sides of Interstate 27 and other local roads promoting connectivity between surrounding communities. With a significant number of schools, this area serves predominantly residential and rural residential neighborhoods. A primary objective of this area is to focus on infrastructure needs and maintaining the agricultural objectives of the community. Growth in this area should focus on infrastructure needs first and the growth of the agricultural heritage and the natural beauty throughout this area.

COMMUNITY CHARACTER

- » Predominantly rural portion of Hamilton County populated by families who have often lived within the area for generations.
- » Both lakefront and mountain living are available along with multiple subdivisions, small towns, and good schools.
- » Agricultural operations are still a critical employment sector, source of cultural identity, and feature of the landscape.
- » TN Scenic Parkway US-27 bisects Area 13 along its North/South axis promoting convenient access throughout the area and to surrounding communities.
- » Opportunities for recreation and trail/greenway connectivity between community centers and assets associated with the mountains and river.
- » A robust recreational system exists that includes the Cumberland Plateau and local waterways.

McDonald Farm

Source: Old McDonald Farm, Facebook.com

REGIONAL FACILITIES AND ASSETS

Area 13 contains prime farmland and is largely zoned for agricultural use in areas outside of Sale Creek and Soddy-Daisy where commercial development is located and includes easy access from Hwy 111 to the plateau.

McDonald Farm:

One of the key future assets of unincorporated Hamilton County. The county has many existing parks in established areas that will continue to provide benefits. The county has owned the property since 2022 and due to its size, it can become both an important regional park asset and economic opportunity. The former farm currently serves as a public open space and event venue. The County Fair was re-launched in 2023 at this location. The RPA has undertaken an economic impact analysis of the site to guide future uses. Opportunities for the site are outlined further in Chapter 4.

Parks:

The Tennessee River, Rock Creek, Possum Creek and significant preserved natural areas (Audubon Mtn, State Parks, and forest lands), and a well established trail network including segments of the Cumberland Trail offer many recreational opportunities including:

- » Holly Circle - County boat ramp
- » Big Soddy Creek Gulf
- » Poe's Tavern Historical Park
- » North Soddy Lake Park
- » Veterans Park
- » North Chickamauga Creek
- » McDonald Farm County Park
- » Sale Creek launch & ramp

PRIMARY CONSTRAINTS

Community Concerns:

Area 13 residents have articulated concerns about the potential pace of growth and development and the need to first address gaps in area infrastructure, emergency services, and a strategy for preserving agricultural lifestyles and business operations.

Drainage & Water:

A series of creek drainages run throughout Area 13 from east to west. Possum Creek, Middle Creek, Rock Creek, Big Soddy Creek and Little Soddy Creek, McGill Creek, N. Chickamauga Creek and Sale Creek all flow to the Tennessee River. These creeks and drainages make road connectivity a challenge and result in large land areas that are prone to flooding.

- » Very limited access to centralized sewer and water infrastructure outside of that existing within Soddy-Daisy jurisdictional authority.

Roadways & Railways:

The sparse nature of the road network and natural features that must be navigated lead to slower point-to-point travel times, making emergency service response times a potential liability for new development.

- » Apart from US-27 and its associated exits, the remainder of the road network in Area 13 outside of Soddy-Daisy is sparse and connectivity is inhibited by several significant creek drainages, a rail corridor, and available public ROW.

2.3 DEMOGRAPHICS & ECONOMIC TRENDS

DEMOGRAPHICS OVERVIEW

Hamilton County Census data reveals a balanced distribution across age groups, including young families (30-34 Years), working professionals (25-29 Years), and retirees (60-69 Years). The County upholds a high level of educational attainment and a skilled workforce, reflecting the Area's commitment to quality education and lifelong learning. In comparison to the state of Tennessee as a whole, Hamilton County has a higher median income, advanced education background, higher employment rate, lower poverty rates, and lower commute times. These factors continue to contribute to growth in Hamilton County in both the incorporated and unincorporated Areas.

GROWTH TRENDS AND FUTURE PROSPECTS

Hamilton County has experienced steady population growth and economic development over the past decade, driven by strategic investments in infrastructure, education, and residential development. Future prospects remain positive, with planned developments emphasizing smart growth principles that enhance connectivity, sustainability, and quality of life for residents. By prioritizing the preservation of the region's distinctive character and promoting responsible development, ongoing efforts aim to attract new businesses and support entrepreneurial ventures that align with the community's vision, further diversifying the economic base and creating new growth opportunities. To anticipate these needs, the CHCRPA engaged RCLCO to complete a detailed market analysis to assess market opportunities for housing needs over the next 20 years.

ECONOMIC LANDSCAPE

As RCLCO highlights in their comprehensive market analysis for Hamilton County, the North County/Soddy-Daisy area stands out as “one of the more remote subareas, with very little development and plenty of large, vacant parcels.” Beyond the suburban boundaries of Soddy-Daisy, the region retains a distinctly rural character, with only modest settlement in Sale Creek and a few scattered sites throughout the expansive Area.

While U.S. Highway 27 remains the main thoroughfare connecting Chattanooga to Dayton, extending north to Fort Wayne, Indiana, and south to Miami, Florida, much of the tourist traffic has long since shifted to Interstate 75, located 27 miles eastward. Additionally, the area is 23 miles from Interstate 24 to the west, leaving it with neither direct nor indirect interstate highway access. There is a Norfolk-Southern trunk rail line runs through the area, connecting New Orleans to Cincinnati and Columbus, Ohio, with further connections to Detroit and Cleveland. This high-capacity line, capable of accommodating 315,000 pounds, is one of only three in the Norfolk-Southern system with such capacity. Despite this robust rail infrastructure, Area 13 has not experienced significant or sustained development in manufacturing or other industries utilizing the line.

The RCLCO study projects a strong growth in both industrial and residential development within Area 13 including:

- » 1,900 units of detached single family residential
- » 830 multifamily rental apartments
- » 4,000,000 SF of Industrial
- » 240,000 SF of commercial/retail

Additional comments & Driving Factors:

- » A large extent of the industrial projections are based on McDonald Farm being built out with Industrial uses.
- » The increase in industrial facilities will increase the need for retail and additional housing.
- » It is anticipated that Area 13 will generate Recreation and Tourism uses such as lodging, event facilities, marinas as well as specific recreational activities.
- » This area has a lot of potential for agricultural related businesses and Research and development due to the already existing significant agricultural component of the community.

Chart 1: Single- Family (Detached) Projections

2.4 COMMUNITY THEMES

The Plan Analysis section of the Area Plans provides a detailed examination of the current conditions, opportunities, and challenges within each Area, offering insights that will guide strategic decision-making and inform the implementation of targeted initiatives. Grounded in the four Community Themes - Land Use and Development Character, Resiliency, Transportation and Mobility, and Community Facilities - this analysis establishes a comprehensive framework that evaluates each Area's unique characteristics. This section includes the following categories:

2.4.1 Land Use and Development Character

Zoning:

Examination of land use patterns, existing zoning district designations to ensure that development harmonizes with the areas unique geological features.

Land Use:

Examination of existing land use patterns and street patterns in combination with existing zoning.

Building Permits:

Evaluates the current state and number of permits being issued within the Area and its impact on the surrounding community.

Development in North End/ Soddy-Daisy:

Overall analysis of how development in general is impacting or influencing the community and how its changed its character.

2.4.2 Resiliency

Natural Resources:

Evaluation of natural assets including parks, recreation, open spaces, slopes, waterways, aiming to balance preservation with development.

Infrastructure:

Evaluation of the existing adequacy of public utilities, including sanitary sewer, water, and trash?

2.4.3 Transportation & Mobility

Transportation:

This section evaluates the existing transportation infrastructure, including roadways, pedestrian, and cycling paths. It also considers future development needs and the potential impacts of anticipated growth.

2.4.4 Community Facilities

Schools and Major Institutions:

Examination of the role of these institutions in fostering learning, innovation while assessing their current state and future needs in the context of regional growth and development.

City, County, State/Land or Property:

Examination of ownership patterns and its impact on land management and development potential.

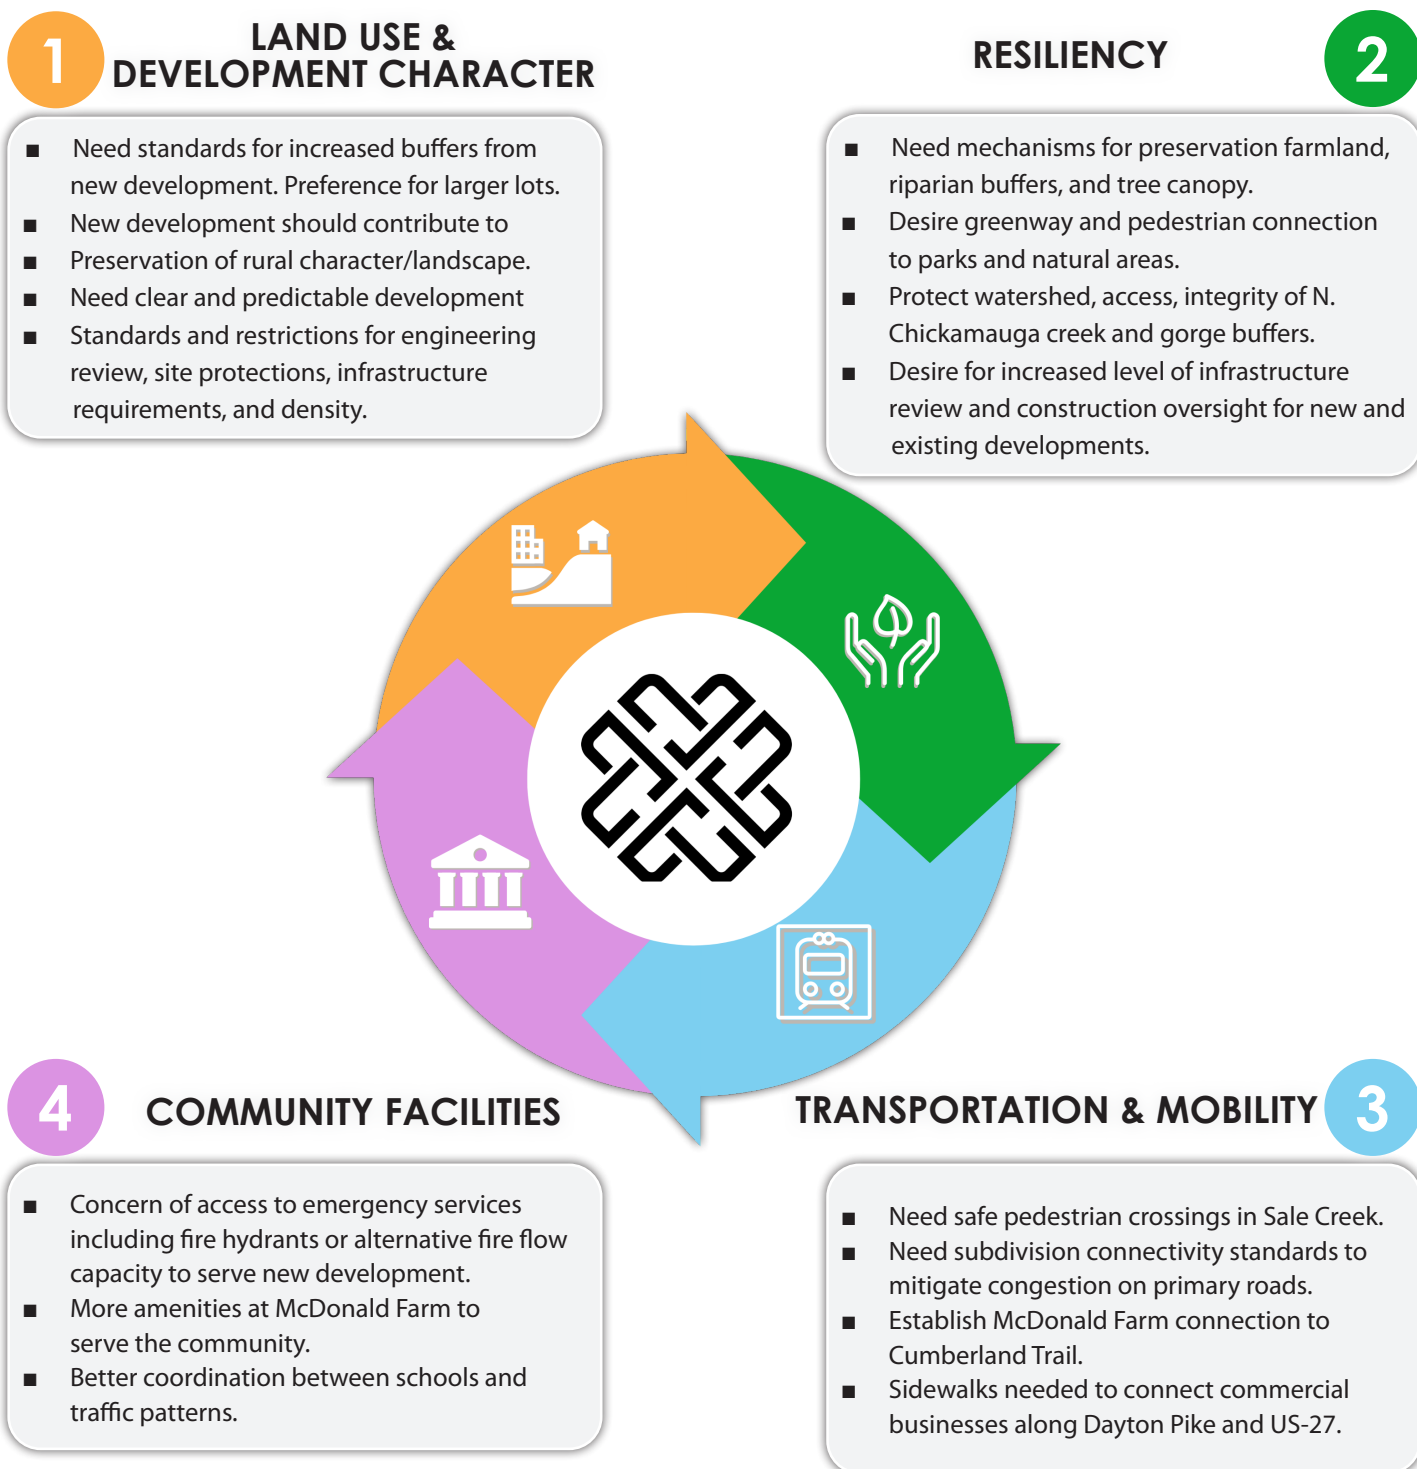

Emergency Services:

Examination of emergency response capabilities, encompassing fire, police, medical, and disaster response services.

2.5 PLAN ANALYSIS

In general, the community feedback phase was focused on identifying metrics for success based on critical outcomes. The desired outcomes have been organized into a framework of Community Themes or Drivers to provide structure to the plan analysis, recommendations, and implementation solutions. Identifying these themes and utilizing them as a framework for organizing each Area plan will provide community leaders with a set of filters for future strategic, policy, and project based decisions. The following graphic identifies the 4 Community Themes and the public consensus that framed the analysis, goals, and policies within Area 13.

2.5.1 CURRENT LAND USE AND DEVELOPMENT CHARACTER

The analysis of Land Use and Development Character in the North End/Soddy-Daisy area underscores the importance of preserving the region's rural identity while managing future growth. Located between Walden's Ridge and the Tennessee River, this area is marked by low-density residential zones, agricultural lands, and expansive natural spaces. The analysis highlights the need for a balanced approach to development, ensuring that any new growth aligns with the community's commitment to maintaining its scenic beauty and rural charm, while carefully integrating necessary services and amenities to support a sustainable future.

LAND USE

Area 13 is predominantly residential, with 38.5% of the land designated for single-family residential use. This substantial portion highlights the community's commitment to fostering a living environment that supports family life and neighborhood cohesion. Another approximately 26.5% of the land is used for agricultural/preserve purposes.

Land allocated for commercial or industrial purposes comprises less than 1% of the total area, underscoring the County's strategic approach to concentrating economic activities in specific zones that minimize disruption to residential areas. These commercial and industrial zones are essential for providing local employment opportunities and services but are carefully managed.

Institutional uses, such as schools and religious facilities, account for 0.5% of the land. This indicates a modest but vital presence of institutions that serve the educational and spiritual needs of the community, reinforcing the County's focus on fostering a supportive and well-rounded environment for its residents.

Approximately 31.6% of the area is classified as vacant offering potential for future development that can be thoughtfully planned to enhance the community without compromising its existing character. This mixture of existing land uses reflects the current community's desire for agricultural and residential preservation.

ZONING

Currently, the majority of Area 13 is zoned for low-density residential purposes, making up over 95% of the area. This includes A-1 Agriculture zone (90.7%), R-2 & R-2A Rural Residential (4.3%), R-1 single-family residential (1.8%), and R-5 (2%). These zoning classifications preserve the rural character and open spaces that define much of the region, ensuring that agricultural activities and low-density housing remain predominant, an important aspect of maintaining the community character.

Commercially and mixed-use zoned areas, on the other hand, are relatively scarce, comprising of slightly over 1% of the land. These commercial zones are strategically concentrated along two primary corridors: Dayton Pike (Hwy 27) and Sequoyah Road. These commercial corridors provide essential services and retail opportunities while the remainder of the area is zoned agricultural or residential.

This zoning landscape highlights the North End/Soddy-Daisy’s thoughtful planning approach, balancing growth and development with the preservation of its cherished rural character. By focusing on residential and agricultural zones while strategically placing commercial areas, the County maintains its unique identity and ensures a high quality of life for its residents.

BUILDING PERMITS & DEVELOPMENT PATTERNS

Over the past decade, the North End/Soddy-Daisy Area has witnessed fluctuations influenced by economic conditions, population growth, and shifting residential and commercial demands. As residential needs expand, the Area has experienced increased activity in new construction as infrastructure has allowed. Analyzing these trends offers valuable insights into the region’s growth patterns, regulatory impacts, and future development prospects, highlighting the dynamic nature of Area 13’s built environment.

Figure 2.3 reveals that the majority of permits issued have been for single-family homes which aligns with the existing and desired character of the community. The preference for single-family homes is anticipated to continue, as detailed in Chapter 2.3. The emphasis on low-density housing, agriculture, and community-centered amenities will most likely continue as there is a market demand for continued residential growth.

Following single-family residential permits, the “Other” classification represents the second-highest category for permit issuance as identified in Table 2. This activity reflects the Area’s evolving economic condition as well as its desire to be primarily residential. There were less than 10 permits issued in the remaining categories issued between 2013-2023.

The analysis of building permit trends also highlights how economic and demographic shifts have shaped development.

Development in North End/Soddy-Daisy reflects the rural character and the community’s preference for single-family residential, which prompts the need for continued land use planning. The area’s appeal lies in its natural beauty, recreational opportunities and expansive landscapes, attracting residents who prioritize rural, lake living, and mountain lifestyles.

The map on the following page (Figure 2.3) identifies the building permits that were approved over the last 10 years including single-family residential permits and other permits.

Chart 4: Permits by Area in Unincorporated vs. Incorporated Hamilton County.

- Permit Classifications shown are reflective of the anticipated growth pattern in Hamilton County and the categories selected in the Economic Analysis projections in the RCLCO study.

Building Permits Map

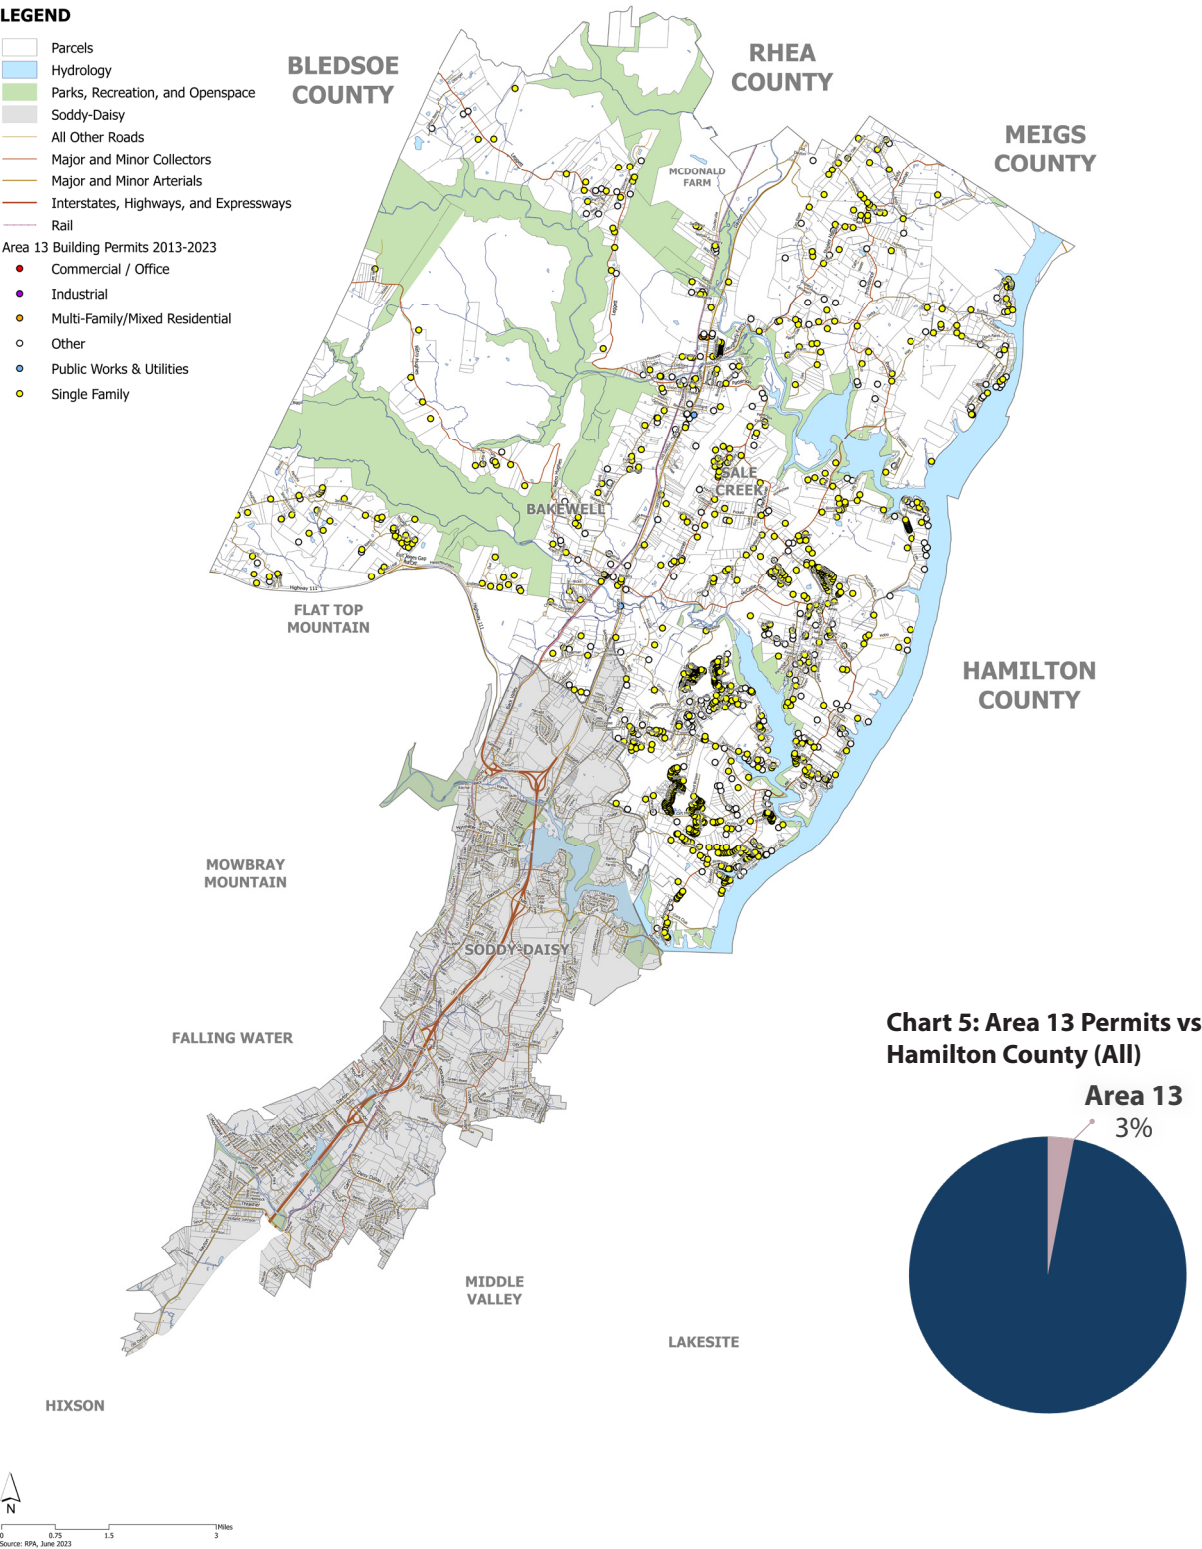

Figure 2.3: Building Permits Map (2013-2023)

2.5.2 RESILIENCY

Resiliency in the North End/Soddy-Daisy region is closely connected to the management of its natural resources, the development of parks and recreational spaces, and the strength of its infrastructure. As this area continues to grow, its future will be shaped by sustainable practices that protect key natural features such as rivers, forests, and open spaces—elements that are essential to the region’s ecological health and community character. Preserving and enhancing these natural assets, along with well-planned recreational areas, will be crucial for maintaining the quality of life for residents. Additionally, adaptable will play a critical role in supporting the community’s ability to manage growth and respond to environmental challenges. By integrating environmental stewardship with strategic infrastructure planning, the North End/Soddy-Daisy area can prepare for a future that respects its natural heritage while addressing the demands of the community.

NATURAL RESOURCES

The North End/Soddy-Daisy Area is rich in natural resources, featuring diverse water sources, parks, natural areas, and agricultural resources. These resources support local ecosystems and offer opportunities for recreation and sustainable development. Proper management of these natural assets is crucial for maintaining the region’s beauty and ecological health. The map (Figure 2.4) indicates points within the study area that feature natural resources deemed sensitive in terms of water function, steep slopes or habitat as identified in the adopted 2016 Comprehensive Plan for Hamilton County. In the North End/ Soddy-Daisy Area, 20.2% of the land is 25% or greater slope and 8.8% is in the 100-year floodplain. Waterways are shown to indicate the floodway and 100 year and 500-year floodplains along with Impaired Waterways (303D) which indicate water quality status based on monitoring of sediment, pollution (metals, pesticides/fertilizer run-off, etc.) and erosion or changes in flow/volumes. Development in the floodway is prohibited.

Area 13 is home to multiple creeks that flow from Walden’s Ridge to the Tennessee River. Possum Creek, Middle Creek, Rock Creek, Big and Little Soddy Creek, McGill Creek, N. Chickamauga Creek and Sale Creek all flow to the Tennessee River. The location and number of these creeks throughout the area result in flooding and create development limitations and infrastructure limitations.

Possum Creek

Natural Resources Map

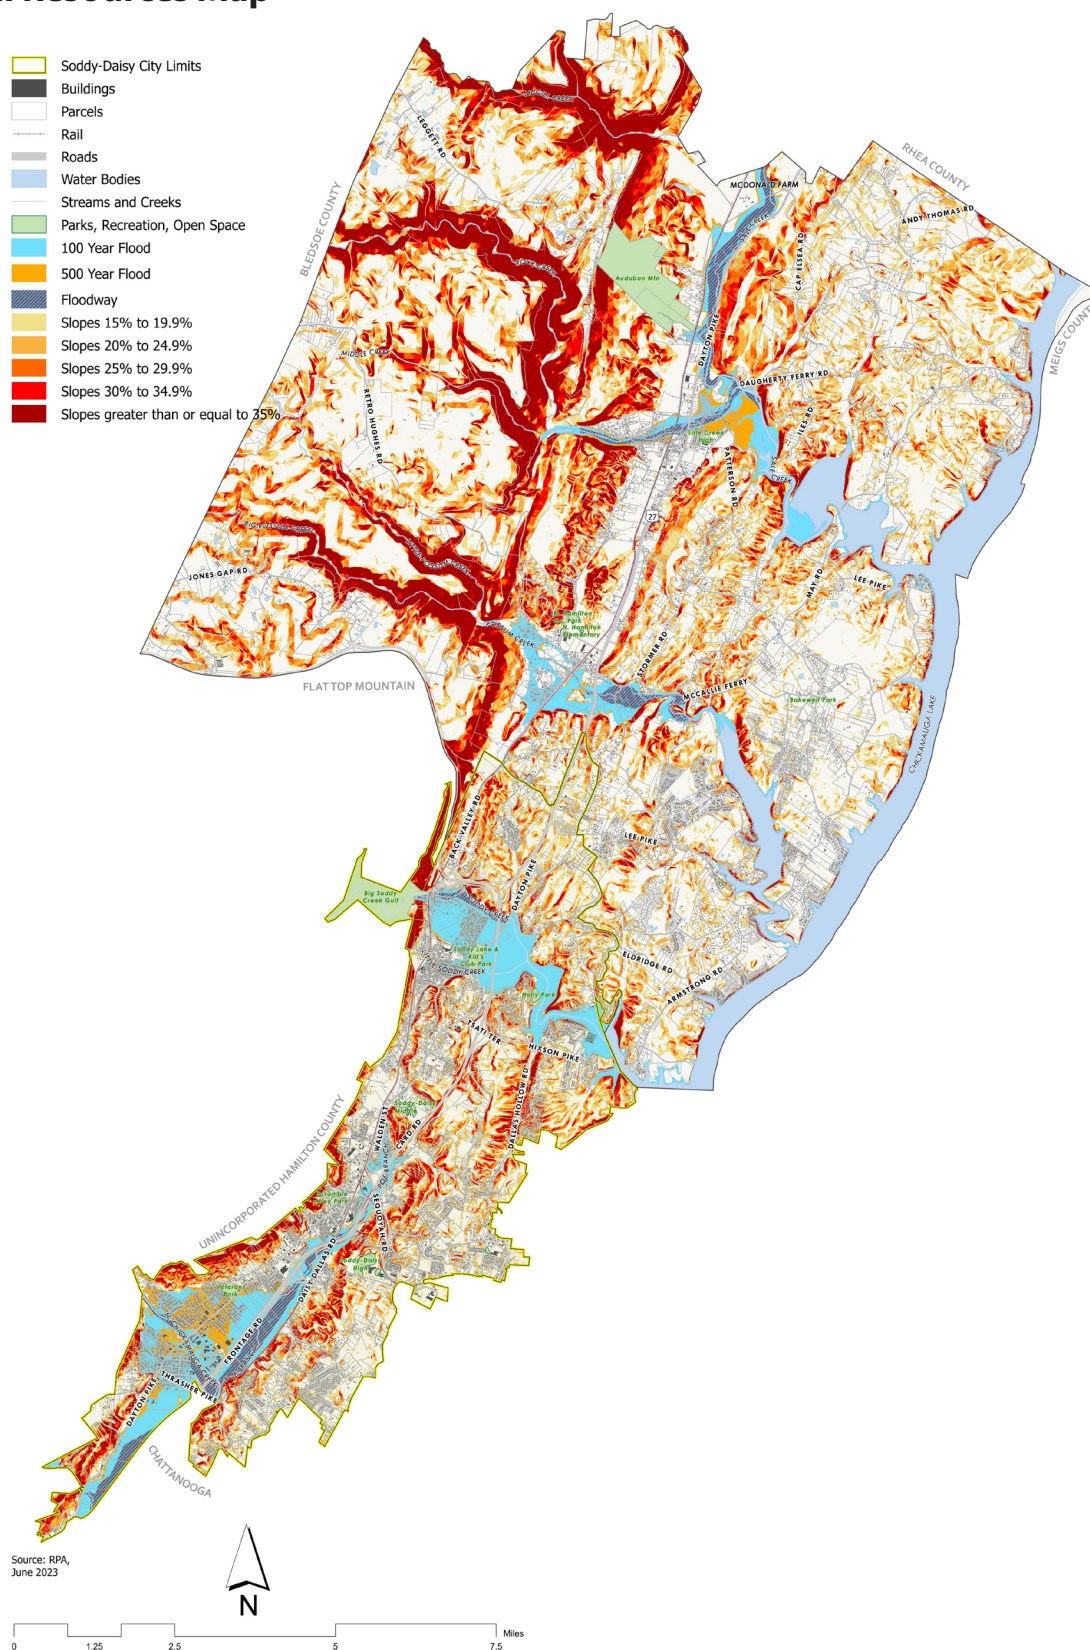

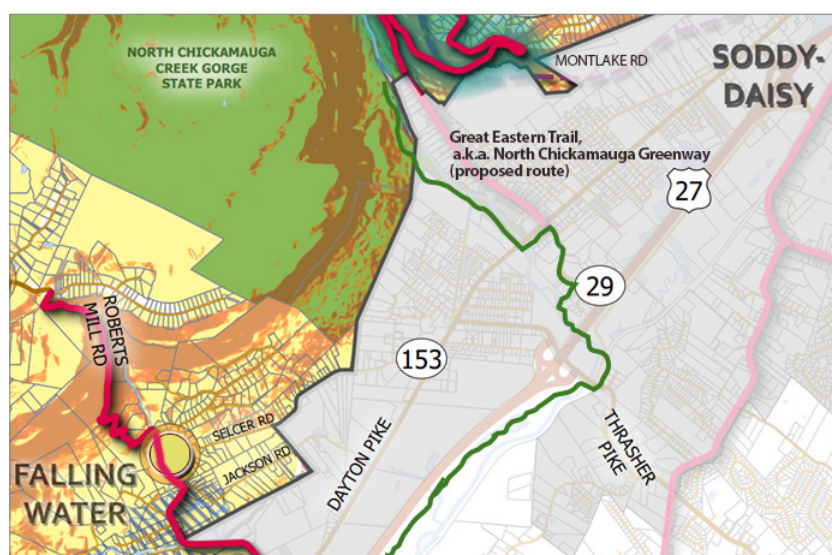

Figure 2.5: Natural Resources Map

With North Chickamauga Creek State Park, the Cumberland Trail, and a portion of John P. Wilson Cumberland State Park all located in Area 13, there are multiple opportunities to connect the communities of north Hamilton County as well as Lakesite, Red Bank, Hixson, Falling Water, Walden and Dayton. Additionally, expansion of the Great Eastern Trail network is underway providing connections in a broader, state to state context. This system of trails may provide access to public recreational facilities since the Area is well connected to Walden's Ridge's rock climbing, hiking, and biking trails, and water sport activities tied to the Tennessee River and local waterways.

Natural resource areas are often designated as public parks or open space that soon become tourist destinations.
Image Sources: RPA

AGRICULTURE

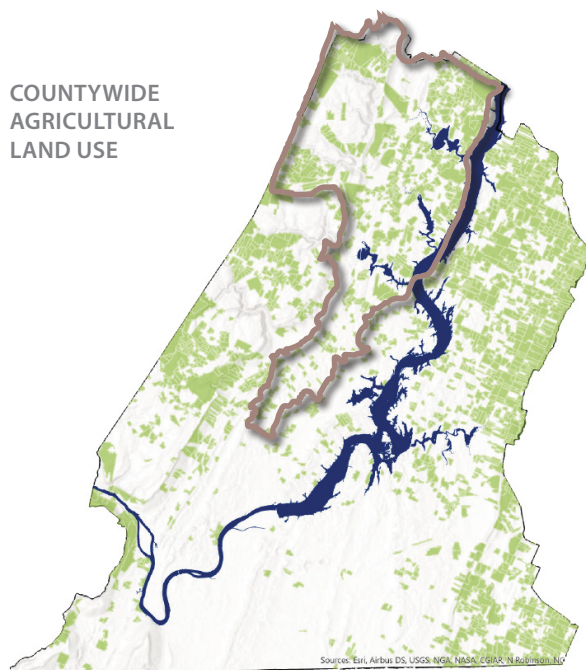

Hamilton County has a long history of agricultural activity in areas like Apison, Sale Creek, Flat Top Mountain, Georgetown and the Hwy 58/Birchwood area. A portion Area 13 consists of agricultural uses related to the production of crops, livestock, forestry uses and agricultural service businesses and may also include open fields, woodlands, and streams or lakes. Usually zoned as a A-1 district, they often include single-family homes on large lots as well as accessory buildings such as barns and greenhouses. Properties given the “Greenbelt” status (15 acres or more) usually feature a farm or single-family home with surrounding open space, pastures or forests retained and with tax benefits available. Development centered around farming is typically on septic systems. Agricultural uses in Hamilton County range from commercial businesses or large production facilities, such as a dairy or orchards, to horse stables, to roadside vegetable stands or feed & seed stores.

Not only do these agricultural uses add to the rural character of the area, but they also provide many benefits to the local community such as healthy food sources, educational programs, agritourism opportunities and improved environmental function for clean air and water quality - when significant vegetated areas are preserved and low impact farming practices (limited pesticide use or organic farming) are put in place. Programs that promote local agriculture and conserve open space and natural resources are readily available. Conservation practices may also include the use of clustered residential homes with farm amenities or scenic views and open space set aside. Another tool used to help preserve agricultural places and provide income includes special event facilities such as barns or pavilions, guesthouses or wedding chapels for instance.

PARKS, RECREATION & GREENWAYS

An analysis of the parks and recreation resources in the North End/Soddy-Daisy area of Hamilton County indicates that the region's natural assets are pivotal to the community's identity and quality of life. This Area has many public recreation spots including Bakewell Park, Big Soddy Creek Gulf, Mowbray Park, Sale Creek Recreation Area, Soddy Lake, Veteran's Park, and others. Additionally, Area 13 is in close proximity to large County and state parks in Areas 7 and 8. These spaces offer residents and visitors a variety of activities, from hiking and biking to picnicking, wildlife observation, etc. These spaces not only enhance the quality of life but also play a crucial role in preserving the region's natural landscapes and promoting environmental stewardship.

These green spaces serve a purpose beyond recreation. They are critical for environmental preservation, offering habitats for diverse wildlife and contributing to the overall health of the region's ecosystems. This preservation nurtures a sense of environmental stewardship, as the community becomes more connected to the land they enjoy. There is a total of 494 acres of official public recreation space and 23 acres of private recreation space in Area 8, as noted in Tables 3 and 4 on page 27, these green spaces play a crucial role in safeguarding the environmental integrity of the region. A separate analysis was conducted to measure the total approximate acreage for all aspects of parks, recreation, and open space which is approximately 17% of the total land area.

By prioritizing the protection of these landscapes, we ensure the continued survival of North End/Soddy-Daisy's biodiversity while also securing a legacy of natural beauty for future generations. Whether through careful planning or the community's growing engagement with these outdoor spaces, this Area seeks a balance between progress and preservation in maintaining the delicate ecosystems that define Hamilton County's identity.

Wastewater

Current capacity of the sewers is managed by the Hamilton County Water and Wastewater Treatment Authority (WWTA) with flows routed to the County's only treatment facility on Moccasin Bend many miles away. Currently all sewage in Hamilton County (including the incorporated areas) eventually flows to Moccasin Bend for treatment. A major overhaul of the Moccasin Bend facility is anticipated to be complete by the end of 2028. The main goal of this expansion is to add a Green Energy Program that increases processing from the existing 140 million gallons per day to 210 million gallons per day (Chattanooga.com; March 23, 2024).

Sewer availability and capacity is an issue throughout Hamilton County and the WWTA must consider both connection as well as capacity issues for any new development being considered. Area 13 has very limited sewer access except for one force main that leads from the City of Soddy-Daisy northward as shown in figure 2.5 on the following page. Steep slopes, rock or soil types may rule out sewers or make them prohibitively expensive. Sewer facilities and expanded lines are best justified in locations where high density housing is planned and in close proximity to existing lines. Other system technologies may be used in the more rural areas. Independent systems are available that include smaller scaled treatment facilities and, in some cases, pump stations.

Septic Systems

Due to sewer capacity and availability, septic is the most common wastewater treatment option in Unincorporated Hamilton County. Generally, the minimum lot size required for septic systems is 25,000 square feet. Residential development in rural areas without sewer service must therefore be built with these larger lots.

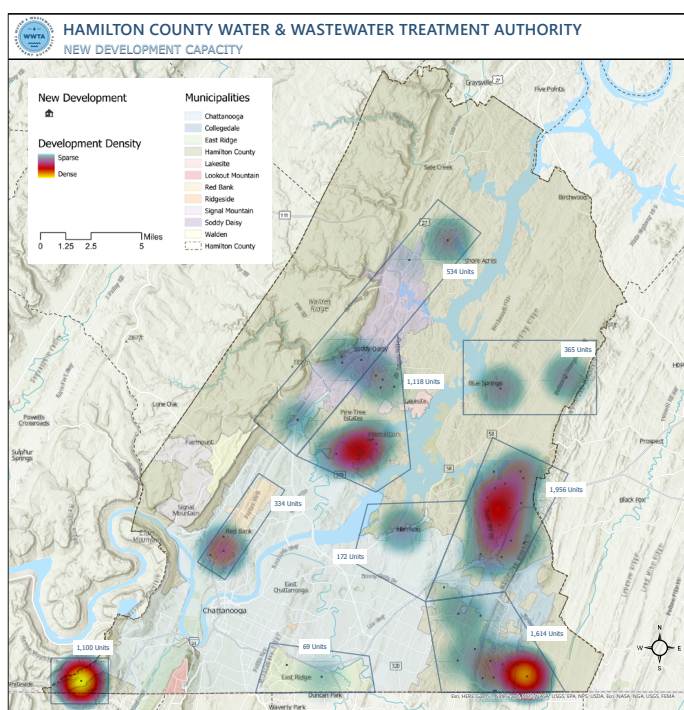

Information Highlight

Decentralized Wastewater Treatment Systems

A decentralized wastewater treatment system is like a combination of traditional septic and sewer. In a decentralized system, buildings or groups of buildings have a septic tank on-site as an initial treatment. Wastewater is then piped to a central location for additional treatment and disposal. Currently, Hamilton County only has a few examples of existing systems but anticipates them to become more common.

One key advantage in these systems is off-site disposal, which provides flexibility in housing types and helps preserve valuable open spaces. Additionally, centralizing the final stages of treatment and disposal reduces the risk of individual system failures, positively impacting the environment. WWTA provides oversight on these systems.

Note: If approved, these systems allow development to be approved at a density/intensity as if it were on sewer.

New Development Capacity (June 2023)

Sewer Infrastructure Map

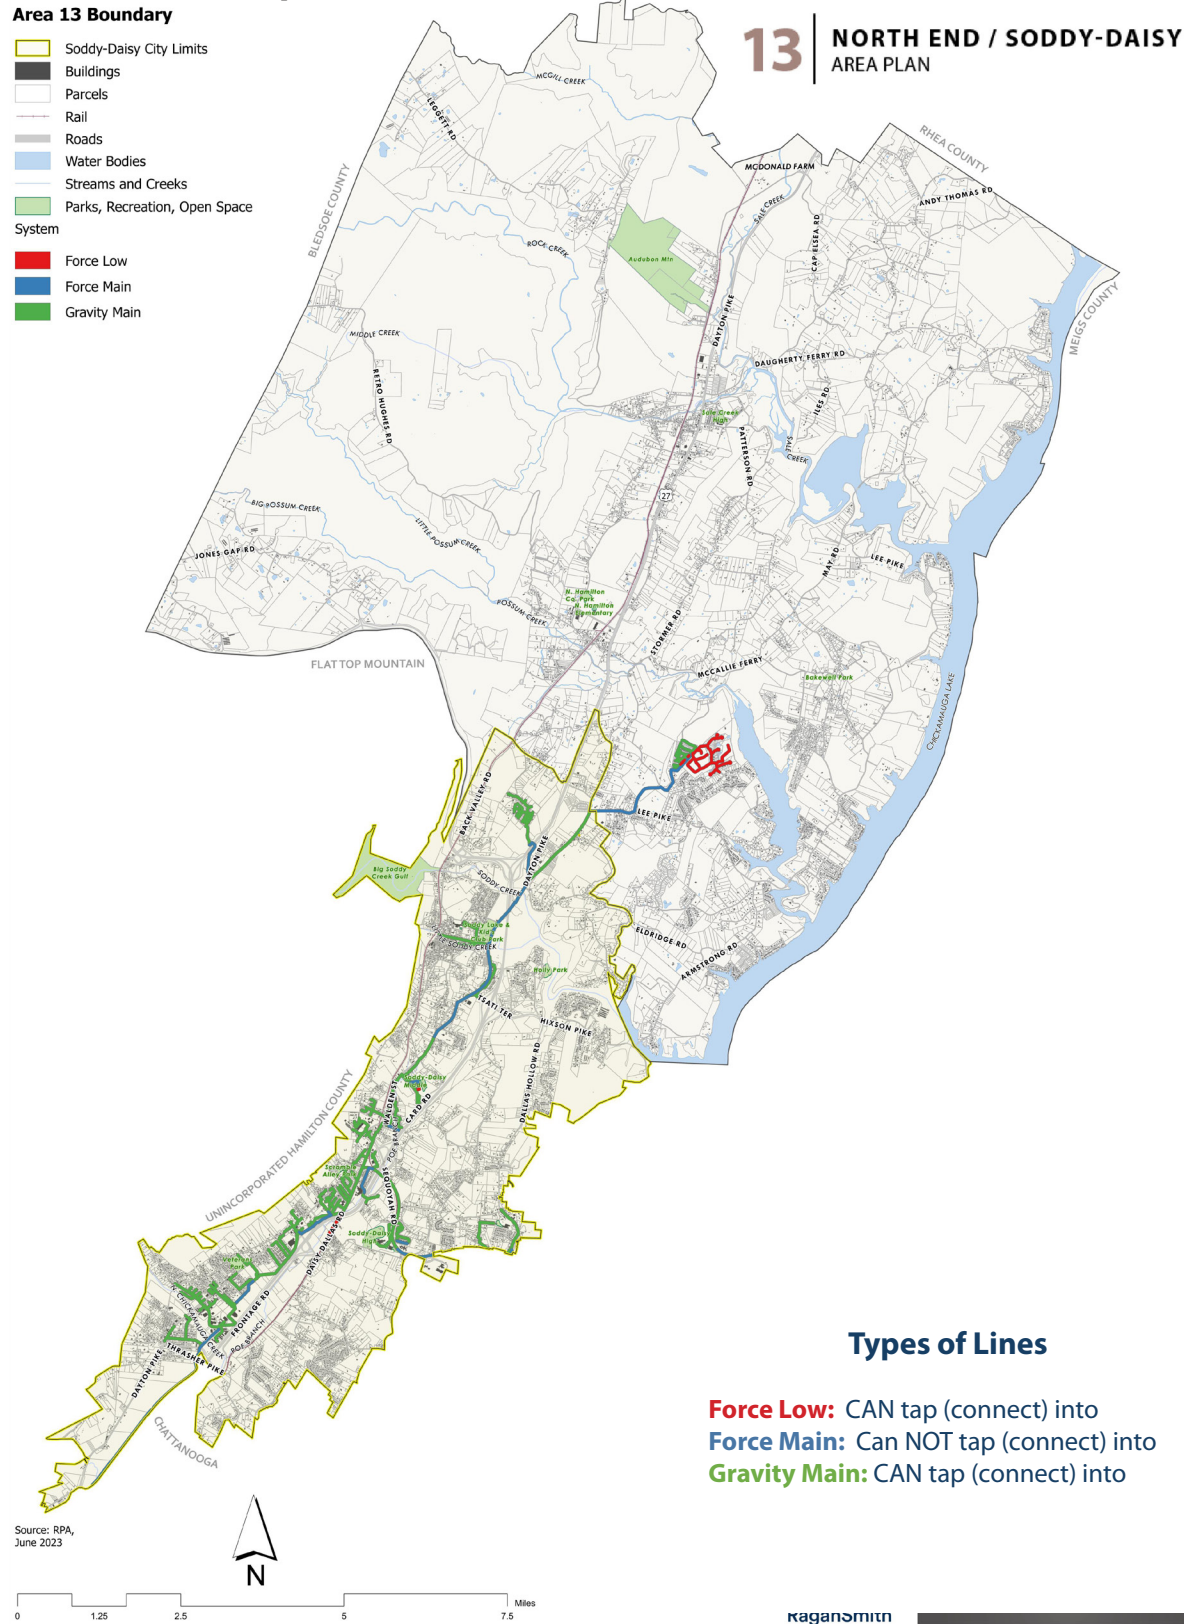

Figure 2.4: Sewer Infrastructure Map (2023)

FUNCTIONAL CLASSIFICATIONS

The Federal Highway Administration (FHWA) uses functional classification to “define the role each element in the roadway network plays in serving travel needs.” Roads are categorized by location (urban or rural), capacity, and alignment with future development plans. This classification system also differentiates between locally-owned, state-owned, and federally-owned roads, which can influence the funding sources and oversight agencies involved in roadway improvements. For example, improvements to state routes are generally proposed by the Tennessee Department of Transportation (TDOT) and the FHWA, with additional input from the Chattanooga-Hamilton County/North Georgia Transportation Planning Organization (MPO). This coordinated approach ensures that infrastructure upgrades align with both state and local priorities.

The functional classification categories at the local level in Area 13 are as follows:

- » Arterial
 - Principal Arterial
 - Minor Arterial
- » Collector
 - Major Collector
 - Minor Collector
- » Local Roads

Arterials

Arterials are classified based on their high level of mobility. Arterial routes are typically the longest and have higher capacity compared to the other roads in the transportation network. They have few access points and only connect to other Arterials within the network. Most travel that occurs on an Arterial is

over long distances, such as inter-state travel. Arterial routes typically account for the highest traffic volumes within the transportation network, but less than 15% of the physical transportation network. For example, Interstates consist of 3% of the vehicle miles traveled and between 17% and 38% of the vehicle miles traveled in a transportation network. Arterials are further classified as principal or minor arterials. Examples of Principal Arterials include interstates, freeways, and expressways. Minor arterials serve trips of shorter lengths than principal arterials connect smaller geographic areas to the transportation network.

Collectors

Collectors connect local roads to the arterial routes within a transportation network. They are shorter routes than arterials and have lower speed limits with more access points. Collector routes are typically used for intra-county travel rather than statewide travel like the Arterial routes. Collector routes make up approximately a third of the transportation network. Collector routes are further classified into major and minor collectors. Major collectors usually allow for higher levels of mobility within an area and minor collectors often have more access points. The distinction between major and minor collectors is often determined by speed limits, driveway spacing, and annual average traffic volumes.

Local Roads

Typically local roads account for less than 25% of the vehicle miles traveled but make up between 62% and 74% of the transportation network. They are usually characterized as having a low number of lanes, low speed limits, and low traffic volumes. Local roads are classified after the arterials and collectors have been identified within the network.

Crash Data Map

The transportation analysis of Area 13 reviewed functional classifications, traffic operations, and safety. Potential improvements were identified by analyzing historic and projected traffic volumes, crash data, and delay levels, with roads ranked by priority. Analysis did show anticipated capacity constraints along US27 and Thrasher Pike. Review of historic crash data identified Armstrong Road and McCallie Ferry Road as exceeding the statewide average crash rate based on the frequency and severity of crashes over the past three years. The historic crash data is shown on Figure 2.6.

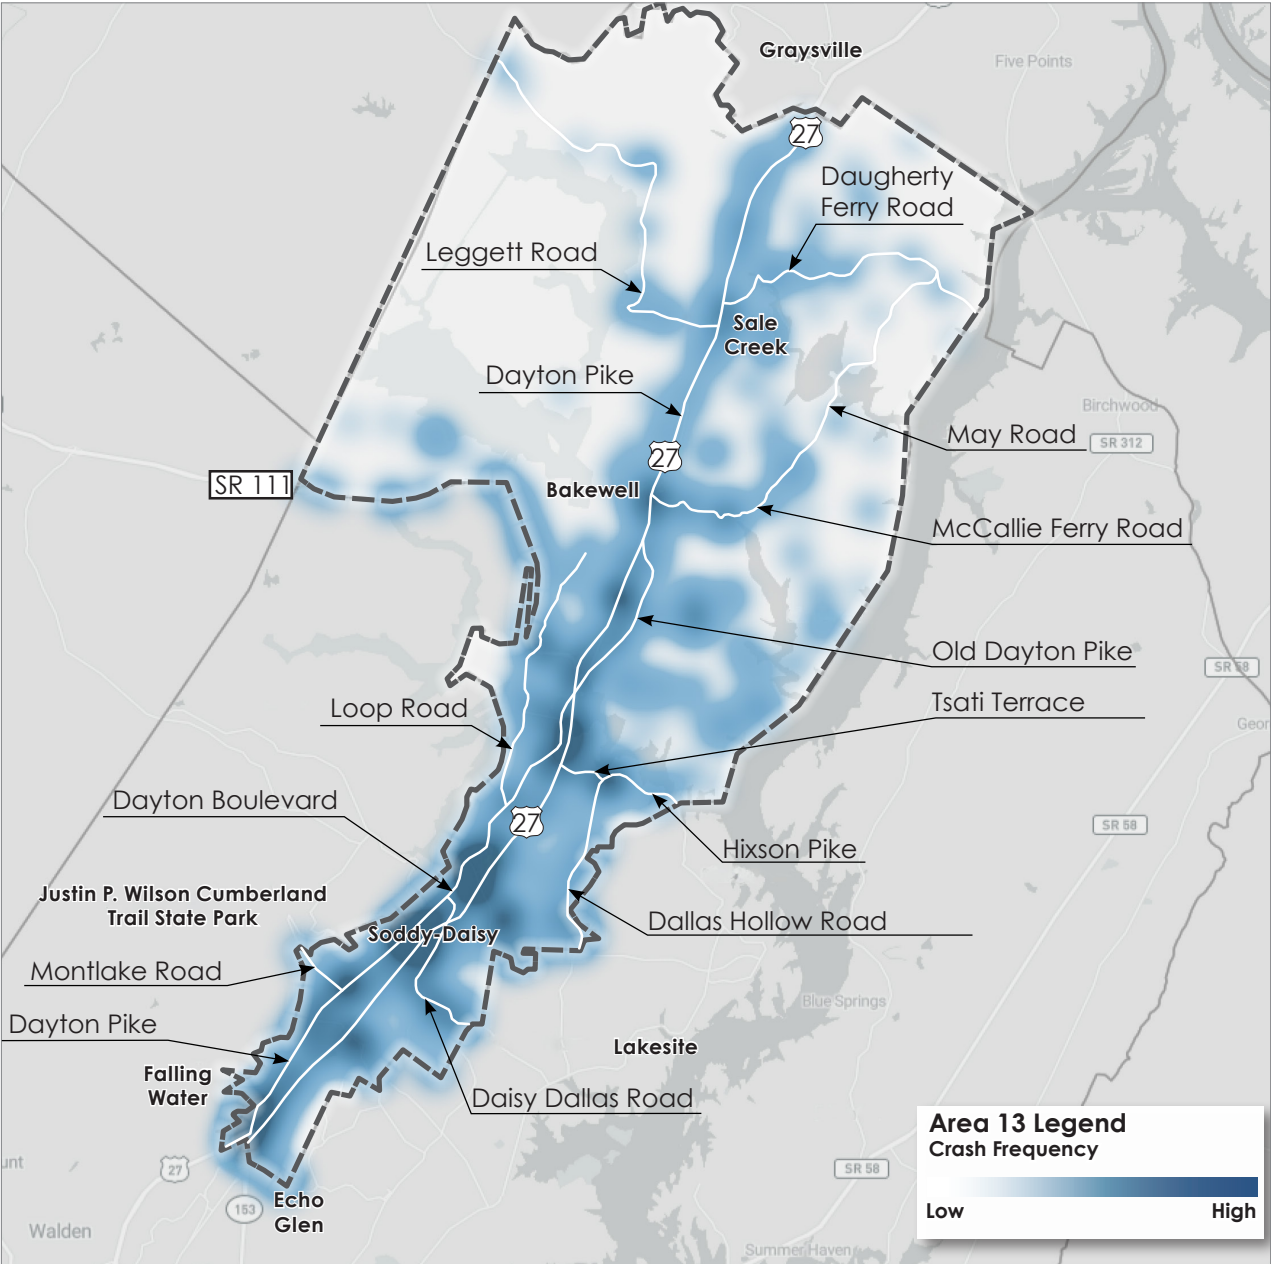

Figure 2.6: Area 13 Crash Data Map (08/24/2020 - 08/24/2023)

PROPOSED IMPROVEMENT CONSIDERATIONS

Roadway improvement considerations began with a thorough inventory and analysis of Hamilton County's existing roadway network. This initial assessment included a detailed review of traffic operations and crash patterns to identify potential safety enhancements. From this analysis, a list of roadway improvements was developed and organized by priority, focusing on areas that would benefit most from strategic upgrades.

To assess traffic operations, we used a combination of historical traffic count data collected annually, future traffic forecasts from the [RPA's 2050 Regional Transportation Plan](#), and general Level of Service (LOS) criteria. This approach allowed us to pinpoint current capacity constraints and anticipate areas likely to face similar issues as the County grows. Roadway segments already at or nearing capacity were flagged for inclusion in the improvement list to address these pressing needs.

The safety review analyzed three years of crash data across Hamilton County roadways to calculate crash rates on key segments. We then compared these rates to statewide averages to identify roads that might benefit from targeted safety studies or projects.

Table 5: Proposed Roadway Improvements (All Areas)

Priority Group	Roadway	Project Location	Area	Type of Improvement
Short-term	Hunter Road	at Lebron Sterchi Drive	9	Intersection
Short-term	Hunter Road	at curve near Crooked Creek Drive	9	Safety
Short-term	Hilltop Drive	between Hunter Road and Volkswagen Drive	9	Extension
Short-term	Hunter Road	from Hwy 58 to Lee Highway	9	Safety
Short-term	Standifer Gap Road	from Banks road to Camp Road	12	Safety
Short-term	Daisy Dallas Road	from Harrison Lane to Hixson Pike	8	Safety
Short-term	Middle Valley Road	from Hixson Pike to Daisy Dallas Road	8	Safety
Medium-term	Middle Valley Road	at Daisy Dallas Road	8	Intersection
Medium-term	Middle Valley Road	at Walnut Road	8	Intersection
Medium-term	Middle Valley Road	at Gann Road	8	Intersection
Medium-term	Hunter Road	at Garfield Road	9	Intersection
Medium-term	Roberts Mill Road	from Dayton Pike to Mountain Laurel Trail	7	Safety
Medium-term	Snow Hill Road	from Mountain View Drive to Mahan Gap Road	9	Safety
Medium-term	Snow Hill Road	from Mountain View Drive to Amos Road	9	Capacity
Medium-term	E Brainerd Road	at London Lane	12	Intersection
Long-term	Hunter Road	from Hwy 58 to Lee Highway	9	Capacity
Long-term	Standifer Gap Road	at Bill Reed Road	12	Intersection
Long-term	Armstrong Road	from Hixson Pike to Lee Pike	13	Safety
Long-term	Harrison Bay Road	from Hwy 58 to Birchwood Pike	9	Safety
Long-term	McCallie Ferry Road	from US 27 to Spradling Road	13	Safety
Long-term	Gann Road	from Middle Valley Road to Daisy Dallas Road	8	Safety
Long-term	Montlake Road	from Dayton Pike to Mowbray Pike	7	Safety
Long-term	W Road	from Mountain Creek Road to Anderson Pike	7	Safety

MPO Planned Transportation Projects Map

Average crash rates for the entire state of Tennessee were used for comparison to identify roads that might benefit from a safety study or project that would identify detailed crash patterns or implement improvements or strategies that could reduce the number or types of crashes. Two roads within Area 13 were identified as candidates for safety projects including McCallie Ferry Road and Armstrong Road. There was one fatality noted in the crash history of Armstrong Road.

Projects (Considerations for future investments)

■ Principal Arterials

US-27 from County Line to SR-111
Tsati Terrace Hixson Pike from Dallas Hollow to Armstrong Rd

■ Minor Arterials

US-27 from SR-111 to Hwy 153
Durham St & Dayton Pike
Dallas Hollow Rd from Tsati Terrace to Sequoyah Access Rd
Thrasher Pike from Dayton Pike to Gann
Daisy Dallas Rd from US-27 to Lovell Rd

■ Minor Collectors

ShIPLEY Hollow Rd, Daugherty Ferry Rd, Patterson Rd, Stormer Rd, May Rd, McCallie Ferry Rd, Lee Pike, Lovell Rd, Mowbray Pike, Armstrong Road, Montlake Road Gann Rd from Daisy Dallas Rd to Thrasher Pike

Figure 2.7: Area 13 TPO Planned Transportation Projects Map

2.5.4 COMMUNITY FACILITIES

The North End/Soddy-Daisy offers a comprehensive array of community facilities designed to enhance the quality of life for its residents. These facilities include educational institutions, healthcare centers, libraries, and recreational amenities. Each facility is integrated into the community to ensure accessibility and to meet the diverse needs of the population.

SCHOOLS AND MAJOR INSTITUTIONS

It is imperative that Hamilton County Schools be part of the conversation when it comes to growth in the Sale Creek Area. New schools tend to attract new growth in the form of residential development. As the area continues to grow, schools may approach, or exceed, capacity due to increasing student enrollment. Factors such as transportation, access, and space needed for buildings, parking, and recreation must be considered as new schools are planned.

Hamilton County Opportunity 2030 Strategic Plan

Hamilton County Schools introduced a seven Year Strategic Plan [“Opportunity 2030”](#) to engage stakeholders and align strategies to directly respond to the needs of the students, staff, and the community.

HCDE’s mission is:

To equip students with the knowledge, skills, and supports to thrive in life.

HCDE’s vision is:

By 2030, Hamilton County Schools will be a leader in developing our diverse graduates to be connected, competitive, and life ready.

The HCDE 2030 plan has made 5 commitments:

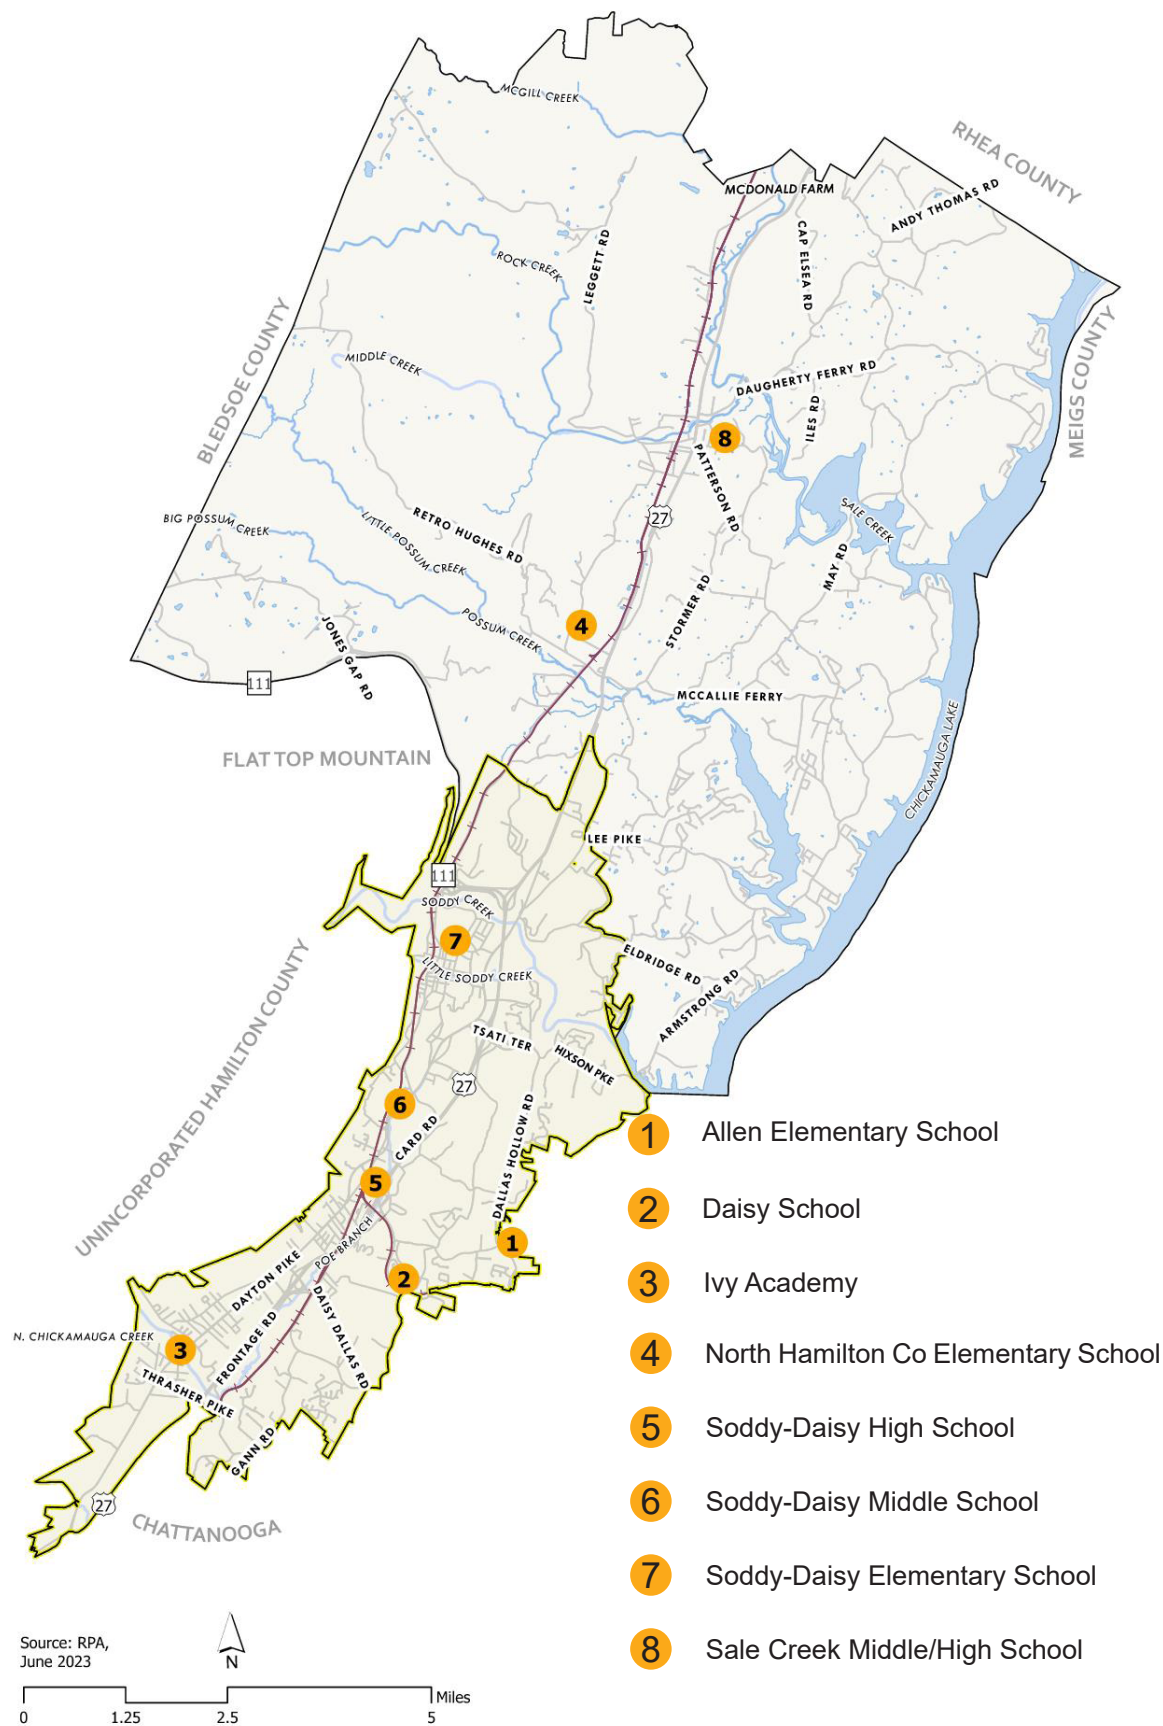

1. Every Student Learns
2. Every Student Belongs
3. Every School Equipped
4. Every Employee Valued
5. Every Community Served

In 2024, the County established 250 million in bonds in anticipation of upcoming school needs.

Hamilton County is home to many private and public K-12th Grade institutions and colleges, the following is a Countywide total of all schools and students:

Schools Map

PARKS & GOVERNMENT OWNED LAND

There are many parks and recreational areas in North End/Soddy-Daisy. These areas are a recreational asset that draws hikers, bikers, horse riders, and campers from all over. There is approximately, 494 acres of public parks, recreation, and greenways within Area 13 for the enjoyment of residents and visitors. There is also a portion of John P. Wilson Cumberland State Park in Area 13 on the northwest corner which presents opportunities to connect to the Cumberland Trail network.

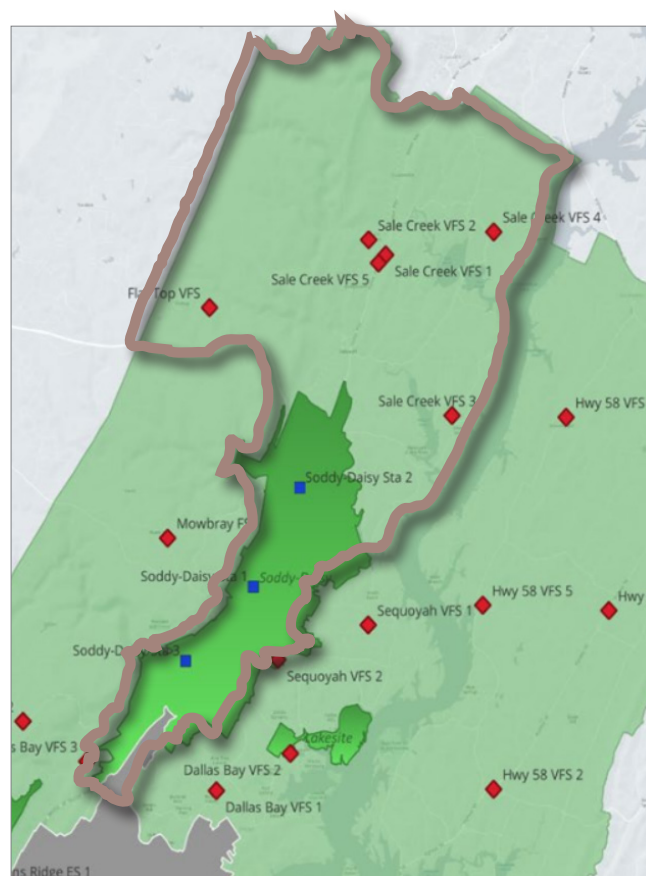

Access to public recreational facilities, hiking and biking is well connected to Walden's Ridge in Area 13. However, the remainder of Area 13 is lacking public open space, preserve areas, greenways, sidewalks, and other outdoor public recreational amenities.

EMERGENCY SERVICES

In 2024, Tri Star conducted a [Fire and Emergency Response Evaluation](#) of the unincorporated areas to identify current levels of fire protection service, geographic coverage, response time, areas of need, etc. Within Area 13, there are six (6) volunteer fire departments (VFD) including Sale Creek VFD 1,2,3,4, and 5 as well as Flat Top VFD. Additionally Soddy-Daisy FD 1,2,and 3 are located within their jurisdictional boundary within Area 13. The stations are distributed throughout the area and the report did not identify any gaps in coverage. Sale Creek VFD 1,2, and 5 are in close geographical distance to one another at the base of Walden's Ridge. The report did however, identify that the Highway 58 VFD's served the 2nd least populous Area in Hamilton County with an estimated population of 21,127 including the incorporated limits of Soddy-Daisy, the service population of the unincorporated area is estimated at 7,997. As growth continues, it will be necessary to continue to evaluate emergency service and response and improve accordingly.

Hamilton County Emergency Management owns and constantly updates evacuation routes and plans for natural disasters.

CHAPTER 3

COMMUNITY VISION & GOALS

- INTRODUCTION
- 3.1 COMMUNITY FEEDBACK
- 3.2 GOALS
- 3.3 VISION STATEMENT

Shaping a vision for the future of the Walden Plateau involves exploring its potential and engaging with residents and business owners to understand their aspirations for the next decade. What qualities do people value? What elements make this Area unique or special? To identify these community values, two surveys were distributed during the planning process. During public meetings, participants were invited to identify issues and prioritize potential solutions. While some concerns were specific to particular sub-Areas, many were relevant to the entire area.

The initial feedback produced four key [Community Themes](#) which ultimately outlined the analysis portion of this plan. Those key themes helped shaped the remainder of this plan and are identified in Chapter 2 of this plan.

Survey responses, input from community meetings, feedback from the Advisory Committee, and professional guidance from staff and technical advisors, were used to draft goals, a vision statement, and recommendations to reflect the shared values of the Northeast County community to establish a direction for the future.

A community's **GOALS** form the foundation of its identity and guide its actions and decisions. They identify the driving forces of the community, by adhering to these core goals, the community fosters a sense of unity and purpose, enabling all members to work together towards a common vision of a prosperous and harmonious future.

A **VISION STATEMENT** outlines the collective aspirations and core values of the community. It serves as a guide, highlighting the community's desired future and setting a clear direction for growth and development. Crafted through collaborative input, the vision statement emphasizes key principles such as preservation, recreation, infrastructure, housing, and overall quality of life.

Public Meeting
Source: RPA

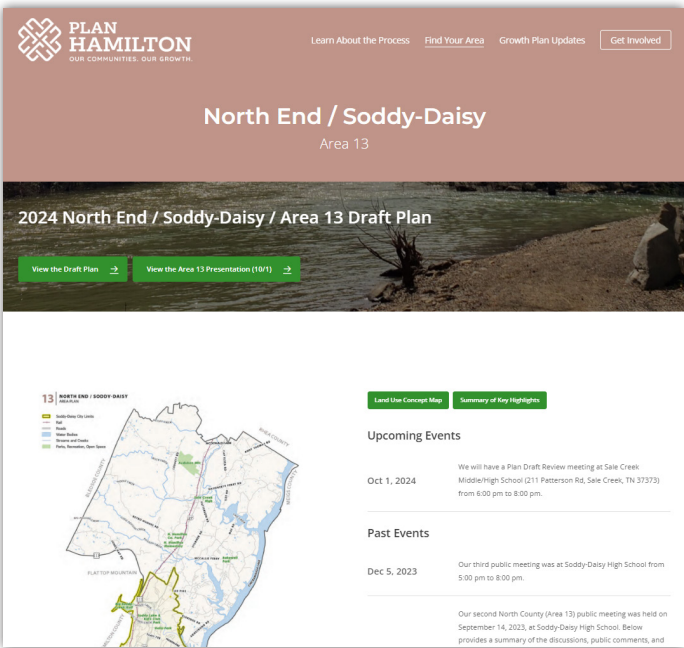

3.1 COMMUNITY FEEDBACK

Community feedback is crucial in creating an area plan because it ensures that the voices of those who live, work, and play there are heard and valued. The residents have an intimate understanding of the unique challenges and opportunities within their community, providing insights that outside experts might overlook. Engaging the community fosters a sense of ownership and collaboration, making the planning process more inclusive and transparent. By incorporating diverse perspectives, we can create a more comprehensive and effective plan that reflects the true needs and aspirations of the people it serves. Ultimately, community feedback ensures that the final plan promotes sustainable development, enhances quality of life, and preserves the distinctive character of the Middle Valley / Lakesite.

Public input is vital to the success of any planning process and in the area planning process for Hamilton County. Understanding the perspectives of those who live and work in a community every day provides invaluable insights to experts developing concepts and recommendations. Several opportunities were offered for the public to share their thoughts and feedback in various formats with the goal of developing a shared vision. This section outlines the engagement efforts of each event

Plan Hamilton Landing Page

Area 12 Website
Source: RPA Website, <https://planhamilton.org/north-end-soddy-daisy/>

COMMUNITY MEETINGS

The following outlines the public meetings held to provide a platform for the community to express concerns, share priorities, and offer feedback on the proposed strategies within the Area Plan. Through an analysis of the themes and perspectives that emerged, this section highlights the key issues raised by participants. Input from these meetings plays a crucial role in shaping the recommendations, ensuring the Area Plan aligns with the community's needs and values.

KICK-OFF

In August 2023, a kick-off meeting took place at the Sale Creek Fire Hall. The goal of the first meeting was to introduce to the purpose of Area planning as well as the process as a whole and gather initial feedback from the community. A summary of the input received at the kick-off meeting is included in [Appendix D](#).

PUBLIC MEETING #2

In September 2023, the second public meeting was held at Soddy-Daisy High School. The goal of this meeting was to not only update the community on the process but to understand the community vision so that was the forefront of the Area planning process before the documents were created.

PUBLIC MEETING #3

In December 2023, the third public meeting was held at Soddy-Daisy High School. The goal of this meeting was to update the community on the progress of the Area planning process before the documents were created.

PUBLIC OPINION SURVEY

In addition to in-person engagement, we conducted a comprehensive public opinion survey from August 2023 through October 2023. This survey covered a wide range of topics, including recent and current development, future development, environmental issues, and mobility. The valuable insights gained from the survey are included in [Appendix C](#).

ONLINE INFORMATIONAL MEETINGS

Two Countywide informational meetings were held online by the RPA in January of 2024 to discuss 4 topics with the public including: Traffic & Transportation, Commercial Centers & Corridors, Housing, and Parks & Greenways.

Draft Plan Meeting

In October 2024, a draft Area Plan meeting was held at Sale Creek Middle / High School. The goal of this meeting was to present the 75% draft version of the Area 13 plan to the community and for the RPA to provide an update of the overall process, how the plan addresses community concerns, and how this plan will guide growth moving forward.

COMMUNITY SURVEY RESULTS

**Commercial uses and services most needed:**

1. Food & Beverage
2. Grocery
3. Leisure / Entertainment

**34%**

Experience mild congestion during peak rush hours

**The top 3 infrastructure investments needed:**

1. Roads
2. Parks, Greenways & Open Space
3. Schools

**Civic uses and services most needed:**

1. Trails, Greenways & Sidewalks
2. Parks & Open Space
3. Pool or Recreation Center

**Type of Commercial Development the community would support:****67%**

Neighborhood Commercial

38%

Mixed-Use Commercial

WHAT DID WE HEAR?

"Programs to educate the public, developers, and decision makers about the North Chickamauga Creek and its presence and its value to our community"

"Maintain rural feel"

"Concerned about emergency services and fire protection, dependent on volunteer service"

"A running / walking / biking trail is needed in the Soddy-Daisy Area"

"Preserve family farms and rural land"

"Inter-modal or multi-modal services for meeting our transportation needs"

"Establish a trail head for the Cumberland Trail at McDonald Farm"

"Develop a public park for McDonald Farm"

3.2 AREA PLAN GOALS

These seven general Area plan goals apply to all five unincorporated Areas and create a blueprint for balanced and sustainable growth in Hamilton County, enhancing its unique character and natural beauty. These goals are based on the four Community Themes established in Chapter 2 including Land Use and Development Character, Resiliency, Transportation and Mobility, and Community Facilities.

By focusing on strategic growth management, we aim to harmonize new development with existing community values and landscapes, fostering economic vitality while preserving the charm of our neighborhoods. Our commitment to conserving natural resources ensures

they are protected and enhanced for future generations, promoting sustainable practices. Providing diverse and affordable housing options is essential for an inclusive and thriving community. Ensuring housing meets the needs of all residents supports a diverse population and fosters socioeconomic stability.

By addressing these interconnected goals, Hamilton County is committed to creating a resilient, vibrant, and sustainable future that enhances the quality of life for all residents. Each goal is paired with specific policy recommendations and strategies to ensure successful implementation and long-term benefits for our community.

3.3 VISION STATEMENT

As we look toward the future of the unincorporated areas of Hamilton County, we aim to craft a vision statement that captures our shared aspirations and values. This statement isn't just a list of goals; it's a reflection of our dedication to honoring our rich heritage while embracing sustainable growth. We are committed to enhancing the quality of life for all residents through thoughtful development, preserving our natural resources, and

fostering economic opportunities. By engaging in collaborative and transparent planning, we will build resilient, connected, and thriving neighborhoods where everyone can live, work, and prosper together for generations. This vision statement will serve as our guide, illuminating the path toward a vibrant and inclusive future for Hamilton County's unincorporated areas.

To create vibrant and SUSTAINABLE communities that honor our heritage while embracing growth. We aim to ENHANCE QUALITY OF LIFE by promoting THOUGHTFUL DEVELOPMENT, preserving NATURAL RESOURCES, and fostering ECONOMIC OPPORTUNITIES. Through collaborative and transparent planning, we will build RESILIENT, CONNECTED, and THRIVING NEIGHBORHOODS where everyone can live, work, and prosper together for generations.

CHAPTER 4

PLANS, POLICIES & RECOMMENDATIONS

- 4.1 PLANNING OVERVIEW
- 4.2 PLACE TYPES
- 4.3 POLICIES

4.1 PLANNING OVERVIEW

The CHCRPA draws on a wide range of resources to determine the most suitable land uses within Hamilton County. While standard practices such as zoning often guide these decisions, it's crucial to recognize that the rich history of our neighborhoods and the specific desires and needs of the community extend beyond these conventional frameworks.

This chapter outlines the three key steps in the planning process used as part of the comprehensive planning effort. The primary aim of these steps is to prioritize community character, ensuring that each area's unique identity and needs are at the forefront of decision-making. While these steps prioritize the preservation of each area's identity, it's important to note that they operate alongside public input and community programming integrated throughout the process. By leveraging distinct planning models,

the RPA has developed Place Types that cater to the specific conditions of each of the unincorporated areas within Hamilton County. The process begins with a thorough understanding of each area's unique characteristics and needs. These Place Types serve as a foundation for developing customized conditions and recommendations. The final step involves formulating specific Policies, which provide best practices for implementing the earlier planning stages.

The RPA's approach is uniquely multi-layered, incorporating best management practices tailored to the needs of each individual Area. This method ensures that land use decisions are not only guided by standard practices but also by a deep understanding of local contexts, resulting in a planning process that is responsive to the diverse needs of Hamilton County's communities.

#1

PLANNING MODELS

The RPA and their consultants have developed Countywide Growth Capacity Modeling to show current trends. This influenced the Centers and Corridors approach to planning which is graphically displayed in the Conceptual Land Use Map. These maps identify Centers, Corridors, and general land use determinations in advance of Place Type mapping that were informed by community feedback, existing policy, existing code, proposed policy and Place Types, as well as general community character.

#2

PLACE TYPES

The RPA has created a palette of 23 Place Types to describe the various uses, forms, and character that development can take throughout the County, and its jurisdictions. The section identifies how they are used and which ones exist in Area 7. The RPA's Place Types Matrix addresses a range of contexts from most urban to most rural based on the transect model. Each Place Type policy includes a general description, real-world examples, recommended land uses, guidance on intensity and form, mobility, and infrastructure.

#3

POLICIES

The policy recommendations are inspired from the 4 Community Themes which created the 7 Goals for Unincorporated Area Plans. Each Area Plan will have customized Policy Recommendations based on the community's character, needs, land use, zoning, Place Types, planning models, etc. The policy recommendations are intended to be a guide for implementation at the regulatory level and create a standard by which this document is regulated.

CENTERS AND CORRIDOR APPROACH

The Centers and Corridors Approach is a land development strategy that the RPA has developed to address growth and redevelopment throughout Chattanooga and Hamilton County and which will influence this plan's recommendations. It has three essential concepts:

- » Walkable, clustered Centers where retail uses are concentrated.
- » Corridors comprised of a mix of uses when in suburban areas or with deep setbacks to preserve rural character.
- » Medium and higher density housing near Centers and Corridors to support their economic vitality and local transit viability.

*This approach addresses the plan's seven Goals and the **community's preferences**:*

1. Complete Communities

A mix of housing types in close proximity to centers and corridors gives residents convenient access to daily needs, employment, recreation, and transportation options.

2. Connected Communities

Connected communities enable walking, biking, and transit options, all of which depend on a mix of uses in close proximity. Concentrating businesses in Centers and at key locations along transit Corridors makes these alternate transportation modes more feasible, helping to reduce congestion.

3. Healthy Communities

Communities, where active transportation options and public greenways and parks are available, tend to be healthier: Proximity to these amenities allows people to recreate and get around by providing the built environment to do so.

4. Safe Communities

The Centers and Corridors Approach promotes more eyes on the street, by locating buildings up to the sidewalk, animating the street edge with doors and windows, and more frequent pedestrian activity. Corridors with sidewalks, street trees, and bike lanes promote safe and efficient movement for all users of the street, including motorists, transit users, bicyclists, and pedestrians.

5. Unique and Attractive Communities

Place Types emphasize form and character which helps preserve and foster distinctive and memorable places. Due to changes in commercial corridors throughout the County having vacancies, new opportunities are presented for multi-family housing providing redevelopment opportunities for more compact site planning, smaller tenant spaces suited to local businesses, and integrated attached single-family and multi-family. This can ; increase profits for businesses, reduce traffic and congestion related impacts, and help to preserve the character of existing single-family neighborhoods consistent with input from local residents.

6. Economically Vibrant Communities

Given finite government resources, the Centers and Corridors approach helps prioritize where City resources are invested. Walkable, compact Centers have significant economic impacts for the County Centers require a certain number of households within a given proximity (depending on their size) in order to sustain businesses. Businesses also tend to be more successful in Centers where retail, services, and housing are all clustered in a compact, walkable environment. Also, compact development yields more tax revenue per acre than dispersed development, thus contributing to the overall wealth and economic vitality of the area.

4.1.2 CONCEPTUAL LAND USE MAP

The conceptual land use map is intended to identify the high-level areas for initial recommendations to inform the place type mapping. The Conceptual Land Use Map is illustrative, whereas the Place Types Map defines development patterns and set policies for future growth. These Concept maps were created early in the process to identify potential major Centers and Corridors, Resort/Recreation, Special Districts and Residential. The purpose of these maps is to provide guidance to residents, development interests, utility providers, planners, and County leadership on what areas should be primarily preserved in their current form with incremental growth and where new growth should be planned for to support economic opportunity and a balance of services across the County. The Conceptual land use maps also identify areas with challenging topographic or hydrologic constraints, existing agricultural use, locations of regional facilities, and recreational assets. While parcel size and density was considered this map is generalized to highlight projected trends and opportunities and to provide guidance on where public and private sector investments are most warranted.

Centers & Corridors

Centers and Corridors are planned considering a variety of factors including utility infrastructure capacity, transportation factors, proximity to schools and emergency services, environmental conditions, recreational access, housing opportunities, and access to commercial services. Centers provide the opportunity to integrate commercial services into our neighborhoods in a predictable manner with accompanying infrastructure investments and site considerations.

Corridor designations have been applied in rural areas to indicate opportunities to preserve rural landscape, views, and development patterns, consolidate points of access to primary roadways, limit congestion, and to protect rural lifestyles. In suburban settings, corridors are utilized to demonstrate primary transportation corridors that will experience continued development pressure and warrant access management improvements.

Residential

Residential place types are the places (outside of centers and corridors) that make up the neighborhoods we call home. They can be urban or rural, vertical and dense, or secluded retreats and are the building blocks of most traditional neighborhoods and modern suburbs.

Center Example
Source: Continuum

Rural Corridor
Source: RPA

Residential Cont.

When a community wants to incorporate space for a school, a corner restaurant or coffee shop, a convenience store, an accountant's office or even a care facility for elderly family members; the residential Place Types may not accommodate these uses. This is the reason for the variety of scale and intensity of Centers which may be used to complement residential areas to provide for daily needs services and a place for mixed residential units. This approach protects single-family residential areas and provides for a more complete community.

Resort/Recreation

Resort Recreation Centers are introduced in this plan as a specialty district place type. Hamilton County has a wealth of recreational assets from highly programmed parks, to blended park-preserves such as Enterprise Nature Park, to traditional passive use natural areas and preserves. These special use areas have all found a place in the hearts of recreation enthusiasts as varied as league sports athletes, paddlers, fitness walkers, bird watchers, runners, cyclists, nature photographers, and neighborhood residents looking for a safe quiet walk. Not as readily recognized has been the economic potential of these assets and the user groups who love them. Working from community and stakeholder input locations have been identified where commerce can be sustainably integrated with recreation to provide jobs, tax base, and income while enhancing and preserving our community recreational resources.

Specialty Districts

Specialty Districts are used to designate the places that form the fabric of our community. They may not be where we live or shop but they house many of the other essential resources we require to thrive in modern society. These include the campuses where our children attend school, the land and facilities that produce our food, power our utility grids, clean our water, house our medical and emergency response facilities, build our communities, and manufacture the products we utilize every day. In many cases, this means they are also our places of employment.

Figure 4.4: Conceptual Land Use Map

4.1.3 FUTURE DEVELOPMENT OPPORTUNITIES

A primary growth strategy for Area 13 is to promote sustainable resort and recreational center developments capitalizing on these assets to create jobs, tax revenues, and focus transportation and utility investments. Specific recommendations are as follows:

Source: RPA

Special Districts:

- » McDonald Farm has been identified as a Regional Opportunity Area. The vision for short- and long-term use of the property should be driven by a combination of careful market / economic evaluation, analysis of infrastructure costs for various uses and return on investment, and community dialog with taxpayers and residents.
- » The County purchase of the McDonald Farm offers potential for property investments to serve a wide range of potential community needs from community event and park space to recreational tourism, agricultural commerce and heritage, lodging, residential growth, and job creation. Featuring the agricultural heritage of the property and creating public access to the natural beauty of the property and surrounding area should be included in future plans.

A study is underway for the McDonald Farm site. Above is an early concept diagram that notes a mix of uses may be possible for the area, with conservation of the agricultural and open space qualities serving as a guiding theme.

Image Source: Ragan Smith

Resort/Recreation:

A Resort Recreation Center should be encouraged near Mowbray Pike / Montlake Road serving as a hub for North Chickamauga Creek State Park, the Cumberland Trail, climbing, hiking, and paddling assets. Support the addition of lodging, cabins, camping, trailhead facilities, and new hiking and biking trails.

Centers:

- » The crossroads communities of Sale Creek and Bakewell have been the traditional centers of local commerce, faith, and culture. These communities should continue to be augmented and be the focal point for growth in Area 13 as infrastructure allows. Growth in both areas is currently limited by utility infrastructure. However, the presence of existing businesses, employers, schools, and churches dictate that future growth should be anticipated in these centers.

Resort/Recreation and Crossroad examples here feature small scale lodging and a typical retail node that may provide services to residents and tourists alike.

Additional Opportunities for Growth:

- » US-27 bisects Area 13 along its North/South axis and provides short travel times to the communities of Soddy Daisy, Red Bank, and Chattanooga. This will eventually lead to demand for residential growth and associated commercial services for those wanting to enjoy the natural and scenic qualities, rural lifestyle, and solitude of this area with an easy commute to area employers.
- » Rural Corridors - many of the primary roadways have been identified as rural corridors where setbacks for new development should be instituted to preserve scenic visual access to surrounding farms and natural features. Access management and connectivity standards should also be required along these corridors to maintain rural experience and maintain efficiency of travel for emergency vehicles, school buses, farm equipment and existing residents.

Source: Rural Design Guide FHWA

4.2 PLACE TYPES

Place Types are carefully designated to guide future development and align with the community's vision and adopted plans. These designations indicate whether an area is slated for significant change, gradual transformation, or preservation with minimal alterations. Key considerations include existing zoning, proximity to centers, schools, and parks, as well as the presence of natural resources, necessary infrastructure, and public services. Once Area Plans are adopted, these Place Type designations become essential tools for the Regional Planning Agency (RPA) in making informed zoning decisions. Recommendations for zoning changes are made based on how well the proposed zone aligns with the intended characteristics of the Place Type.

Place Types illustrate a desired character to guide development across a range of community types, from the most urban to suburban, to the most rural places. This distinction is prominently noted in the names of most Place Types, such as Suburban Residential, Urban Residential, and Countryside Residential. Some key elements that contribute to Hamilton County's sense of place include important vistas, the river and its setting within the forested ridges, our diversity of trees, and our historic buildings. This sense of place can occur at multiple levels - across an entire city,

within individual neighborhoods, or in a specific block. The transect graphic below identifies seven general levels of the natural environment to the built environment. The Place Types were partially based on this transect model to ensure that all aspects of Hamilton County's character were considered.

To promote good placemaking, the RPA uses Place Types to influence the form and character of development. This is done alongside the Centers and Corridors approach, as described in Chapter 4.1, to guide different types of development to the most suitable locations. This is based on factors such as Land Use and Development Character, Resiliency, Mobility and Transportation, and Community Facilities.

By designating Place Types, we are not just planning for the present but also safeguarding the unique essence of Hamilton County for future generations. Whether it's the urban vibrancy, suburban charm, or rural tranquility, each Place Type plays a crucial role in maintaining the region's distinct identity and ensuring thoughtful, cohesive development.

Figure 4.5: Transect Zones from Natural (left) to Special District (right) Source: Duany Plater-Zyberk & Company, DPZ

4.2.1 HOW ARE THEY USED?

Place Types reflect whether the community vision and adopted plan identifies an area for significant change, gradual transformation, or preservation with little change. Other factors, such as the surrounding or existing zoning, proximity to Centers, schools or parks, the location of natural resources, necessary infrastructure, and public services are considered. Once Area Plans are adopted, the Place Type designations within those Plans are used by the RPA to inform zoning decisions. A recommendation for a zoning change is based on whether the requested zone will result in the Place Type characteristics described in this chapter. The following Place Types represent the full palette of Place Types available throughout the County but not all Place Types are used in all areas.

Place Types layout out a vision for future land uses and they are intended to guide development choices. Once a plan and its associated Place Type map is adopted, then a request to study new zoning designations and assess what tools are needed to achieve the adopted vision may occur. A zoning study typically follows within 6 months to a year of plan adoption depending on the level of change desired or other influences.

- » Place Types are not zoning.
- » Place Types are recommended future development patterns.
- » Place Types are policy.
- » Place Types are used to inform zoning decisions.
- » Zoning is a regulation.
- » One or more zoning districts may be used to develop a Place Type.

PREDOMINANT USES, LIMITED USES, AND DENSITY

Place Types intentionally promote a mix of uses as a means of providing residents with more housing choices and more access to daily needs and jobs. Each Place Type listed in this subchapter provides examples of potential uses, along with other elements that generally define its character and are divided into:

- 1. Predominant Uses** – The most prevalent, most frequently
- 2. Limited Uses** – Less common, but can still be compatible with the predominant use if limited to certain locations, limited in size, buffered from adjacent uses, etc.

“Place Types do not necessarily describe what exists today, but rather the desired vision of what a place may become.”

*Chattanooga - Hamilton County
Regional Planning Agency (CHRP)*

While limited uses are less prevalent in a Place Type, they can provide additional services and housing options, while maintaining compatibility with the predominant use. However, a proliferation of limited uses will change the character of an area, and the original intent of the Place Type can be lost. Often, rezoning requests are for these limited uses, and where Limited Uses are listed additional guidance has been provided regarding the appropriateness of integrating the use into the Place Type.

Each of the following Place Types includes:

- » A two or three letter abbreviation, and the color, used to identify each on the Place Types map.
- » A general description of the typical, or ideal, situation.
- » A list of characteristics that are generally needed to support the intended development form of the Place Type.
- » Examples of the predominant uses.
- » Examples of the limited uses.
- » Illustrative photos, presented as examples only.

4.2.2 CATEGORIES & PLACE TYPES IN AREA 13

There are 23 Place Types in total as provided and amended from time to time by the RPA [on their website here](#). The four categories with listing of Place Types are below. On the pages following in this section are the individual Place Types that appear in Hamilton County and as shown on the Place Type Map (Figure 4.6).

RESIDENTIAL

- *Countryside Residential (CR)*
- *Suburban Residential (SR)*
- *Urban Residential (UR)*
- *Mixed Residential (MR)*

SPECIALTY DISTRICTS

- *Preserve (PR)*
- *Agricultural (AG)*
- *Resort & Recreation (RR)*
- *Industrial (IN)*
- *Maker District (MD)*
- *Campus (CA)*
- *Regional Facility (RF)*

CENTERS & CORRIDORS

- *Crossroads (XR)*
- *Neighborhood Node (NN)*
- *Neighborhood Center (NC)*
- *Village Center (VC)*
- *Town Center (TC)*
- *Downtown Core (DC)*
- *Rural Corridor (RC)*
- *Suburban Corridor (SC)*
- *Mixed-use Corridor (MC)*
- *Transit Corridor (TRC)*

OVERLAYS

- *Natural Resources (NR)*
- *Urban Residential Single-Family (UR-SF)*

Table 7: Density

PLACE TYPE	MAXIMUM DENSITY	GENERAL INTENSITY
CR Countryside Residential	Up to 2 du/acre	Low Density
SR Suburban Residential (Principal)	Maximum of 5 dwelling units/acre	Low to Medium Density
SR Suburban Residential (Limited)	Maximum of 7 dwelling units/acre	Medium Density
MD Maker District	Maximum of 12 dwelling units/acre	Medium to High Density
NN Neighborhood Node	Maximum of 12 dwelling units/acre	Medium to High Density
MR Mixed Residential (Principal)	Maximum of 12 dwelling units/acre	Medium to High Density
MR Mixed Residential (Limited)	Maximum of 18 dwelling units/acre	High Density
NC Neighborhood Center	Maximum of 8 dwelling units/acre	Medium to High Density
UR Urban Residential	Maximum of 15 dwelling units/acre	High Density
SC Suburban Corridor	Maximum of 18 dwelling units/acre	High Density
VC Village Center	Maximum of 12 dwelling units/acre	High Density
RR Resort & Recreation	N/A	Varies if Type A or B See Place Type Description

CENTERS

XR

Crossroads

Generally four acres or less, Crossroads are smaller than Village Centers or Town Centers and are most often located in rural Areas. They may serve as gateways to adjacent neighborhoods. Smaller footprint buildings frame a single intersection of two arterial or collector streets, or extend a short distance from the intersection. This small cluster of businesses meets some of the daily needs of the immediate residents with stores, restaurants and other neighborhood-serving commercial uses. Over time when the infrastructure needed to support more intense development is in place, Crossroads may grow into the larger Village Center.

Uses

Retail, restaurants, garden centers, personal services, offices, gas stations, small markets, auto repair, landscape businesses, and small industries/workshops (such as breweries, bakeries and woodworking shops).

NN

Neighborhood Node

Located in urban or suburban Areas, and generally a total of only two acres or less, Neighborhood Nodes are much smaller than Village or Town Centers. Smaller footprint buildings frame a single intersection or extend a short distance from the intersection. This small cluster of businesses provides goods and services, such as laundromats, restaurants, small grocers, and other neighborhood-serving commercial uses, to the immediate surrounding community. Residential uses over retail or office are common.

Uses

Small retail and restaurants, convenience stores, personal services, offices, farmers' markets, small industries/workshops (such as breweries, bakeries and woodworking shops), live/work, short-term vacation rental, and two, three and four-unit dwellings

When a Neighborhood Node is located along a Mixed-use Corridor or Transit Corridor, the building size in the Neighborhood Node should be consistent with its surrounding corridor type (typically larger than described above), but the uses at that location should include ground-floor commercial or services.

NC

Neighborhood Center

Usually found in suburban locations, Neighborhood Centers are shopping centers of 5–15 acres that provide goods and services primarily to the surrounding neighborhoods. They are not part of a continuous “strip” of commercial uses along a corridor, but rather are limited to a single quadrant of an intersection and surrounded by residential development. They usually have large, shared parking lots with a few outparcel buildings that face the street. Some include smaller commercial properties on the other corners of the intersection. Neighborhood Centers often have one large building that houses multiple stores, deeper building setbacks, an emphasis on vehicle access, and limited civic services. Neighborhood Centers may be redeveloped as Village or Town Centers with a more walkable and urban form, over time.

Uses

Grocery stores, retail and restaurants, offices, personal services, small workshop/industries (such as studios, work spaces, bakeries, breweries, woodworking shops or other low impact production), townhomes, and minor auto service/repair

VC

Village Center

Larger than Neighborhood Nodes, but smaller than Town Centers, the Village Center (generally 2–10 acres) is a pedestrian-oriented cluster of medium footprint buildings, with a mixture of commercial and residential uses. Multi-story buildings with residential uses over retail or offices are common. Due to their intensity, Village Centers are typically located along transit routes, but primarily serve local residents. Walking, biking and transit are prioritized over auto use in Village Centers, with shared parking lots providing a park-once environment. Pedestrian entrances front directly onto the sidewalks, with window displays at the ground floor to provide interest for pedestrians. Village Centers are often organized around a central public square or park. Village Centers may, over time, grow into Town Centers.

Uses

Civic institutions, public square or park, retail, restaurants, offices, personal services, lodging, live/work, small industries/workshops (such as studios, bakeries, breweries, or woodworking, or other low impact production), townhomes, short-term vacation rentals and two, three and four-unit dwellings.

CORRIDORS

SC

Suburban Corridor

Suburban Corridors have a linear configuration because they are located along major commercial streets, however they differ from Mixed-use and Transit Corridors in that the development along them tends to be more spread out. They are not typically served by frequent transit. Businesses along Suburban Corridors serve a large geographic Area and are primarily accessed by car. Buildings tend to be single-story and house a single use with deep setbacks from the street. Some developments have a horizontal mix of uses within a larger site. The types of businesses found along Suburban Corridors range from stand-alone restaurants and stores, to “strip” shopping centers, to regional malls, medical centers, multi-story office buildings, and hotels. Multi-unit residential is also a growing use along suburban corridors, either as new construction or as retrofits of older retail centers or hotels.

Predominant Uses

Retail, multi-unit housing, offices, restaurants, personal services, medical facilities, lodging, small workshops and artist studios, recreation and entertainment (such as bowling, mini golf, conference centers, theaters) and assisted living facilities.

Limited Uses

Auto-oriented services when located along a major corridor or at the corner of a major intersection.

RC

Rural Corridor

Primarily located in rural parts of the County, and are characterized by lots of open fields and woodlands. Development along Rural Corridors is sparse with farms or single unit homes on large estate lots. A few scattered subdivisions with smaller lots may have entries along these corridors, but the homes are separated from the corridor by distance (50 - 100 feet), and by dense vegetated buffers, in order to preserve the rural character of the corridor. Rural Corridors do not have the more dense, connecting street networks. They are typically two-lane roads. Rural Corridors may however, also take the form of a major thoroughfare, such as a state designated scenic parkway, with mountainside or lakefront views. A few commercial uses, often located at a Crossroads intersection, or as a stand-alone business, may be found along Rural Corridors, but no long stretches of commercial businesses.

The purpose of the rural corridor overlay is primarily to address new subdivision development. A rural corridor setback for a subdivision for the purposes of the plan refers to a required distance that new development must maintain from a designated corridor, as detailed on the Place Type map. The intent of the setback is to protect the character and environmental integrity of the rural landscape. The setback does not apply to individual homes outside a major subdivision.

RESIDENTIAL

CR

Countryside Residential

Countryside Residential Place Types have a very rural character and consist primarily of single-family homes on large lots. Countryside Residential may include open fields, woodlands, and streams or lakes, as well as accessory buildings, such as barns and greenhouses. This Place Type also includes the County's agricultural uses related to the production of crops, livestock, forestry uses and agricultural service businesses ranging from roadside vegetable stands or feed & seed stores to larger production facilities.

Residences and development centered around farming are typically on septic systems. Residences are generally further from key destinations than in other residential Place Types therefore, a personal vehicle is needed to reach daily needs. Fixed-route transit is not feasible, and sidewalks are not likely, due to the low density of these Areas.

Predominant Uses

Single-unit detached, farming activities, accessory buildings (barns, greenhouses, etc.), manufactured homes

Limited Uses

Event facilities, golf courses, and campgrounds where appropriate infrastructure exists and development impacts such as noise, traffic, and activity are directed away from existing residential uses.

SR

Suburban Residential

The Suburban Residential Place Type has a predominantly low intensity, single-family detached, residential development pattern, especially within the same block. Some moderate density residential development, such as small lot houses or attached townhomes, may exist, but are located on a major street or near a transit route or school. When next to lower density residential development, this moderate intensity infill development maintains the existing rhythm and feel of the street. Factors that play into this rhythm and feel include lot width, setbacks, building massing, and height. Open spaces are typically private (back yards), but greenways may provide connectivity. Residences in this Place Type are generally further from key destinations than those in other Place Types therefore, a personal vehicle is needed to reach daily needs.

Predominant Uses

Single-unit detached residences up to 5 dwelling units/acre, accessory dwelling units (ADUs)

Limited Uses

The following uses when located within a 1/4 mile of a public school or park or center where appropriate infrastructure exists: single-unit detached residences up to 7 dwelling units an acre; townhomes (up to 4 massed units per building); and two, three, and four unit housing

MR

Mixed Residential

The Mixed Residential Place Type is intended to provide a wide range of housing options for residents at various stages of life, and walkable destinations in close proximity. Due to their intensity, Mixed Residential developments are located along major streets, or within walking distance (1/4-mile) of a transit route. The Mixed Residential Place Type includes moderate to higher intensity housing. Taller multi-family buildings are located along streets, with shorter buildings on local streets to provide a transition to any less intense residential uses.

Predominant Uses

Two, three and four unit residences, multi-family residential with 5–12 units per building, cottage courts, townhomes, manufactured home parks, and accessory dwelling units (ADUs).

Limited Uses

Multi-family of over 12 units per buildings should be directed towards major streets/corridor or adjacent to a center.

SPECIALTY DISTRICTS

PR**Preserve**

Preserves are large expanses of forest, floodplains and other natural resources, as well as public parks and recreation Areas that have been set aside as places where general development is not allowed. They may also include privately-owned land that is permanently protected by conservation easements and remains in a largely undeveloped state. Some may be used for passive recreation, while others are largely off limits to human use due to sensitive natural resources or their remote location. Development within the Preserve is minimized, and is limited to cultural, educational or recreational uses.

Uses

Undisturbed open space, visitors' centers, nature centers, public parks, active and passive recreation, trails, cemeteries, and accessory structures such as concessions, storage and parking.

**RR****Resort and Recreation**

The Resort and Recreation Place Type supports outdoor activities such as camping, boating, golfing, bouldering, mountain biking, as well as corporate nature retreats, and eco-tourism activities. These places are focused on enjoying nature, exceptional views, or historic landmarks. However, unlike Preserves, which are primarily government-owned properties with very limited development, such as a state or County park, the Resort and Recreation Place Type can include multiple private businesses with more development, such as marinas, hotels, restaurants and even housing. Properties may range in size from a 20-acre campground to 100+ acre resorts

Resort Type A accommodates a more intense outdoor recreation and park experience and could include hotels, conferences centers, large campgrounds/RV parks and related uses or even a full resort. Oftentimes these are located in or adjacent to state or county parks or may develop from a golf course or event facility such as a fairground or agritourism site. The development size and location should be designed so that the impact of this larger-scale format lessens potential negative aspects.

Resort Type B accommodates smaller-scale or less intense recreational activities such as golf courses, ballfields, cultural facilities, marinas, and related accessory use such as parking areas, small campgrounds or cabins, and related retail goods such as camp stores, farm stands, and equipment rental (kayaks/canoes, bicycles, etc.)

**Predominant Uses**

Campgrounds/RV parks, hotels, cabins, restaurants, marinas, camp stores, golf courses, agriculture-related businesses (e.g. boarding stables, riding academies), farming activities

Limited Uses

Single-unit housing (detached and attached) and reception facilities as a secondary use integrated into a resort.

CA

Campus

Campus Place Types are characterized by one major activity such as educational, office, industrial, medical, or religious. Campuses are typically based on a master plan that incorporates buildings, open spaces, streets, pedestrian networks, and parking in a unified manner. Campuses have clearly defined edges—often delineated with gateway structures and landscape—that distinguish them from adjacent Place Types. Residential buildings and small convenience services often support the predominant use. Campuses function as major employment and activity centers and are often served by public or private transit.

Uses

Institutions (such as academic, medical, religious or research facilities), offices, clubhouses/ meeting halls, athletic facilities, non-noxious/non-nuisance manufacturing and industrial, open space, multi-family residences (residence halls and dormitories), onsite retail and food services, and staff housing.

Existing schools, large medical and church campuses, government facilities, and corporate headquarters are identified as the Campus Place Type. However, as land use and property owners change over time, the Campus designation may no longer be applicable. In that case, the plan goals, surrounding Place Types, and context should all be considered in identifying future use/reuse of the former Campus site.

IN

Industrial

The Industrial Place Type supports a variety of manufacturing uses. Unlike the Maker District Place Type, the Industrial Place Type includes both non-noxious operations (no hazardous materials or pollution) and noxious industries (heavy industrial production). The latter are not located adjacent to residential Areas, but are not so far away as to be a commute burden. The size of lots (2+ acres) and buildings are often larger than those in the Maker District Place Type.

Uses

Light manufacturing and industrial facilities, including assembly facilities, offices, distribution, warehousing, wholesaling, retail specifically related to the primary use and self storage facilities.

Limited Uses

Heavy manufacturing should be located along major transportation infrastructure and directed away from existing development.

There are limited areas of industrial uses in the County today. Some smaller scale industrial areas may appropriately transition to Maker Districts supporting a combinations of contractors, skilled trades, repair specialists, artists and artisans, food production, and service centers.

MD**Maker District**

Maker District Place Types are live-work districts where housing and workplaces are located in close proximity to each other, providing residents with convenient access to employment. They include a mix of light manufacturing, assembly, and contractor businesses, along with multi-family residential and commercial uses. Older smaller industrial structures that have been adapted for new purposes are frequently found here. Industrial facilities are non-noxious (no hazardous materials or pollution), and non-nuisance (no odors, excessive light, or heavy truck traffic). Due to these smaller buildings, short block lengths, and the mix of other uses, these Areas are generally walkable. Parks, plazas, and neighborhood-serving retail enhance the character and livability of the Area.

Uses

Non-noxious/non-nuisance light manufacturing, assembly, distribution, small workshop/industries (such as woodworking shops, bakeries, or other low impact production), studios, breweries, contractor's offices, live/work, multi-unit residential, retail, offices, restaurants, vehicle repair, gas stations, outdoor storage yard, and self storage facilities

**OVERLAYS****NR****Natural Resources Overlay**

The Natural Resources Overlay is not a Place Type in and of itself. It is an Overlay on top of the underlying Place Type that identifies Areas considered sensitive due to the presence of steep slopes, floodplains or wetlands. Sites within this overlay are not protected by law from development. The purpose, therefore, is to identify these sensitive Areas so that they are given consideration for protection, or incorporated as amenities within new developments. Some sites are already developed and the overlay designation does not mean development cannot expand in these Areas; it merely identifies the location of floodplains, wetlands, and steep slopes.

Predominant Uses

Uses are defined by the underlying Place Type.

4.2.3 PLACE TYPES MAP

Please reference a separate map. Map is not included in this online document due to file size.

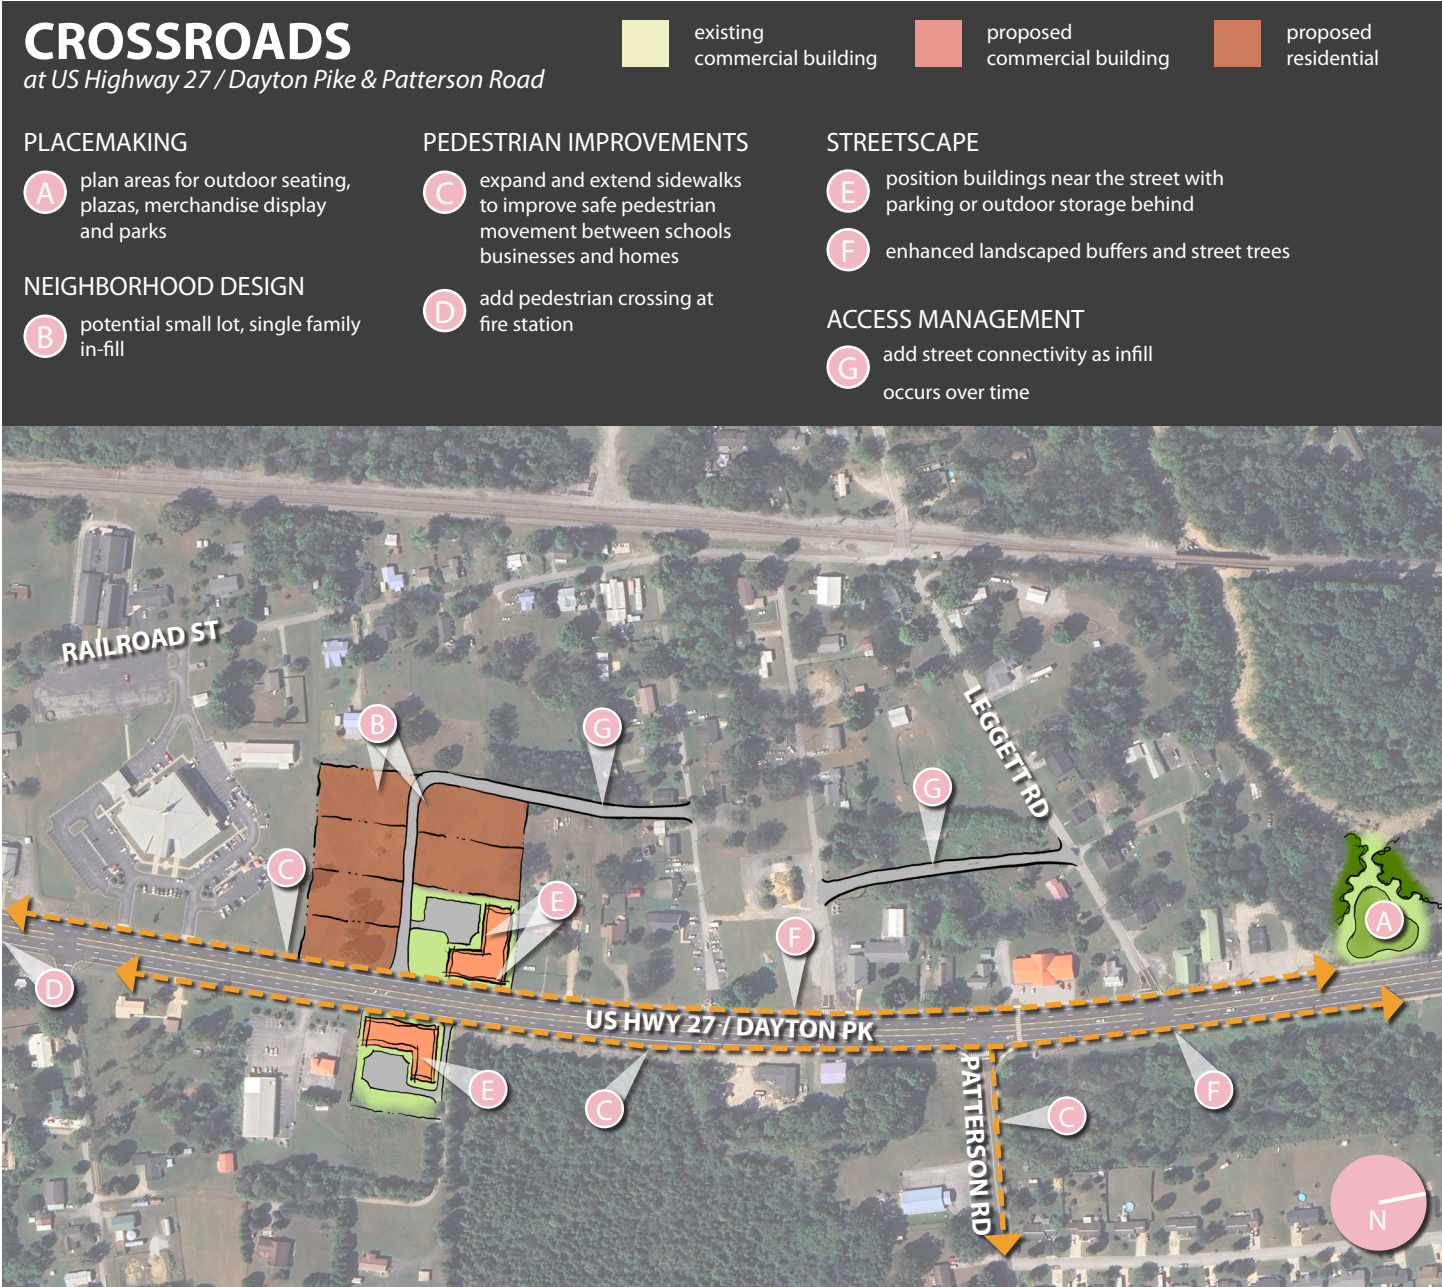

Figure 4.6: Place Types Map

4.2.4 CENTERS & CORRIDORS VIGNETTES

The Centers and Corridors Vignettes bring to life a vision for thoughtfully guided growth in key locations across our communities. By focusing on high-potential centers and strategically important corridors, these vignettes illustrate how balanced land use—combining residential, commercial, and recreational spaces—can shape places that are both dynamic and resilient. Each vignette reveals how carefully aligned planning can elevate connectivity, support walkable neighborhoods, and foster economic growth while preserving Hamilton County’s distinctive character, natural beauty, and cultural heritage. Through these targeted narratives, we explore how well-designed centers and corridors not only strengthen community identity but also enhance access to essential services, encourage diverse transportation options, and bolster the area’s long-term sustainability. This vision aligns with the unique needs and values of Hamilton County residents, building a legacy of vibrant, and adaptable communities.

The following depictions are intended to represent one idea of potential future development at these locations. Any future development or redevelopment at these locations would need to be initiated by the private property owner. Where there is a mismatch between a vignette and the Place Type map, the Place Type map reflects the official policy.

4.3 POLICIES

The goals and policy recommendations outlined in Area plans represent a comprehensive framework designed to guide sustainable development and enhance community well-being. These initiatives are crafted to ensure that future growth respects and enhances the County's and Area 13's distinct community character while preserving its abundant natural resources.

Emphasizing the importance of balanced growth, the plans prioritize the development of accessible parks and recreation Areas that promote active lifestyles and environmental stewardship. Infrastructure improvements are a cornerstone, aimed at improving the connectivity of transportation networks, enhancing water and wastewater management systems, and integrating sustainable solutions.

The plans emphasize the need for diverse and affordable housing options to support a growing and inclusive population. By aligning these goals with thoughtful policy recommendations, Hamilton County seeks to foster a resilient and cohesive community. This approach not only prepares the county for future challenges but also enhances its livability and ensures that development is carried out in a manner that respects and preserves its unique character and natural beauty.

The graphic below reinforces the four Community Themes and the seven unincorporated Area plan goals and how they inform the policies for each individual Area. In this chapter, each goal is connected to one of the four Community Themes and following each goal, are policy recommendations to implement that goal.

“Comprehensive Plans offer a strategic approach to where and how we grow. They address areas for change and areas to preserve.”

*Chattanooga - Hamilton County
Regional Planning Agency (RPA)*

4.3.1 GOAL 1 & POLICIES

GOAL 1 BALANCE GROWTH, ECONOMY & COMMUNITY CHARACTER

- Policy 1.13.1** Area 13 is still sparsely populated, with a focus on agriculture and rural lifestyles. Develop a mechanism for farmland preservation.
- Policy 1.13.2** Focus economic development on growing local businesses in Sale Creek and Bakewell.
- Policy 1.13.3** Farmland preservation, protection of recreation areas and natural resources, and targeted housing affordability strategies should be the primary focus of policies shaping future growth and development.

4.3.2 GOAL 2 & POLICIES

GOAL 2 PROTECT & ENHANCE NATURAL RESOURCES

- Policy 2.13.1** Convene a coalition of conservation organizations and land owners to develop a coordinated strategy for preserving landscapes in a manner consistent with local culture, and that increases recreational access.
- Policy 2.13.2** The recreational assets of along the Cumberland Plateau in northern Hamilton County are largely hidden gems known to locals and recreational specialists. They should be the centerpiece of ongoing preservation and stewardship strategies but also an asset to support local businesses and visitation.
- Policy 2.13.3** McDonald Farm should be a model for how to generate the collective value of preservation, agriculture, recreation, and economic opportunity. Follow up the market analysis of this property with a phased master plan that begins with input of local stakeholders and shapes them into actionable improvement phases that realize the synergies outlined above while respecting the history and culture of the McDonald Family and the Sale Creek Community.

4.3.3 GOAL 3 & POLICIES

GOAL 3 PRESERVE & ENHANCE OUTDOOR RECREATION

- Policy 3.13.1** Northern Hamilton County is rich in state, county, and municipally managed recreational lands, creeks, trails, parks, and the Tennessee River. Hamilton County should partner with TDEC and their newly organized Office of Outdoor Recreation to highlight all that northern Hamilton County has to offer visitors to our area and steward these assets to increase recreational opportunities and opportunities for commerce.
- Policy 3.13.2** Possum Creek and Sale Creek should be planned as official blueways. The County should work with public and private partners to add points of access, highlight and augment permanent and seasonal attractions, recreation base businesses, and places to stay. Make an effort to have these routes recognized in the State of Tennessee Blueways Plan and seek related investments in recreational infrastructure.
- Policy 3.13.3** Work with the State Department of Tourism, Pick Tennessee, Chattanooga Tourism Co. and others to recognize agricultural heritage and agritourism as part of the recreational landscape in Hamilton County. In this way agriculture and recreation can partner to develop marketing and promotions that highlight Hamilton County's best qualities and create economic opportunities from our most valued landscapes. McDonald Farm is positioned to be a focal point for this strategy where recreation, agricultural, and heritage based tourism enthusiasts can convene. Investments should first benefit Sale Creek Area residents and then build a regional market.

4.3.4 GOAL 4 & POLICIES

GOAL 4 PROMOTE CONNECTIVITY & MULTI-MODAL TRANSPORTATION

- Policy 4.13.1** The rural nature of Area 13 does not lend itself to area wide pedestrian connectivity or comprehensive transit service. Instead the focus should be on targeted sidewalk pedestrian infrastructure enhancements near schools, churches, and community gathering places.
- Policy 4.13.2** Sidewalk connections along US-27 should be phased in as the villages of Bakewell and Sale Creek redevelop or uses incrementally intensify and well designed crossings should be added at key intersections. Legget Road, Patterson Road, Reavley Road, and at Retro Hughes and McCallie Ferry. These improvements should be planned in phases and either required of developers as properties are converted or installed by the County.
- Policy 4.13.3** Curb, gutters, and sidewalks may not be necessary in rural subdivisions at base density. However soft surface paths to provide a safe space for fitness activities and kids to get to a school bus stop should be a standard requirement.
- Policy 4.13.4** Recreational trail connectivity should also be a priority, starting with closing gaps in the regional Cumberland Trail system. Utilizing the Cumberland Trail as a spine, TDEC, Hamilton County Parks, and others should work to extend spurs along the area creek corridors and into other prime recreational lands like the McDonald Farm.

4.3.5 GOAL 5 & POLICIES

GOAL 5 PROVIDE ADEQUATE INFRASTRUCTURE

- Policy 5.13.1** The lowlying nature of much of the terrain makes flooding a problem during storm events. New development should be required to provide engineered stormwater plans proving adequate detention area on property or be required to pay for regional solutions.

4.3.6 GOAL 6 & POLICIES

GOAL 6 PROVIDE SUITABLE COMMERCIAL & MIXED-USE CENTERS

Policy 6.13.1 Area 13 is not heavily populated and housing is dispersed across the 82 square mile area. Most residents seek goods and services in Soddy-Daisy or Dayton. As the communities of Sale Creek and Bakewell grow, these existing villages should be the focal point for additional commercial growth and residential density.

4.3.7 GOAL & POLICIES

GOAL 7 PROVIDE A RANGE OF HOUSING OPTIONS

Policy 7.13.1 The lack of sewer and water infrastructure, constraints on emergency services, undulating terrain, and floodprone low lands make Area 13 a place where development should remain at rural densities and only in the areas that can be appropriately engineered and serviced. Additional housing density and diversity of form, including options for older area residents, should occur in Sale Creek and Bakewell before extending outward. Infrastructure investments should also benefit these communities prior to extending further outward.

Policy 7.13.2 The McDonald Farm property has primary uses and community functions that should take precedence. However, the farm is a location that could accommodate a traditional neighborhood design or agriculture based cluster subdivision as a complementary use to the primary community and recreation functions as a later phase.

AREA 13 SPECIFIC RECOMMENDATIONS

Area 13 encompasses the rolling valley and hillsides nestled between Flat Top Mountain to the west and Chickamauga Lake and the Tennessee River to the east. At its heart lie the communities of Sale Creek and Bakewell, which are well-connected via the US 27 corridor to Rhea County and Dayton, TN, to the north, and Soddy-Daisy, Chattanooga, and the broader Hamilton County to the south. This area retains its deep agricultural heritage, with residents protective of its rural character and way of life. Many express a strong desire to preserve agricultural operations and ensure development is slow and intentional.

Concerns about infrastructure limitations—particularly emergency response and water systems—further reinforce the community’s preference for gradual growth. While large tracts of farm land remain, fragmentation is increasing, threatening the continuity of productive farmland. Immediate collaboration with farmers, landowners, and preservation advocates is essential to protect these tracts before opportunities are lost.

The area’s topography transitions from the steep slopes of Flat Top Mountain to the wetlands and floodplains near the Tennessee River. Watersheds like Possum Creek, Rock Creek, and Sale Creek originate as steep-sided gorges before spreading into broader valleys with associated wetlands. Future development must prioritize wide buffers around steep slopes, creeks, wetlands, and floodplains to safeguard both natural resources and future structures.

Nearly all of Area 13 is designated as Conservation or Countryside Residential, maintaining the A-1 base zoning density. However, many residents voiced a desire to preserve the land primarily for agriculture, with allowances for family growth. Higher-density residential or commercial development is limited to small-scale Neighborhood Nodes at the State route 27 intersections with McCallie Ferry Road and Patterson Road. Larger-scale Village or Town Center development, anticipated only in the incorporated area of Soddy-Daisy, should be coordinated with County plans to address regional infrastructure needs.

Recreational uses are already well-established around the Possum Creek and Sale Creek areas as well as east to Lakesite via Sequoyah Access Road. Expanding these operations, along with Resort Recreation uses like Big Soddy Gulf, could generate economic benefits if environmental suitability and infrastructure capacity

are confirmed. Collaboration with Soddy-Daisy planners is essential for any developments within its municipal boundaries.

At the northern edge of Area 13 lies the McDonald Farm—a legacy property sold to the County by the namesake family. This farm holds unique terrain and historic significance, serving as a community hub and hosting the last two Hamilton County Fairs. While an economic analysis has been completed, further study is needed to refine land use plans. Potential uses include agriculture, resort recreation, and conservation, which would preserve its heritage and ensure sustainable economic returns. The acquisition of the McDonald Farm offers a generational opportunity to protect historic structures and honor the community’s agricultural roots while exploring innovative uses for future generations.

TOOLS & STRATEGIES

Conservation Subdivisions:

- » Development in sensitive areas is designed to lessen impacts on natural resources, not only to serve environmental needs, but also to create amenities for residents. A Conservation Subdivision typically has at least half of its potentially buildable land area devoted to undivided, permanently protected open space.
- » Leasing preserved land back to the original owner or a neighboring farmer is an effective way to maintain agricultural use, provided the site can support adequate infrastructure.

Farmland & Riparian Corridor Protection:

- » Farming and sustainable forms of recreational development should be the primary economic drivers for Area 13 for the planning horizon of this document. (5-10 years)
- » Farming, Agricultural Businesses, and Agritourism should be prioritized over other forms of economic development in Area 13. Landowners wishing to continue farming should be supported with development setbacks on adjacent properties and efforts to create additional support programs as outlined in the implementation toolbox.

Centers:

- » Very small footprint commercial infill and limited smaller lot single family may be appropriate in designated Neighborhood Nodes in Bakewell and Sale Creek.
- » These Neighborhood Nodes recognize existing commercial businesses and services and the opportunity for limited adjacent infill development as the area grows. Any rezoning should be contingent upon the availability of adequate water and sewage disposal infrastructure.

Corridors:

- » The Rural Corridor designation is broadly recommended along the arterial and major collector roads in the Area. This designation will require development setbacks allowing for placement of access improvements, pedestrian and school bus facilities, storm water facilities, and maintenance of the rural character of the area where new residential subdivisions are approved.
- » A Suburban Corridor designation is recommended along US-27 from the edge of Soddy Daisy to Bakewell and Sale Creek. This designation is in recognition of the number of existing businesses populating this segment of road. It also recognizes the potential need to slow or manage traffic at the Neighborhood Nodes in Bakewell and Sale Creek as they add more activity and pedestrian movements. The Suburban Corridor designation indicates that smaller setbacks of buildings may be appropriate and that access management strategies need to be employed to prevent future safety and congestion issues. The Suburban Corridor Definition is not meant to reflect any encouragement of infill commercial outside of designated Neighborhood Nodes.

Transportation Infrastructure:

- » Transportation Infrastructure must be improved in the areas identified for priority investments in the [Transportation Project Priorities List](#). The County should immediately create requirements limiting the size/density of developments with a single point of access, providing for safe pedestrian infrastructure within developments, and governing intersection spacing and access design for new subdivisions.

General:

- » Constraints to sewer access, emergency services, and water infrastructure dictate that larger scale commercial and residential developments above base zoned A1 density are not appropriate in Area 13 outside of existing incorporated communities, i.e. Soddy Daisy.
- » The RPA should extend the offer for joint planning efforts with Soddy-Daisy to encourage future growth and economic vitality in municipal areas and coordinate delivery of required infrastructure and services between jurisdictions.

CHAPTER 5

NEXT STEPS & IMPLEMENTATION

- 5.1 INTRODUCTION
- 5.2 IMPLEMENTATION MATRIX
- 5.3 PLAN SUMMARY

5.1 INTRODUCTION

This chapter serves as the essential bridge between each community's vision and the actions needed to make it a reality, translating broad goals and strategies into specific, actionable steps. By outlining processes for tracking progress, identifying funding opportunities, and fostering ongoing community involvement, this chapter offers a clear roadmap to bring these plans to life—guiding Hamilton County's growth in ways that honor its unique character, address residents' needs, and protect the qualities that define each community.

Hamilton County's growth has varied significantly across the five Areas examined in this plan, reflecting a wide range of factors. Rapid development has shaped East Brainerd, Ooltewah, and incorporated Collegedale in Area 12, along with parts of Harrison in Area 9 and Middle Valley in Area 8. Similarly, steady interest surrounds Signal Mountain and Walden in Area 7. In contrast, most of Area 13 and the northern sections of Area 9 have largely preserved their rural landscapes and agricultural heritage.

Key infrastructure corridors, particularly I-75, have been instrumental in fostering growth over the past two decades, fueling employment hubs, retail centers, and other commercial services. Interstate access and centralized sewer services has created favorable conditions for development and infrastructure investments in these corridors. Major employers like McKee Foods and Volkswagen, along with their networks of suppliers, have driven demand for nearby housing and led to increased commercial activity. High-performing schools in the Ooltewah and Harrison areas have contributed to further residential demand.

Infrastructure

The presence of sewer trunk lines and available capacity remains one of the single biggest predictors for residential growth. However, the overall availability of sewer capacity is a significant constraint, presenting Hamilton County planners and leadership with critical decisions on where to allocate resources for sewage treatment and collection expansion. Currently, most funding is dedicated to increasing storage for combined sewer flows, aimed at preserving treatment capacity and avoiding regulatory actions tied to water quality.

An integrated approach is essential to addressing challenges facing the sewer facilities that serve Chattanooga and Hamilton County. This includes an intensified focus on reducing stormwater impacts through both engineered and low-impact development practices. Investing in more comprehensive stormwater infrastructure reviews across both commercial and residential projects could provide significant returns, mitigating maintenance costs tied to sewer capacity. Incentives for low-impact development, as implemented in other communities, could help retain stormwater on-site, reduce flow rates into combined systems, and enhance water quality within critical watersheds. Better mapping of sewer and water infrastructure is also needed to provide planners with the tools they need to identify infrastructure gaps, investment targets, and areas of the county that can be planned as future growth centers.

Transportation

The County's economic and population growth has created new challenges such as driving demand for efficient and safe transportation alternatives. This need is especially evident in areas experiencing the most rapid expansion. Keeping pace with these demands through infrastructure maintenance, improvement, and expansion is a significant challenge faced at every level of government, and Hamilton County is no exception. As growth continues in the County and the greater Chattanooga and northwest Georgia region, strategic investments in the transportation system will be essential to support future mobility and enhance residents' quality of life.

Hamilton County's role as a regional transportation hub underscores its significance. Interstates 24, 59, and 75 provide critical connectivity for freight, recreation, and commuter traffic across the Southeast and key corridors to the Northeast, Midwest, Southwest, and Florida. Additionally, the county is served by Class I railroads, CSX Transportation and Norfolk Southern Railway, offering freight movement alternatives nationwide. The Tennessee River further enhances freight transport options as a navigable waterway.

As Hamilton County grows, a more focused approach to transportation planning will be essential. Key strategies include corridor management plans, access management strategies, and road safety audits. Corridor management plans for routes such as Ooltewah Ringgold Road, Highway 58, Hixson Pike, and Middle Valley Road can reduce traffic friction and improve access efficiency for businesses and residential areas. Access management strategies, including regulating driveway placement, optimizing intersection design, and promoting shared access points, offer a more detailed approach to improving traffic flow and safety. Regular road safety audits for high-crash routes will proactively identify and address safety concerns.

Many of Hamilton County's critical routes are under TDOT jurisdiction. Leveraging funding for improvements to those routes would begin with adding the desired route or improvement to the long range transportation plan (RTP) so that state and/or federal funding can be allocated based on the prioritization of needs by the MPO. Ongoing monthly or quarterly coordination meetings are recommended between the Hamilton County Roads Committee, RPA-MPO planners and the staff at TDOT Region 2 to advocate for future projects. This will also allow County leadership to stay informed of changes or opportunities for funding new projects or spot improvements.

To effectively address the unique needs of each Area, strategies must be tailored to specific locations and projects. These approaches should be further refined through detailed, site-specific safety and design studies. Potential tools include:

- » Tax Increment Financing (TIF)– This would be particularly useful in areas where growth is expected to increase traffic demand. The McDonald Farm is a good example of somewhere in Hamilton County that TIF could be applied.
- » Business Improvement Districts (BID)– This would be a similar approach as the TIF but would be more applicable to developed commercial areas to complete smaller road, multimodal, or streetscape projects.

- » Alternative Transportation Funding – Projects involving electric vehicle infrastructure (charging stations) or other solutions such as bike-share or ride-share services often qualify for different funding programs. Given the rural character in part of the County, these types of projects would need to be located in places with the highest probability of success.
- » Public-Private Partnerships – This can be an important tool for funding large infrastructure projects with private companies when the opportunity for an industrial, commercial, or residential projects arise with benefits to the County. The costs, financing, and effort of project delivery can be shared when working with private companies.

The transportation analysis for these Area Plans aimed to identify impactful projects that might otherwise be overlooked in the TIP process but are critical to Hamilton County residents. Potential projects addressing roadway safety and traffic congestion were identified across all five Areas and prioritized based on their impact and cost. [This list](#) serves as a valuable tool for County transportation planners and engineers, helping to advocate for major projects within the MPO–TIP planning process while also providing a strategic roadmap for efficient local investments that can deliver meaningful results in the near term.

The recommended projects include both design and construction initiatives, as well as engineering studies to refine potential solutions and anticipate future transportation needs. These recommendations are designed to address existing traffic and roadway safety challenges and can be seen as deferred investments needed to support growth that has already occurred. If fully funded and implemented, the Transportation Project Priorities List would create synergistic improvements, significantly enhancing the county's transportation network. However, as new growth unfolds, additional evaluations and investments will be essential to meet evolving demands.

Emergency Services

To support the analysis of current conditions, the County and RPA also commissioned a Fire and Rescue Services Evaluation. Unincorporated Hamilton County is primarily served by a patchwork of dedicated and resourceful volunteer fire departments. With findings that reveal life safety implications tied to new growth, the report underscores the need for careful planning on where and how future developments occur, taking into account building types, heights, and roadway connectivity in order to adequately protect residents, business owners, and their structures.

Addressing Future Challenges

The benefit of planning for growth within the centers and corridors framework is that it greatly increases the odds of predicting where future sewer, transportation, emergency services, stormwater, water, communications, education, and recreational infrastructure investments will be required. However, realizing these goals will require significant financial and human resources. Outside projections estimate the combined need for infrastructure investments across [Hamilton County at around \\$3.8 billion](#)—a figure that poses challenges for per capita affordability.

Individual views of elected leaders on where and how much infrastructure investment is needed will undoubtedly vary, but it is clear that higher levels of funding and planning are essential to address existing backlogs across various infrastructure categories. Without an approved Comprehensive Plan, County leadership and staff have had difficulty focusing growth and predicting where infrastructure improvements will be needed next.

While certain areas have already developed strong market dynamics due to key employers, shopping centers, and transportation infrastructure, balanced investments in both traditional and social infrastructure could promote more equitable growth across Hamilton County. However, without adequate sewer capacity, education facilities, and emergency services, further growth-oriented policies may have limited impact.

Hamilton County stands at a critical crossroads where leaders are grappling with past deficiencies in infrastructure investments driven by sustained growth associated with national and regional migration and natural or endemic growth. The county continues to attract residents drawn by job opportunities, climate, quality of life, and comparatively affordable living. Meanwhile, existing residents often express a strong desire to preserve the rural character, safety, and quality education opportunities for their families.

The implementation strategies within this plan aim to directly address these priorities and lay the groundwork for a sustainable future:

1. A multifaceted approach to increasing the quality and capacity of existing infrastructure.
2. Seeking synergies between land use and infrastructure planning and improved standards for new development that maximize the efficiency, capacity, and return on investment for both private and public infrastructure construction and spending.
3. Planning and design strategies that reduce development impacts and maximize existing education, transportation, recreation, and natural resource assets.
4. Initiate new strategies to preserve rural lifestyles, agricultural production, and associated land.
5. To identify new potential revenue streams, financial vehicles, and public-private partnerships for addressing the needs identified by Hamilton County residents.

5.2 IMPLEMENTATION MATRIX

The implementation process for the Area plans is built on strong partnerships, strategic tools, and targeted funding, all aimed at bringing each community’s vision to life (see Community Themes). Collaboration between local governments, stakeholders, and residents is at the heart of this process, ensuring that efforts are aligned and resources are effectively utilized. Key projects are prioritized, with clear timelines and responsibilities, while a range of tools and funding mechanisms are deployed to support these initiatives. This comprehensive approach ensures that the plans are not only actionable but also adaptable, allowing for continued progress as community needs and opportunities evolve.

POLICY SUBCATEGORY (TOOLS & STRATEGIES)

The Implementation Matrix organizes recommendations into specific focus areas, providing a clear structure, by breaking down broader policy goals into targeted subcategories. This section enables a more detailed approach to land use, infrastructure, environmental conservation, and community services allowing Hamilton County to meet the unique needs of each planning area while advancing cohesive, Countywide objectives. These categories are were tailored based on the overall policy objectives in the introduction chapter and the input received throughout the community feedback process. Within the matrix, here are 5 topics with each covering various community aspects of Plan Implementation:

- 1. **Community Character & Land Use Patterns**
- 2. **Natural Resources**
- 3. **Infrastructure & Transportation Network**
- 4. **Economic Health & Community Opportunity**
- 5. **Funding Mechanisms**

RECOMMENDATIONS

Outlines targeted actions to support Hamilton County’s vision for balanced, sustainable growth. Each recommendation offers guidance for decision-makers, addressing key areas such as land use, infrastructure, resiliency, and community development. These recommendations are crafted to reflect the unique needs of each planning area, ensuring that policies not only guide growth but also strengthen community character, enhance infrastructure, protect natural resources, and improve residents’ quality of life.

These implementation recommendations, as part of an adopted plan, are intended in themselves to act as policies guiding future action, including work program activities, coordination, and as an additional reference for future rezoning applications and zoning, subdivision and other development regulation amendments.

APPLICABILITY

Identifies where each recommended action is most relevant across Hamilton County’s planning Areas. By specifying how and where the policies can be applied, this category ensures that recommendations are tailored to the unique conditions, needs, and priorities of each community. This targeted approach allows for flexible, area-specific strategies that respect local character while addressing shared Countywide goals.

This helps guide effective implementation, making sure that resources and efforts are directed where they will have the greatest impact.

Case Study/ Example Ordinance

Provides practical insights and proven strategies from other communities that have successfully addressed similar challenges. By examining these real-world examples and ordinances, Hamilton County can draw valuable lessons to inform its own policies and practices. This section highlights adaptable approaches for land use, infrastructure planning, environmental conservation, incentives, economic development, and impact fees offering a foundation for local initiatives that align with the unique needs and goals of each Area.

Timing

Establishes a strategic timeline for each recommended action, guiding when and how these initiatives should be undertaken. By setting immediate (0-1 Years), medium (1-5 Years), and long-term priorities (5+ Years), this category helps coordinate efforts, align resources, and build momentum toward the community's goals and policy implementation.

Area Specific Recommendations

As outlined in Chapter 4, the Area Specific Recommendations are highlighted as tailored actions designed to address the overarching recommendations within each Area. By focusing on area-specific solutions, this category provides a roadmap for targeted investments and initiatives that support sustainable growth, protect local assets, and enhance quality of life in each community.

AMENDMENT PROCESS & UPDATES

In order to ensure that Plan Hamilton best reflects the existing conditions and future vision of Hamilton County, the Plan Hamilton update cycle shall be as follows:

- » Full Plan review - every five years
- » Annual review of policy and map changes - annual review by staff
- » Quarterly Plan Amendments - as necessary and when requested by the rezoning applicant
 - Zoning decisions are based primarily on area plans, which are components of the adopted general plan, in this case Plan Hamilton. The County's five different Area Plans were developed to include Place Type (land use) and capital improvement recommendations to inform rezoning requests.
 - Although the Planning Commission meets monthly, it will consider requests to amend the Area Plan quarterly.
 - Planning staff will consult with applicants to determine whether this type of amendment is necessary for a particular rezoning request.
 - An Area Plan amendment and its companion rezoning case may be heard on the same agenda.

Table 7: Implementation Matrix

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.1 Community Character & Land Use Patterns				
5.1.1 Access Management	Utilize TDOT's Highway System Access Manual for driveway spacing, median openings, and separation distances from signalized intersections.	Start with all State Routes where the existing TDOT Highway System Access Manual has standing. Expand to other principal arterials, minor arterials, and major collectors. Create manual, access management requirements, and corridor management plans before new development impacts are felt. Work with land owners to voluntarily contribute in-kind contributions (ROW, Design, Etc) or require development fees for a proportionate fair share of improvement costs as development applications are approved.		0-1 Years
	Target segments of suburban corridor with high rates of traffic congestion, safety incident history, or new development permit approvals. Improve traffic safety, congestion, pedestrian infrastructure and aesthetics by creating corridor management plans and agreements with state and local partners for high priority suburban corridors		TDOT Highway Access Manual	1-5 Years
5.1.2 Rural Corridors	Maintain rural corridor character including setbacks and vegetative buffers for new subdivisions.	All mapped Rural Corridor segments in the Conceptual Land Use and Place Type Maps and those designated in future map updates.	Lumpkin Co. GA Agricultural Preservation Area - Setbacks	0-1 Years
5.1.3 Centers	Work with land owners at Center locations to facilitate development, including district/center specific plan, according to center principles and preferred uses.	All designated center Place Types designated on current and future place type maps.		0-1 Years
	Once approved, partner with developers to install and construct streets and streetscape elements in the form of direct participation or financing vehicles like business improvement districts.	Focus joint development efforts on Village and Town Center areas with regional impacts. Expand to smaller centers where local governance and residents request implementation help and have previously participated in a small area plan.		5 + Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
	Create an Overlay Commercial Zone or District to provide site and building design standards or other guidelines so new commercial development adds value to the community and is compatible with the rural character sought.			0-2 Years
5.1.4 Conservation Subdivisions	Create a conservation subdivision option to cluster housing that features at least half of its potentially buildable land area devoted to undivided, permanently protected open space.	Conservation Subdivisions should be an opt in tool available to land owners who want to balance financial returns with conservation legacy. Creation of conservation subdivision provision in the county subdivision regulations will provide a tool to augment land purchase, and voluntary conservation efforts.	Williamson Co. TN - Updated Conservation Subdivision Standards NC Conservation Sub-Division Handbook	1-5 Years
	The use of an Overlay District, P.U.D. or Zone is recommended for implementation of more specific development criteria associated with each of the above Place Types.		Nashville - Explanation of Overlays and Development Standards	1-5 Years
	Establish Conservation Subdivision provisions and evaluation criteria in the subdivision ordinance.	All of these tools are necessary to preserve the continuity of productive agricultural land, riparian corridors, and recreational assets at a regional or landscape scale. This tool should be selectively applied in A-1 zoned areas adjacent to existing public land or with high conservation value.	University of GA - Conservation Subdivisions research	1-5 Years
5.1.5 Medium Density Residential	Co-locate future Medium Density Residential adjacent to Suburban Corridor and Center Place Types. Where future Medium Density Residential abuts a Suburban Corridor or Center allow zero lot line single-family and townhomes on a percentage of the overall property. Consider allowing small-scale multifamily in these same areas (6-12 units 3 story maximum).			5 + Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.2 Natural Resources				
5.2.1 Farmland and Riparian Corridor Protection	Build a stakeholder coalition including: NRCS, Trust for Public Land, Land Trust for Tennessee, North Chickamauga Creek Conservancy, Chattanooga Audubon Society, Land Conservation Assistance Network, Soil & Water Conservation District, Thrive Regional Partnership, Tennessee State and others to coordinate farmland and open space preservation efforts in Hamilton County.	Resident input from Areas 7, 9, 12, and 13 all emphasized a strong preference to preserve agricultural land uses, property, and rural character. All five planning areas include riparian corridors that if preserved would help to mitigate flood risks, provide opportunities for contiguous recreational and alternative transportation corridors, storm water quality, and habitat benefits. Development pressures are increasing across the county and in some areas the window for conservation efforts is limited. The time to begin building a coalition of landowners, conservation entities, and funding sources is now.	Thrive - Resilient Communities Program	0-1 Years
	Identify riparian corridors for preservation that have the potential to contribute multiple community benefits including farmland preservation, stormwater filtration, flood resilience, recreation, and habitat. Pursue strategies at landscape scale and on a property by property basis as development is proposed.	Prioritize: North Chickamauga Creek - (Area 8), Wolftever Creek, Johnson Branch - (Area 12), Long Savannah Creek - (Area 9) Falling Water Creek - (Area 7), Possum Creek, and Sale Creek - (Area 13).	America the Beautiful Grants	0-1 Years

REMAINDER OF PAGE IS INTENTIONALLY LEFT BLANK

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.2.1 Farmland and Riparian Corridor Protection <i>Continued</i>	Undertake a comprehensive assessment of active farms and prime agricultural land.	Farmland preservation is often a unifying place to begin conservation efforts. The first step is identifying the soils and parcels that characterize productive agricultural land. Local Soil and Water Conservation Office personnel and academic partners should be engaged in this process. Making tangible progress on the ground requires partnership between federal programs such as NRCS and local conservation groups who can bridge funding gaps and provide stewardship and monitoring support. Developing relationships with Agricultural land owners and the farming community in Area 13, the northern half of Area 9, and the eastern portions of Area 12 is a critical first step.	Farm and Ranch Lands Protection Program (FRPP) Info	0-1 Years
5.2.2 Recreation, Economy and Conservation Synergies	Engage UTC - School of Outdoor Recreation & Tourism Management in a study of potential economic impacts from resort recreation centers, greenway/recreational infrastructure investments, and corresponding riparian corridor preservation.			1-5 Years
	Build on existing successes like South Chickamauga Creek and Wolftever Creek. Invest or seek funding for agricultural demonstration projects, educational, and recreation assets.		St Louis Science Museum Grow Exhibit	1-5 Years
	Pursue partnerships to preserve forested land with an emphasis on areas that further regional trail connections, enhance access to unique recreational, historical, or cultural assets.	Cumberland Plateau in Area 7 and Area 13, Big Ridge Area 9, and White Oak Mountain Area 12.	USDA Forest Legacy Program	0-1 Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.2.2 Recreation, Economy and Conservation Synergies <i>Continued</i>	Pursue multiple creative mechanisms and funding for preserving critical recreation and natural resource assets. Look for opportunities to create value in these areas through recreational tourism, wetland or stream bank creation, and consider the value of reduced flood risks and other socio-environmental factors in assessing return on investments.		Revenues from Green Infrastructure - Parks & Recreation Magazine Forest, Farm, and Wildlife Incentive Programs in Tennessee State of Tennessee Landscape Management Plan Resources	
5.2.3 Resiliency, Natural Resource Protections, and Development Impact Mitigation	Establish natural resources protection standards for wooded areas, drainages, steep slopes, as well as currently regulated wetlands and streams.	Countywide		1-5 Years
5.3 Infrastructure & Transportation Network				
5.3.1 Connectivity & Congestion Management	Review fire code regarding the number of lots allowed in new subdivision triggering a secondary point of access.	Countywide	Williamson Co Tn Subdivision Connectivity Criteria	0-1 Years
	Require walking path or sidewalk for new residential subdivisions with connections to a safe harbor school bus waiting area.			0-1 Years
	In support of improved traffic safety and congestion management implement spacing requirements for both full and partial (restricted turn movement) intersections on arterial and major collector roadways. (1/4 mile for full access)	Countywide on Arterials and Major Collectors	Street and Subdivision Connectivity Model Ordinance	0-1 Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.3.1 Connectivity & Congestion Management <i>Continued</i>	In support of improved traffic safety and congestion management consider modifications to the subdivision ordinance implementing internal connectivity index standards for developments of more than 500 lots.		Franklin TN Zoning - Circulation Connectivity	1-5 Years
5.3.2 Improvements to Local Roads, Intersections, and Safety Design Features	Follow the Hamilton County Transportation Project Priorities List in this document. Continue to invest County funds and leverage with State and Federal funds to make continuous progress on deferred transportation improvements.	Countywide	Appendix E	0-1 Years On - going
	Explore the use of alternative financing vehicles such as Tennessee's State Infrastructure Bank to amplify County investments.			0-1 Years
5.3.3 Sewage Treatment Capacity and Collection System	Continue to build system storage capacity, resilience for storm events, and greater predictability / flexibility to plan collection system expansion or new treatment capacity. Continue to pursue WIFIA and other capital funding specific to water and wastewater.			On - Going
	Target financing solutions and infrastructure investment to areas that have been identified as suitable for future growth. Proactively plan to shore up capacity or extend collection systems to these areas as necessary to better balance growth impacts.	See Funding Mechanisms		On - Going
	Add further specificity and criteria for utilization of decentralized sewage treatment systems.			0-1 Years
	Evaluate whether tap fees are keeping pace with infrastructure			0-1 Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.3.3 Sewage Treatment Capacity and Collection System <i>Continued</i>	Evaluate decentralized systems and track projects using the systems to determine rules for use.			1-5 Years
	Evaluate the use of trilateral agreements to add flexibility, predictability, and fairness for developers who choose to collaborate with WWTa in design and construction modifications for future capacity to recoup costs of infrastructure developed beyond project needs.		San Antonio Water System - Trilateral Agreements Framework for in-kind contributions	1-5 Years
5.3.4 Stormwater Infrastructure, LID Features, and Resiliency	Provide resources for complete and expeditious review of stormwater plans including pre-construction site review and post construction inspections.		Hamilton Co. TN Stormwater Rules & Regulations	0-1 Years
	Begin codifying more of Hamilton Co Stormwater quality BMP's.		Hamilton Co. TN Stormwater BMP Guidelines	1-5 Years
	Phase in additional resources for review and enforcement.		Wilson Co. TN Stormwater Ordinance	1-5 Years
	Develop a more comprehensive approach to stormwater site assessment, design, incentives, and regulations.		City of Ft. Wayne, IN Stormwater Regulations Incentives	1-5 Years
	Implement stormwater fee structures that incentivize BMP's.		Ft. Wayne, IN Stormwater Rate Structure ERU reduction incentives	1-5 Years
	Evaluate establishing a program for neighborhood or watershed based storm water infrastructure to capture storm water closer to where it falls and reduce combined sewer flows.		Philadelphia Stormwater Management Manual	0-1 Years
	Develop policy with WWTa on decentralized sewer systems with robust criteria and design standards	Countywide		0-1 Years

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.3.5 Fire & EMS	Consider the findings of the Fire and Rescue Services Evaluation March 2024 to identify future service improvements.			0-1 Years
	Evaluate sources of funding to increase full-time personnel and standardize equipment purchases and training to simplify inter-local agreements.			
5.4 Economic Health & Community Opportunity				
5.4.1 Resort Recreation Centers	Engage land owners where resort recreation centers have been identified to participate in small area plans or joint planning sessions. Work to provide examples that would establish the scale and scope of future projects. Help landowners or potential developers understand infrastructure requirements, neighborhood concerns, and connect them with resources to create plans compatible with goals for this place type.	Prioritize land near designated Resort Recreation Centers and with close proximity to existing state and regional recreational facilities and natural areas.	Dancing Bear Lodge - Example of Resort Recreation Doe Mountain Governance & Operations Conservancy at Doe Mountain	0-1 Years
	Require that resort recreational development on lands adjacent to public land or waterways be a catalyst for securing and enhancing public access to recreational assets in addition to creating private recreational development.	Countywide in designated centers	APA PAS Report on Waterfront Resort Development	0-1 Years
	Look for partners to start a recreation and tourism based business incubator/accelerator program.		UPLIFT NC Tourism Incubator & Accelerator Hospitality & Tourism Incubation Resources Clearwater Tourism Incubator	1-5 Years

Policy Subcategory	Recommendation	Applicability	Case Study / Example Ordinance	Timing
5.4.1 Resort Recreation Centers <i>Continued</i>	Engage UTC School of Sport, Outdoor Recreation and Tourism Management in a study of potential economic impacts from resort recreation centers, greenway/recreational infrastructure investments, and corresponding riparian corridor preservation.			1-5 Years
	Engage Tennessee Department of Tourism, Chattanooga Tourism Co, SETDD, and SETTA in creating a small recreational resort promotional plan and programming assistance.		Southeast Tennessee Tourism Association State of Tennessee Rural Tourism & Destination Development	0-1 Years
	Explore potential for agriculture based resort or event centers to contribute to agricultural revenue streams. Consider McDonald Farm as a potential case study for synergies between rural resort economic development, traditional agriculture, and recreation.	Sale Creek - McDonald Farm; Birchwood		0-1 Years
	Evaluate outcomes from existing case studies - including preservation goals, impacts on existing farms, housing costs, property taxes, etc.		Serenbe Farms Olivette, NC Willowsford, VA	
	Study Industrial opportunities - both as larger industrial/corporate scaler and smaller Maker District			
5.4.2 Growing the job Base	Pursue development study of future employment centers including emerging industries and manufacturing districts			

Policy Subcategory	Recommendations	Applicability	Case Study / Example Ordinance	Timing
5.5 Funding Mechanisms				
5.5.1	Consider use of RIDA as an incentive for developers who voluntarily meet specific infrastructure standards such as: improved street and pedestrian connectivity, LID stormwater improvements, provide easements for regional greenways, trails, or watershed protection.		Residential Infrastructure Development Act of 2024 (RIDA)	0-1 Years
	Explore use of alternate funding mechanisms such as TDOT's State Industrial Access (SIA) Program	Hilltop Drive Extension; matching funds for other prioritized projects	TCED Report - The Power of Road Infrastructure	0-1 Years
	Consider strategic utilization of Business Improvement Districts, Tax Increment Financing, Trilateral Agreements, or Infrastructure Trust Funds to set the table for desired development patterns (sidewalks/ connectivity, roads and utility infrastructure, landscape buffers, LID enhancements) in identified current and future centers. (Village Centers, Neighborhood Centers, Neighborhood Nodes, Maker Districts, etc.) i.e. Joint Development		San Antonio Water System - Trilateral Agreements Framework for in-kind contributions	1-5 Years
	Use the Capital Funding for Mid-Sized Cities & Counties study as a guide to identifying innovative funding and financing approaches for capital improvements.

Q1 We have divided the county into thirteen areas for more focused planning, and five of these areas are in the unincorporated portions of Hamilton County. See the map below. Which of these five areas are you most interested in? It is probably the area you live in, but it could be another area where you work, spend time, or own a business or other property. Think about that same area when answering the questions that follow.

Answered: 203 Skipped: 0

	AREA 7: WALDEN PLATEAU	AREA 8: MIDDLE VALLEY / LAKESITE	AREA 9: NORTHEAST COUNTY	AREA 12: WHITE OAK MOUNTAIN	AREA 13: NORTH END / SODDY-DAISY	OTHER (PLEASE SPECIFY)	TOTAL

Meeting Discussion Notes

Solar Farms: Where are they located; what's the process of permitting the back-up battery for the farm; does it already need a permit? What requirements are there for public notification of this development? What are the requirements, standards, and risks for siting the back-up battery?

What is the plan for schools? Expansion, amenities and maintenance needed, from playgrounds to facilities. Accommodating changing population? Staffing?

100+ apartments being built? Check about what, where, and how they came to be permitted.

What is the timeframe for planning? *STAFF: There is no specific deadline, but completion is anticipated by summer of 2024.*

McDonald Farm; part in Rhea County, how are we working with them? Infrastructure is needed for future development; people would like to see a park there; Has flooding been addressed?

Emergency Services: Need better or faster service.

Water lines lacking in some areas: There are pressure issues [*i.e. lack of water pressure*], and broken lines. Areas of concern: Coulterville, Hwy 27, Graysville.

Volunteer Fire Service: We need more volunteers and/or need more resources (money, equipment and staffing).

Preserve family farms & rural land.

Current Zoning: What's going to happen to it with this new plan rolling out?

Trash & illegal dumping. *STAFF: The County bought a new truck, which should improve service.*

Community Comment Cards

Lacks a playground that is available to the public during school hours (only playground is at North Hamilton County Elem); Food desert - desperately need fresh, healthy foods (not Dollar General); Safe place to walk/exercise - would love McDonald Farm to be styled similar to Greenway Farms; Please know that not all residents are resistant to change and progress. My family wants to embrace thoughtful progression; Please do not make our school a mega-school. I work at NHCE and what makes it so special is the teacher-student ratio. Our teachers know almost every single child in the school building. All teachers know all the students. That is rare and so very special and important to building relationships, building community.

Education programs with UT/TSU, 4-H, FFA programs at the farm property;

Outdoor recreation parks at McDonald Farm;

Land to grow fruits, vegetables; meat for community consumption on farm property;

Keep dark skies at night!!!, reduced light pollution;

Greenspace; *parks and walking paths around Sale Creek;

Keep farms/protect established farms;

Be mindful of wildlife so what's left is not further reduced

If you are expanding for growth: How are you going to address emergency (ambulance service) & need for more than a volunteer Fire Dept.;

* What about how traffic is going to affect those who live around McDonald Farm?;

* What about their privacy?;

* No apartments, not wanted in this area;

* We moved to this area to get out of the city; we don't want it industrialized;

* If you want to preserve our area, stop short-term vacation rentals; we don't want them up here!

Keeping our area rural; Keep this a single family home community; Keep our schools up to date; Develop a public park for McDonald Farm, we don't have one at all, kayak/canoe

Short-term vacation rentals zoning, not in residential area; No outside investors coming in & buying up properties to make into AirBnBs; Appearance of commercial properties; trash & recycling centers; electric grid - many power outages in north end of county; more oversight on zoning for electrical grid, solar; ambulance service; fire service; brick construction required & signage standards.

Northern Hamilton County needs public transportation to use to commute to work in Chattanooga. Maybe approach CARTA about reintroducing bus service to Soddy-Daisy. CARTA ran a route into the city, but has ceased due to lack of ridership and monetary constraints. Things have changed and we have more out of towners visiting Soddy-Daisy for tourism and the population has grown significantly. Public transportation could be utilized to bus or shuttle our elderly population to the senior center or appointments. Perhaps inter-modal or multi-modal services for meeting our transportation needs.; we would love some sidewalks in Soddy-Daisy.

Nada; no changes, nothing, zip, zilch, we need an ambulance.

Establish a trailhead for the Cumberland Trail at McDonald Farm - (would also connect to the Great Eastern Trail); Protect the water quality and the natural flow of the Rock, Possum, and Soddy Creeks as well as their natural scenic beauty; Work to inform decision makers to provide regulation for above goals and for responsible development goals that protect watershed.

Protect watershed, access, integrity of North Chickamauga Creek & gorge buffers; Protect access for all citizens to our natural areas; Limit/ban steep slope excavation and borrow pits/fill area in floodway and 100 year flood plains.

Question - Are there any long term plans to connect the county with a bridge over the TN river - Soddy to Harrison?

Roads & schools should be in place or concrete plans before subdivisions are approved; Developments/subdivisions need to address fire hydrants; how will existing land usage figure into deciding on areas of various density?; Zoning commission needs better guidelines before issuing permits.

City water needs to be available on Oakdale Rd-parts of May Rd do not have city water as well; City sewer needed on Hwy 27 in Sale Creek; dine in restaurants are needed in Sale Creek; power lines need upgrading.

Big parks, trails

Add a winery with fire pits, views, shaded area, wood fired pizza, and an open area for music festivals at McDonald Farm

Severe need currently for restaurants and shopping areas (like Cambridge Square in Ooltewah); no place to have a nice dinner out; grocery store needed as well.

Power is unreliable, old lines, too many outages.

Better fire service on Pickett Rd, the nearest hydrant to my home is approximately 2,000 feet.

Health is a major issue across the area; linear park - rails to trails with restrooms and parking; people are too overweight, need a place to walk as a start; local place where people can safely get healthier!

Parks at the farm; hospitals; schools; roads; trails.

Tree Ordinance: I live on Armstrong Rd. Our beautiful woodlands that house the gorgeous wildlife of our area have been clear cut by the hundreds of acres to put in subdivisions. We need to have a tree ordinance to hold developers accountable. Private landowners should be able to do whatever they want. Developers should be required to leave some trees.; Utilities: We love our Bakewell Union Fork water. It runs dry during droughts and we have to have Soddy water piped in . We don't like Soddy water, but with much more growth, it will have to be piped in all the time. Can we plan for water utility growth so we can keep our good water? If we wanted Soddy water we'd have moved to Soddy long ago. Sprinklers & hydrants on different water sources!!; Collaborate with Rhea County: In order for us to complement each other, we need to plan together.

Permitting process for solar farm; solar panels, battery storage.

Saving green space around "Sale Creek" (trails/parks); controlled growth; roads (widening, surfacing).

Hiking/biking trails; Parks/nature areas; Secondary road upgrades; McDonald Farm.

Secondary & tertiary road shoulders: Add or increase shoulder width; repair water run-off erosion, culverts?; anti litter program; bicycle lanes and paved trails

Speed on Dallas Hollow Road is dangerous w/o shoulders; What about the 200+ acres on Dallas Hollow Rd?; Why can't owners rent to whomever they'd like?

Very dangerous intersection at the north terminus of Dallas Hollow Road; no more apartments.

Please think about traffic before development. The traffic in other parts of county is horrendous!; Ticket those who litter: Issue tickets to increase funding; there is always trash on the sides of roads; Trash pickup services; Sidewalks.

Parks; green space; No apartments; No water treatment plants; No dumps.

Sidewalks; Street drainage; Top notch marina with great restaurants; Parks; Bury electrical lines underground.

Traffic; Oversight on zoning and permitting; Schools and traffic from schools; Taxes; Utility costs.

Sewer - so restaurants can come in (sit down); Worried about more traffic; Comment: Glad McDonald Farm is finally getting its glory!; Need park for our children and grandchildren; used by our school.

Sequoyah Road - Needs to be 6-8 lanes before the new school & expansion happens; repaved completely; More people will be moving that direction.

Traffic; Schools: - growth; Road repairs: - Daugherty Ferry Rd (road breaking off) Tree overgrowth on roads; *park is the only thing I'm interested in.

Concerns: Emergency Services - Fire protection - currently as a SD resident, we are dependent on a volunteer service. They are great but probably need more. Ambulance; golf course; commitment for NO prison/homeless encampments.

We have a beautiful area to live BUT there's trash along most roads. There's no signs regarding fines or reporting those that do litter, not just McDonalds - boxes, mattresses, furniture & tires. I've heard no county official talk on TV or elsewhere encouraging creating a beautiful living space, stopping litter. It's very sad to see and for visitors from other countries to witness.; Roads that are horrible: McCallie Ferry, May Road, Lee Pike; Please, please, help to save our land, Thank You.

TRASH! TRASH! TRASH! *Our roads are totally littered; so embarrassing to visitors & residents - May Rd, Lee Pike, McCallie Ferry Rd are just dump sites; *I see no effort to sign nor enforce litter problems. The only "dump site" was closed for some reason; *This must be addressed to encourage proper growth in our community!!!

Is there any retail development planned for unincorporated Soddy Daisy (Emerald Bay, Armstrong, The Farms, etc.) we currently drive 15+ minutes to a grocery store or restaurants. I would love to see some retail development closer to these developing communities.

A bridge over the river in the Lakesite area connecting route 319 to route 58; Publix & Costco; Parks w/live music.

Residential areas such as A1, R1, & R2 should not have commercial business; Commercial businesses need to be in commercial zoning; STVR's are commercial/businesses.

Join the Cumberland Trail, not have to walk over.

Jake Brake Restrictions on Hwy 27 in Bakewell near red light @ Circle K - The Harrison Mobile Home park is affected by the noise from Jake Brakes.

Things I do NOT agree with: Taxes on our property after its paid off-do we really own our homes?; Smart cities; Climate action plans; All different ages in one school and or buses. What I would like to see in our area: Safe hang out space for teenagers (skate parks); Education in our schools not indoctrination; Water fountains & apple trees in parks.

Sidewalks on Dayton Pike - Soddy; Running trail is needed; More underground power lines; Cell towers.

A running/walking/biking type trail is much needed in the Soddy area; *the closest one is Riverview Park in Chattanooga, we need that here; Update Bakewell Utility District water lines. The water lines frequently break resulting in NO water.

For the Park (all separately): bike trails; horseback riding trails; running trails; hiking trails; playground; splash pad; olympic size pool.

Infrastructure: Start a program/funding for infrastructure by charging developers a fee (\$ per linear foot of road frontage) to pay for upgrades; Screening on new subdivision developments (landscape/buffer zones) when put next to existing housing.

Preserve natural resources; address utility access; comprehensive traffic plan; littering/waste management; focus on sustainability; more sidewalks.

As more people & industry move in, what happens to planning about trash collection, what about planning & placement of a new dump?; There's a fear with current roads, it won't handle huge growth and influx of traffic. Also concern that new road growth will cause major traffic disruptions while construction takes place.

NORTH CHICKAMAUGA CREEK CONSERVANCY: Priority focus planning recommendations: 1. Specific stringent development ordinances regarding land disturbances/excavation and development near the banks of the North Chickamauga Creek and its tributaries to ensure responsible development affecting the creek and watershed, including regulations and incentives to protect pervious watershed. 2. Responsible approach to limiting increased zoning densities near the creek and in sensitive watershed areas. 3. Stricter timely enforcement and compliance with water quality regulations and MS4 requirements. 4. Recognition of the recreational opportunities of North Chickamauga Creek and protection of and prioritization of recreational access points throughout the watershed, including TWRA, TN State Parks, and City of Chattanooga properties along the creek. 5. Programs to educate the public, including residents, developers, and decision makers, about the North Chickamauga Creek and its immense presence and value to our community.

Hamilton County
Transportation Project Recommendations

Priority Group	Roadway	Project Location	Area	Type of Improvement	Warranting Condition	Preliminary Project Cost
Medium-Term	Roberts Mill Road	from Dayton Pike to Mountain Laurel Trail	7	Safety	Crash Rate	\$2M-\$3M

Objectives

A primary principle of the Chattanooga-Hamilton County Regional Planning Agency (RPA) and the Hamilton County Public Works department is to provide for the health, safety, and welfare of the community. To this end, these agencies contracted Tri-Star Public Solutions, LLC to conduct an evaluation of fire and emergency response in geographic areas of the county outside the municipal boundaries of the city of Chattanooga. The scope of the study is an evaluation of the demographic and response characteristics of fire departments operating in the unincorporated areas of Hamilton County, Tennessee, including:

- Current levels of fire protection service and identification of future needs based on planning projections.
- Geographic coverage and performance of individual fire station locations in terms of response time (turnout and travel time to scene).
- Statistically significant areas of response time differences.
- Areas of greatest density of demand and coverage gaps.
- Current staffing levels and alternative staffing models to address projected demographic changes and growth projections.
- Multi-year incident data and classification by incident type and characteristics of response time by time of day and day of week.
- Geographic areas of growth trends by station based on building permit location and other development activity.

This study is not intended to be a management review of the individual department's operational management and leadership, or activities of the board of directors for the independent volunteer fire departments.

Fire Service Background

The fire service in Hamilton County has evolved over time as have most counties have across the state. Growth in communities outside the city limits precipitated the need for an organized fire suppression response. Each department has a unique story of when that occurred and what key events happened to bring about change. Fast forward to present times, the county is served by eight independent not-for-profit organizations each managed by its board of directors.

County Engagement

The Hamilton County Office of Emergency Management /Homeland Security (OEM) coordinates response and training activities for eight volunteer fire departments. More specifically, OEM works closely with each of the independent fire departments and other Hamilton County departments (Finance, Engineering, Planning, GIS, and Emergency Medical Service) to support VFDs with such functions as training, capital projects, biennial audits, geographic information systems products, and securing grants.

The Hamilton County Hazardous Materials Response team provides hazardous materials response across the county and within the State of Tennessee Homeland Security District 3 when requested. The team is funded by the county and with Homeland Security grant funds. The Office of Emergency Management operates the team and staff is provided by personnel from OEM staff, firefighters, emergency services personnel and chemical facility employees.

2024 Hamilton County Fire Protection Study

Countywide fire training is planned and provided by full-time staff of OEM. The fire training program delivers Firefighter I and II classes each year to support the needs of the volunteer fire departments.

The county also operates the Fire Marshal's office to ensure that new construction and development meets the minimum criteria of fire prevention codes and safety regulations. This is a proactive effort to improve the quality of life and safety for the business community, citizens of the county, and fire suppression personnel.

Dispatch services are provided by Hamilton County 9-1-1. The fees for dispatching are provided by the county. Additionally, the fire and emergency services personnel operate on an advanced emergency communications network (radio system). The radio system provides reliable countywide and statewide system connectivity for the volunteer fire departments to utilize for emergency response and administrative communications. The system is made up of servers, towers, communications circuits, mobile radios, and portable radios that are supplied by the county.

In addition to the in-kind services outlined above, the county provides a significant amount of funding for capital outlay and operational expenditures to the volunteer departments. This will be explored further in the Facilities and Funding sections of this report.

Municipalities

The municipal fire departments in Hamilton County do not provide primary fire and rescue response outside of their corporate limits. The municipal departments, along with the volunteer departments in the county, do participate in the Tri-State Mutual Aid System and the Tennessee Mutual Aid System. The mutual aid systems allow local authorities to request aid and assistance for fires, technical rescue, and natural/human-caused disasters. The access to these systems augments service gaps and capabilities that the volunteer departments experience to varying frequencies dependent on the department and nature or complexity of the incident. While the scope of the project is not on the municipal departments, some data from those departments are included in the report for overall awareness and comparison.

2024 Hamilton County Fire Protection Study

Facilities

Hamilton County has maintained an aggressive building campaign of fire station facilities. Table 1 shows that of the 24 facilities providing first due response coverage to the unincorporated portions of the county, 18 are owned by Hamilton County government. (Table 1 does not include Tri-Community Station 7 as it is located on the same property as Station 1). This program has been considered a model that other counties across the state have looked to as they try to address public safety issues locally.

Table 1. Fire Station Facility Ownership and Staffing

Department	Station #	Ownership	Ownership Details	Facility Capable of 24-hour staffing?

Population and Structure Characteristics of Study Area

County Population and Fire Station Location

The primary geographic scope of the study area is the unincorporated portion of Hamilton County. Fire protection needs of this area are served by volunteer fire departments, which also serve some incorporated cities within the county that do not operate independent municipal fire departments. The

2024 Hamilton County Fire Protection Study

primary population and other demographic data used in this study are RPA county data and reports and data referenced by these studies, including U.S. Census data. Census data sources used in this report include population from Annual and Cumulative Estimates of Resident Population Change for Counties and County Rankings: April 1, 2020, to July 1, 2022 (CO-EST2022-CHG). The area of incorporated cities is calculated using State of Tennessee Strategic Technology Solutions (STS) GIS TN City Boundaries.

Table 2. Population and Area of Hamilton County Incorporated and Unincorporated Area

City/Area	Census 4/1/2020	Census Est. 7/1/2022	Percent of Total County	Square Miles	Percent of Total County
Chattanooga	181,057	184,086	49.10%	142.4	26.30%
Collegedale	11,103	11,255	3.00%	11.2	2.10%
East Ridge	22,162	21,936	5.90%	8.4	1.50%
Lakesite	1,857	1,915	0.50%	1.7	0.30%
Lookout Mountain	2,059	2,050	0.50%	1.3	0.20%
Red Bank	11,902	11,959	3.20%	6.6	1.20%
Ridgeside	447	447	0.10%	0.2	<0.01%
Signal Mountain	8,846	8,883	2.40%	8.4	1.50%
Soddy-Daisy	13,066	13,159	3.50%	24	4.40%
Walden	1,982	1,973	0.50%	3.5	0.70%
Unincorporated*	111,734	117,019	31.20%	334.6	61.70%
Total Excluding Chattanooga	185,158	190,596	50.90%	399.9	73.80%
Total County	366,215	374,682	100%	542.2	100%

*Computed as remainder

Excluding Chattanooga, about 51 percent of the population of the county is served by municipal and volunteer fire departments. These are:

- Dallas Bay Volunteer Fire Department and Rescue (Dallas Bay VFD)
- East Ridge Fire Rescue (East Ridge FD)
- Flat Top Volunteer Fire Department (Flat Top VFD)
- Highway 58 Volunteer Fire Department (Highway 58 VFD)
- Lookout Mountain Fire Department (Lookout Mountain FD)
- Mowbray Volunteer Fire Department (Mowbray VFD)
- Red Bank Fire Department (Red Bank FD)
- Sale Creek Volunteer Fire and Rescue Fire Department (Sales Creek VFRD)
- Sequoyah Volunteer Fire Department (Sequoyah VFD)
- Signal Mountain Fire Department (Signal Mountain FD)
- Soddy-Daisy Fire Department (Soddy-Daisy FD)
- Tri-Community Volunteer Fire Department (Tri-Community VFD)
- Waldens Ridge Emergency Services (Waldens Ridge ES)

2024 Hamilton County Fire Protection Study

At the time of this report, these agencies collectively operated fire stations at 34 locations, excluding administrative offices. Twenty-four of these are volunteer fire stations, while municipal fire departments serve East Ridge, Lookout Mountain, Red Bank, Signal Mountain, and Soddy-Daisy. Figure 1 shows the location of these stations along with municipal boundaries.

Emergency call incidents are assigned to individual battalions within fire departments by the Hamilton County 9-1-1 Unified Emergency Communications District (Hamilton County 9-1-1). Emergencies requiring specialized technical response such as hazardous materials, aircraft crashes, and marine rescue are assigned to units with countywide jurisdiction. Other incidents are assigned based on incident location. Emergency Service Number (ESN) boundaries, a standard used for geographic assignment by emergency dispatch agencies, generally conform to municipal boundaries. Unincorporated areas with Hamilton County are all assigned to ESN 006. Hamilton County uses emergency response areas (“Response Areas”), a subset of ESNs, to make dispatch assignments for calls based on proximity. Individual fire departments in Hamilton County may have one or more emergency response areas, as shown in Figure 2.

The primary geographic unit of observation for this study are response areas outside the City of Chattanooga, also excluding those in the Red Bank, Lookout Mountain, and East Ridge Fire Departments, which are landlocked by the city. To simplify this analysis, some emergency response areas have been omitted where little or no response incidents have been recorded. Also, the multiple response areas in the Tri-Community Volunteer Fire Department have been consolidated into six response areas: 1) **Tri-Community VFD 1**, which includes incidents dispatched to Battalions TCFD 1, TCFD 1-3, TCFD 1-4, and TCFD 1_5, 2); **Tri-Community VFD CH**, which includes incidents for Battalions TCFD 2_1 CH and TCFD 23_4 CH and which encompasses a section of Chattanooga along 1-75 extending into the Tri-Community VFD; 3) **Tri-Community VFD 3**, including TCFD 3 and TCFD 3-5 dispatches; 4); **Tri-Community VFD 4**, including TCFD 4 dispatches; 5) **Tri-Community VFD 5**, including TCFD 5 dispatched incidents and 6) **Tri-Community VFD 5-3**, which could have been grouped into VFD 5, but which separately reviewed allows more detailed analysis of the most populated response area. Figure 3 shows the boundaries of the response areas selected for detailed study in this report (the Study Area).

The study includes all the unincorporated area of Hamilton County, which is served by volunteer fire departments. Volunteer fire departments also serve the incorporated areas of Collegedale, Lakesite, and Walden. The total population of the service area of Hamilton County volunteer fire departments is 124,522, 94 percent of which is the population of the unincorporated area of the county, as derived from 2020 census data. The study area also includes for some comparative analyses the response areas in two municipal fire departments, Soddy-Daisy Fire Department and Signal Mountain Fire Department, bringing the total population of the study area to 146,503, or about 40 percent of the total county (2020 Census). Population for each response area is estimated using centroids of 2020 census blocks (Table 3).

The population per square mile is highest in the highest in response areas bordering Chattanooga, decreasing in relation to distance from the city to the north and west, as shown in Figure 4, which also displays building footprints. The highest concentrations of population can be inferred from the kernel density plot (Figure 5) of Next Generation 9-1-1 address points, also referenced as Enhanced 911 (E-911) addresses, assigned by the Hamilton County GIS Department in association with the Hamilton County 9-1-1 District. These addresses may include properties at which no current structure exists, such as subdivision plats.

2024 Hamilton County Fire Protection Study

Future growth patterns in the county have been examined in several RPA plans and studies. For example, real estate market trends were examined by the Bleak Advisory Group for the RPA¹, which concluded that real estate demand will be driven by a continued trend towards suburban growth, access to jobs and transportation infrastructure. The North County area centered on Soddy-Daisy should continue to attract residential and commercial development for an increasing number of future residents seeking a more rural life style (Figure 6). The highest area for both commercial and residential demand is the East Brainerd/Ooltewah area, which encompasses much of the response areas of the Tri-Community VFD.

Figure 6. Real Estate Market Trends (Adapted from Bleakly Advisory Group 2016)

The RPA examined connectivity characteristics in the county road network that might impair the most efficient delivery of emergency response services². The study modeled three connectivity attributes: 1) the ratio of segments between intersections or from intersections to the number of intersections or endpoints of a dead-end street; 2) the ratio of actual street intersection nodes to dangle nodes (dead end streets); and 3) block length, where shorter blocks provide more route options between destinations. From these attributes, a composite connectivity level by census tract was derived. Figure 7 shows that the study area does not contain any Level 5 composite connectivity level classes – the level with the greatest connectivity. The Signal Mountain Fire Department Response Area has a Level 4 class, but most of the Study Area is classified as Level 2 or Level 3. All Flat Top VFD and Highway 58 VFD 3, and most of Mowbray VFD and Highway 58 VFD 5 are classified as Level 1.

**Figure 7. Road Network Composite Connectivity Levels**

2024 Hamilton County Fire Protection Study

Investments in transportation connectivity and other transportation structure improvements will be made according to projected population density and regional development intensity levels. According to the RPA Comprehensive Plan³, the population of Hamilton County is expected to increase by about 60,000 to 90,000 people over the next 25 years, or about 17 percent to 25 percent. Several areas in the county are already in parks or other areas protected from development. To support the health, safety, and welfare of the community, the RPA plan identifies five levels of development intensity to guide this future growth. Lands classified as Level 1 lands are sparsely populated with little development or road networks that could support intensive development. The most intensive class is lands in Level 5, which are highly populated and in which high road density, proximity to major intersections and intersections to major-minor networks make future development highly suitable. The east and west portions of the Study Area are particularly constrained from intensive development, with high proportions of Protected and Level 1 lands (Figure 8).

The most recent large-scale analysis of future population growth available for this study is provided by the Chattanooga-Hamilton County/North Georgia Transportation Planning Organization (TPO), which projects population and other demographics by census delineated Traffic Analysis Zones (TAZs). Using TAZ GIS polygons with 2050 projected population values, the current study estimates 2050 population values for each study area fire department. Population values of TAZ polygons that overlapped fire department district boundaries were split and allocated between departments using a population-weighted distribution, with the number of E-911 addresses in each split polygon as the weight value. These projections were used to calculate a percentage increase from the current population estimated for each department using 2020 census blocks (Figure 9). This method projects the greatest population increases in the Tri-Community VFD (33.1%) and the Sale Creek VFRD (26.4%), followed by the Dallas Bay VFD (20.3%) and the Highway 58 VFD (20.1%). The lowest increases would occur in the Flat Top VFD, the Mowbray VFD, and the Waldens Ridge ES (all <3%).

The differing potential negative effects on communities in the study area caused by external stresses on human health can be depicted by the Social Vulnerability Index. This index was created by the Centers for Disease Control/Agency for Toxic Substances and Disease Registry (CDC/ATSDR SVI)⁴. The index aggregates 16 census data variables related to household characteristics, socioeconomic status, racial and ethnic minority status, and housing type and characteristics to assess which communities might be most vulnerable to natural or human caused disasters. Figure 10 highlights the overall SVI for census tracts in the study area overlaid with response area boundaries, with the index value signifying the percentile value of vulnerability compared to all other Tennessee census tracts. A value of 1 is the highest social vulnerability.

Figure 11 represents the social vulnerability index for the study area by the four themes that group variables that make up the index:

1) **Socioeconomic Status** (Poverty Level, Unemployed, Housing Cost Burden, Lower Education, No Health Insurance);

³ Renewing Our Vision. Comprehensive Plan Update 2030 – Phase I of Growing Forward Adopted May 14, 2016. Amended 2021)

⁴ Centers for Disease Control and Prevention/ Agency for Toxic Substances and Disease Registry/ Geospatial Research, Analysis, and Services Program. CDC/ATSDR Social Vulnerability Index 2020 Database Tennessee https://www.atsdr.cdc.gov/placeandhealth/svi/data_documentation_download.html. Accessed on 12/22/2023.

2024 Hamilton County Fire Protection Study

2) **Household Characteristics** (Age 65+, Age 17-, Disability, Single-Parent Households, English Language Proficiency;

3) **Racial and Ethnic Minority Status;**

4) **Housing Type & Transportation** (Multi-Unit Structures, Mobile Homes, Crowding, No Vehicle, Group Quarters).

The tracts in the eastern portion of Sale Creek VFRD and the northern portion of Tri-Community VFD rank slightly above the 50th percentile for vulnerability related to socioeconomic status. The index for the Housing Characteristic theme is particularly high in the northern portion of the Highway 58 VFD, and higher than 50th percentile for census tracts in Sale Creek VFRD, Flat Top VFD and Mowbray VFD, and portions of the Tri-Community VFD. Housing and transportation have high percentile index values for northern Highway 58 VFD and the northern and northeast portion of Tri-Community VFD.

The Social Vulnerability Index is only one of the assessments used by FEMA to assist in mitigation planning, hazard mitigation assistance and risk communication. Another is the National Risk Index, which assesses natural hazard risk by county and by census tract and evaluates risk as a combination of the hazards, social vulnerability, expected annual loss, and community resilience. Compared to national risk levels by county, the national risk index for Hamilton County is rated as relatively moderate, driven by the denser population, infrastructure, and social vulnerability of Chattanooga and by the natural hazards the county is subject to. The remainder of the county has a lower risk index (Figure 12). However, the study area is subject to several natural hazards and the county has a robust and well-documented multijurisdictional natural hazards mitigation plan overseen by the Office of Emergency Management and Homeland Security⁵. These hazards are not analyzed in detail here, but rankings of Riverine Flooding, Lightning, Tornado, and Winter Weather as shown by census tract are included in Figure 13.

Building Permit Activity and Structure Characteristics

Building permit data for five years beginning July 1, 2018, through June 30, 2023, were evaluated for activity patterns in response areas. Most permits are issued for new construction and AAC (additions/ alterations/ conversions) but are less commonly issued for demolitions, moves, and other categories.

Table 4. Building Permits by Type

	AAC	Demo	Move	New	Other	Total
Dallas Bay VFD 1	184	22		332	26	564
Dallas Bay VFD 2	431	11		256	29	727

Soddy-Daisy FD 1	118	23		82	8	231
Soddy-Daisy FD 2	141	32		195	2	370
Soddy-Daisy FD 3	104	13		71	21	209
Tri-Community VFD 1	279			294	15	588
Tri-Community VFD 3	148	6		515	18	687
Tri-Community VFD 4	319	23	1	772	46	1,161
Tri-Community VFD 5	580	102		506	27	1,215
Tri-Community VFD 5-3	130	5		171	22	328
Tri-Community VFD CH	64	4		35	1	104
Waldens Ridge ES	269	13		313	28	623
Total	5,242	336	3	5,562	582	11,725

Permit activity for all permits is shown by year by response area in Figure 14. The Tri-Community VFD accounted for over one-third of permits issued during this period, with the Tri-Community VFD 5 response area receiving the most permits. Sale Creek VFRD and Highway 58 VFRD 2 had the next highest number of permits among VFD response areas, followed closely by Dallas Bay VFD 2. The permits do not reflect the number of approved subdivision plats that are planned or approved. The new construction will continue to strain the emergency services systems as growth continues throughout the county.

2024 Hamilton County Fire Protection Study

Figure 14. Building Permits All Categories by Response Area and Year

Average annual permits by response area and new permit construction totals are symbolized on Figure 15 and Figure 16 respectively. The Tri-Community VFD 4 response area has the highest number of permits for both new construction and all permit types. New construction permit activity is high throughout the Tri-Community VFD outside Collegedale and in the Sale Creek VFRD zone.

2024 Hamilton County Fire Protection Study

Although new construction permit activity is correlated to population within a response area, the rate of construction in relation to current building stock is an indicator of locations of highest growth within the county. Figure 17 shows the percentage of total buildings within each response area represented by total new construction during the five-year period. Five-year permit activity in Flat Top VFD and Highway 58 VFD 5 response areas is highest among response areas in the study area by this metric. Tri-Community VFD 3 in the eastern portion of the Tri-Community VFD also has a high permit rate.

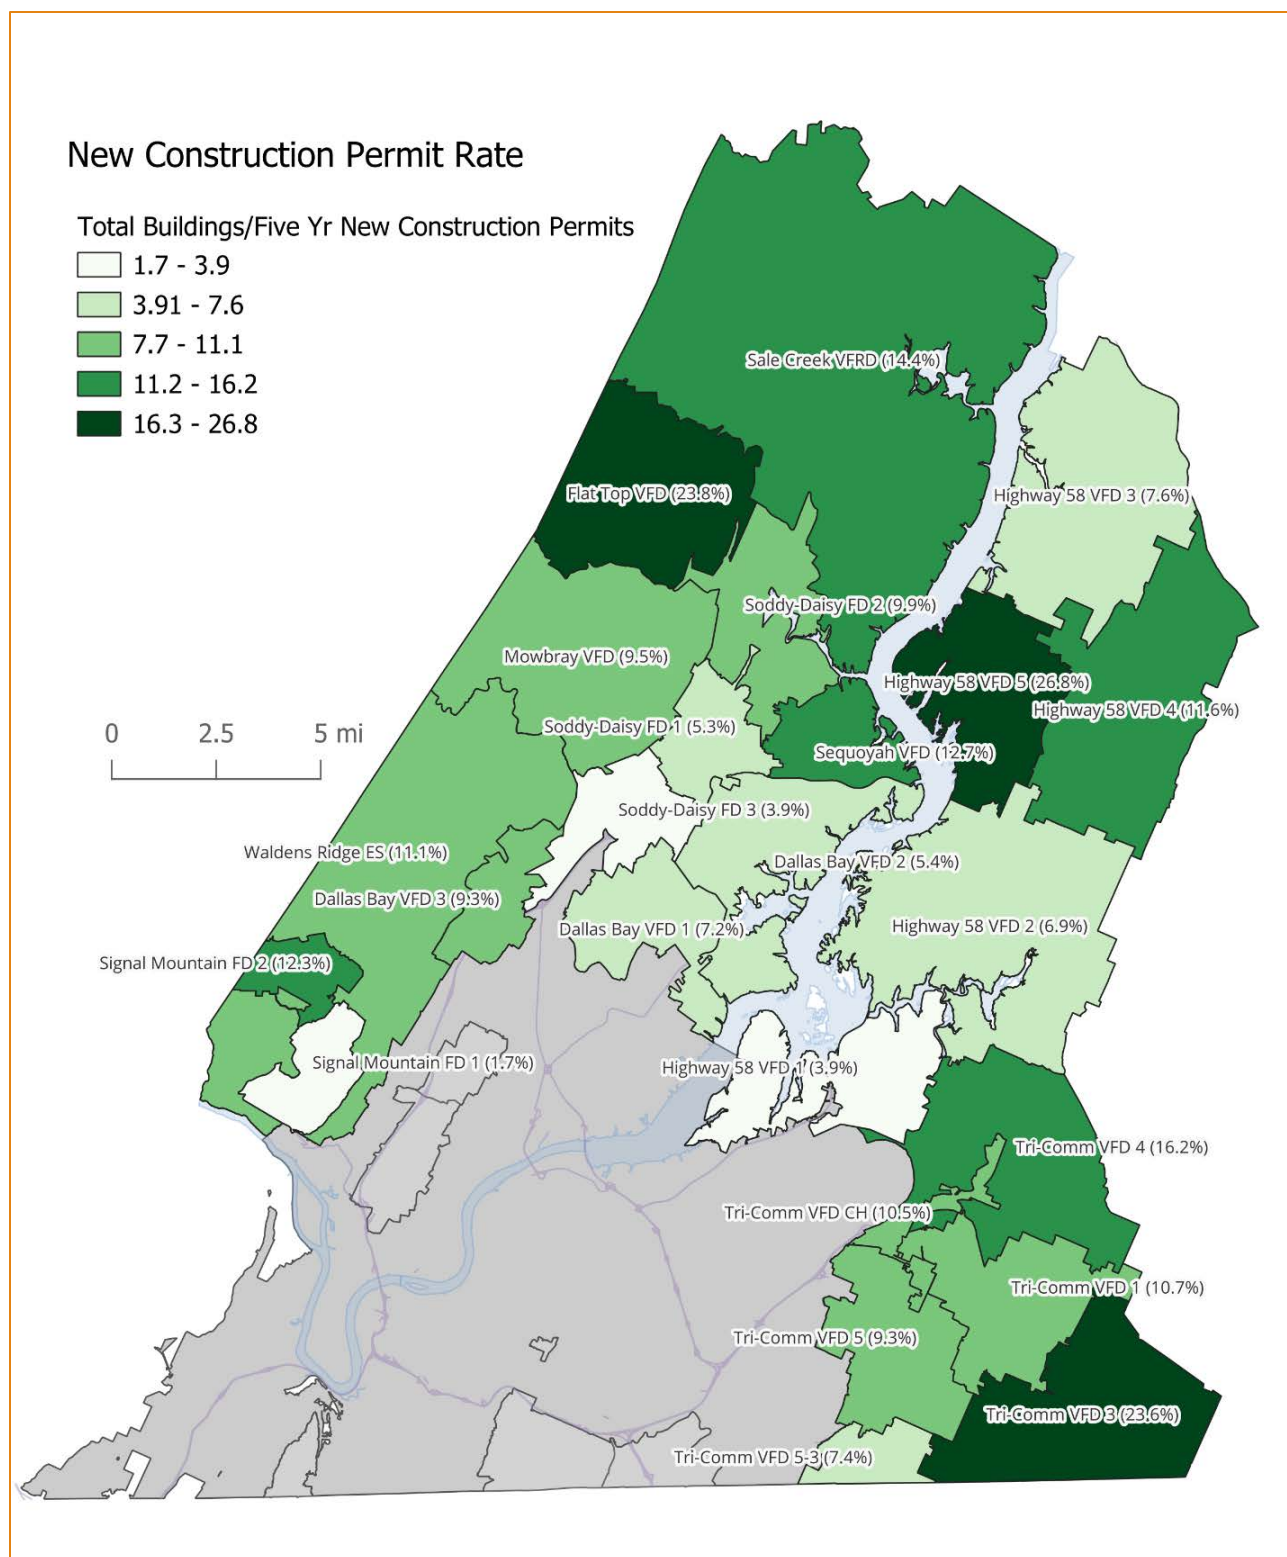

Figure 17. Five-Year Building Permit as a Percentage of Total Buildings

Building Materials and Heating Types

Fire safety within structures is improved by community education about best practices, as part of the mission of the Hamilton County Fire Marshal's Office. As well, Building Official and Fire Marshal enforced compliance with building codes and regulations pertaining to fire safety is essential during the design, construction, and operation of buildings. Especially for commercial and industrial facilities, these include fire suppression systems, smoke detection and alarm system, emergency lighting, evacuation routes, fire doors and compartmentation, firefighter access, and maintenance and inspections. Residential housing is subject to the requirements of the 2018 International Residential Code. The fire safety of individual structures is not inventoried as a property assessment attribute. However, description of some general characteristics of building structures within a response area can assist in fire department planning.

While older buildings may be "built to last," they present more hazards and challenges to firefighters and are less likely to have fire suppression systems. The median age of buildings by response area is shown in Figure 18. Also significant in fire response planning are building size and height. Figure 19 shows the median square footage of study area buildings. The average building height by response areas is shown in Figure 20.

While property assessment data does not contain sufficient information for a complete assessment of a structure's fire resistance, some general components of fire risk can be derived. The primary wall type, structure size, story height, heating type, and use class of buildings were derived from property assessor parcel data and evaluated within response areas using the location of the parcel centroid.

Primary wall material is a factor in fire resistance, although only a small percentage of residential fires involve ignition from exterior cladding or materials. Building construction materials can vary in flammability and structural stability. Wood frame structures with plywood or other structural sheathing is an acceptable fire resistive structure depending on the retardant quality of the sheathing but ranks lower in fire resistance than other building primary wall types. These structures comprise approximately one-third of the total buildings in the study area. Vinyl is the second most prevalent primary wall material for buildings in the study area (31%). It may melt quickly if exposed to high heat and is not recommended for installation on homes by the Federal Emergency Management Agency in areas at high risk for fire, such as forested areas vulnerable to wildfire. More resistant materials in study area structures include metal sheeting, aluminum, brick, stone, stucco, fiber cement, and concrete block. See Figure 21 for a percentage of general primary wall types of structures by response area.

Heating systems can be a significant factor in fire risk. Central heating systems can vary in their fire safety characteristics, with modern systems often equipped with smoke detectors, automatic shutoff features and integration with fire suppression systems. In general, these provide a much safer fire safety environment than other systems. Approximately 93 percent of the study area has central heat/air or forced air systems. Approximately 3.5 percent have gravity heating systems, which are not inherently less safe than blower fan equipped systems, but their lower efficiency may contribute to higher use of supplemental heating systems such as fireplaces and portable electric heaters. Approximately 3.3 percent of structures are classed as No HVAC, which may also be an indicator of more reliance of heating sources more likely to contact interior building materials. Building heating types by response area are presented in Figure 22.

The coverage efficiency of current VFD fire stations in the study area is estimated by both driving distance and driving time to potential incident locations. The municipal stations in Soddy-Daisy and Signal Mountain and populations within those cities are excluded from this analysis. The Hamilton County GIS road centerline network provided by HCGIS network and its estimation of five-mile driving distance zones was used in distance zone calculations. In addition, the HERE Technologies network API⁶ was used to confirm distance estimations using the HCGIS road network and for driving time estimates. HERE mapping

⁶<https://www.here.com/docs/bundle/isoline-routing-api-developer-guide-v8/page/README.html>

2024 Hamilton County Fire Protection Study

data is the primary provider for network analysis in ESRI products and a leading provider of applications for transportation and logistics operations and planning.

Distances were estimated at 1.5, 2.5, and 5 miles along the road network within and adjoining the study area. These distances are used by the Insurance Services Office (ISO) as part of their fire suppression ratings for communities and serve as a standard measure for planning fire department location. Polygons with 1,000-foot buffers for these distance zones were used to estimate the number of building footprints and E-911 address locations within these polygons to account for unmapped roads and driveways within the distance zones. These two datasets were used in preference to parcel centroids with building data because of their less accurate location in relation to the road network. Driving distance zones are shown in Figure 23.

Estimated coverage of buildings and addresses by zone is shown in Table 6. Approximately 56 percent of buildings and E-911 addresses are located within 2.5 miles of the study area fire station. Over 96 percent of buildings and E-911 addresses are within five miles of a study area fire station. The location and concentration of incidents beyond five miles are shown in Figure 24. Driving distance zone coverage of E-911 addresses by driving zone is shown in Figure 25.

Table 6. Buildings and E-911 Addresses within Distance Zones of Study Area Fire Stations

	Buildings		E-911 Addresses	
Distance	Number	Cumulative % of Total	Number	Cumulative % of Total
0-1.5	12,483	26.15%	16,527	25.97%
0-2.5	27,127	56.83%	35,924	56.44%
0-5.0	45,863	96.08%	61,317	96.34%
>5	1,870	3.92%	2,330	3.66%
Total	47,733	100%	63,647	100%

In addition to the addresses and buildings referenced above in the existing fire department response areas, there are a few areas in the southwest portion of the county that do not have a fire department assigned for coverage (Appendix 4. Map of Areas without Fire Protection). This area includes a portion of I-24 and encompass 336 addresses and 251 buildings. About half of the buildings and addresses are in the Cummings Highway Area north of Lookout Mountain. The area of Cash Canyon Road and Kelly's Ferry Place has about 50 buildings; there is also a concentration of about 40 buildings in the Wildwood area near I-24 and the Georgia border.

2024 Hamilton County Fire Protection Study

2024 Hamilton County Fire Protection Study

Figure 24. E-911 Incident Location and Density Beyond Five Miles Driving Distance Zone

2024 Hamilton County Fire Protection Study

Figure 25. No. of E-911 Addresses by Driving Distance Zone and Response Area

2024 Hamilton County Fire Protection Study

In addition to distance estimates, drive time zones were developed for non-municipal fire departments in the study area. Driving time zones were estimated for 5-, 7- and 10-minute service areas along the road network within and adjoining the study area. These driving times intervals are used by ISO as part of their response time criteria. Polygons with 1,000-foot buffers for these service areas were used to estimate the number of building footprints and E-911 address locations within these polygons, as with the driving distance zones. Driving time zones are shown in Figure 26. It is important to note that driving time projections do not include turnout time (the time from dispatch to unit enroute). Turnout time varies as it is dependent on station staffing and departmental policies (Figure 36).

Estimated coverage of buildings and addresses by driving time zone is shown in Table 7. Buildings and E-911 Addresses with Time Zones of Study Area. Approximately 58 percent of buildings and E-911 addresses are located within five minutes of non-municipal study area fire stations. About 97 percent of buildings and E-911 addresses are within 10 minutes of a study area fire station. The location and concentration of incidents beyond 10 minutes are shown in Figure 27. Drive time zone coverage of E-911 addresses by response area is shown in Figure 28.

Incident Categories and Location

The Hamilton County 9-1-1 district provides centralized dispatch to all study area fire stations for assigned emergency response. The operations of the district are not in the scope of this report, but it represents a significant emergency response asset for the study area, providing fast and consistent call processing and reporting. Data provided by the district for this study was geocoded and well-formatted and had a high rate of record completion for data relevant to the analysis of this report.

Three years of dispatch data for the period beginning July 1, 2020, to June 30, 2023, were provided by the district for analysis in this study. Excluded from analysis were incidents dispatched to countywide search and rescue, hazardous materials, and other specialized response handling teams. Also excluded were emergency responses for on-water incidents or mutual aid outside the county. Incidents that could be attributed to study area locations totaled 49,808, almost all of which (49,752) could be geocoded to street level locations. Figure 29 shows the location and density of incidents mapped for the study. The rate of incidents per 1,000 population by response area was calculated as the average annual number of incidents for the three-year period divided by the response area 2020 census population estimate described earlier (Figure 30). The highest rate of incidents occurs in the MVA incident dominated corridor of Tri-Community VFD CH. High rates are also seen in the Highway 58 VFD 4 and Highway 58 VFD 58 5 and in the Flat Top VFD and the Mowbray VFD.

Incidents are assigned to one of 123 problem codes, of which 15 codes account for approximately three-fourths of incidents (Table 8). To simplify and focus analysis, each problem code was assigned a general incident category code as shown in “Appendix 2. Incident Categories.”

Table 8. Most Frequently Assigned Incident Codes

Problem	Number of Incidents
SICK-Sick Person	6,860
FALL-Fall Victim	4,222
FASCIT-Fire Assist Citizen	4,206
DIFFBR-Difficulty Breathing	3,766
CHESTPN-Chest Pain	2,322

Figure 30. Annual Incident Rate per 1,000 Population

2024 Hamilton County Fire Protection Study

By a large margin, medical-related responses are the largest number of dispatched incidents (Figure 31) both in total and across response areas (Figure 32). However, the distribution of these category types within a response area may differ significantly (Figure 33). As noted, MVA incidents are a high proportion in the Tri-Community VFD CH response area, accounting for about one-quarter of all dispatched incidents. Signal Mountain FD 2 has the highest proportion of service incidents in relation to other response areas, and a much lower proportion of medical related incidents. Twelve percent of incidents in the Flat Top VFD are related to fire; this proportion ranges from 3 percent (Tri-Community VFD 1) to 10 percent (Highway-58 VFD 3) in other response areas.

Figure 33. Incident Category Percentage by Response Area

Incident Response Times

Fire station response time is a critical metric for planning fire station location, apparatus deployment, and crew staffing. Incident response time analysis is vulnerable to error and misinterpretation due to the impact of recording errors, differing urgency perceptions by responders, missing data on traffic and other external factors, and sensitivity of small datasets to slight number variation. To mitigate the impact of outliers and reduce “signal-to-noise” ratio for response time analysis, this study adopts several common measures to achieve a better understanding of response capabilities⁷. These are:

- Data with negative values or values greater than 24 hours are removed.
- Fixed time stamps for intervals are recorded by E-911 dispatch for certain incidents. These replace the original time stamp if consistent with other intervals for the incident.
- The top and bottom one percent of time intervals by response are eliminated from each query to eliminate outliers. This has a small effect on 90th percentile response times. Samples in queries with less than 10 observations were not included.
- Incidents categorized as Service, Other, or Test are eliminated with the presumption that those incidents categorized as Alarm, Fire, Medical, MVA, Rescue, and Hazard are Urgent Emergency Calls. Only calls with recorded times for time first unit assigned, time first unit enroute, and time arrived are used in the analysis. This eliminates “not completed,” duplicate, or cancelled calls, which may meet other criteria for urgent emergency but for which a complete response time profile cannot be calculated. Total urgent emergency calls for the following analysis are approximately 38 percent of all calls recorded.

As mentioned above, “not completed” and “cancelled” calls are not calculated as part of the response time analysis. It is important for the county to take a deeper analysis into these call types. Many of the incidents are because a department was unable to respond due to lack of available personnel. A total of 376 calls were not answered by the primary response district during the study period. These numbers reflect the lack of availability of personnel at the time that the incident dispatch is received. An additional factor that cannot be calculated from response data, but is a relevant issue is the total amount of time that no one is available to respond within a particular primary response zone.

The response analysis does not capture when an inadequate response occurred (i.e., inappropriate response vehicle, not enough staffing for the type of incident, inferior level of training by personnel for the incident, etc.). These types of events should be tracked locally to assist with planning and overall service delivery improvement measures.

The main factors in call response are call processing time, turnout time, and travel time. Call processing time at the HC 911 district was not analyzed in detail as part of this study. The median time between when call-taking is completed, and the first unit is dispatched is 62 seconds for all incidents analyzed for emergency response time for study area incidents. The median for this interval by response area is shown in Figure 34.

To highlight variations among study area response areas, total response time in this study is evaluated as the interval between the time the call is assigned to the first unit and the time the first unit arrives at the scene of the incident. The total response time combines the *turnout time* – the interval between the time

⁷ See, for example, the practices of the Los Angeles Fire Department. <https://www.lafd.org/how-we-calculate-results>

2024 Hamilton County Fire Protection Study

the call is assigned and the time the first unit is enroute – and the *travel time* – the time that the first unit arrives at the scene.

The distance between a facility and the location of the incident are significant factors in the length of response time, but this is variable by the time of day, traffic conditions, and the topography and condition of the roadway. Turnout time is inherently a challenge for volunteer fire departments whose crew members do not live in the facility and may be limited by other commitments by time of day. Turnout time is a good metric to identify geographic and organizational factors affecting crew assembly time among stations.

Response times are reported as median values – the interval at which 50 percent of dispatched units have arrived on scene – and 90th percentile values. Although there is no universally accepted standard for evaluating response time due to differing definitions of emergency categories, response time endpoints, and community profiles and demographics, many fire departments use the 90th percentile time as a benchmark for comparing performance over time periods and locations. See, for example, response time benchmarking guidance in the National Fire Protection Association (NFPA) 1720, *Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations and Special Operations to the Public by Volunteer Fire Departments*.

Staffed municipal fire departments operating in compact geographic areas with highly connected road networks will have significantly faster response times than volunteer fire stations in sparsely populated rural areas. The location of response time variability across the study area is illustrated in Figure 35. In this analysis, hot spots are those incidents with recorded response times that exceed the average across all incident response times during the study period at statistically significant levels at 90%, 95%, and 99% confidence levels (*Getis-Ord Gi* statistic, Fixed band 500m threshold*). Cold spots indicate significantly faster response times at these confidence levels. As the figure indicates, clusters of cold spots most frequently occur for incidents near station locations, while incidents more distant from station locations are more likely to constitute hot spots (longer response times).

Hot spots response times were calculated individual for Alarm, Fire, Medical, and MVA incident categories and are displayed by location in Figure 39.

Figure 43. Median and 90th Percentile Response Time MVA Incidents

Incident Hour of Day and Day of Week

Time of day can affect all components of response time, including the availability of staff for turnout and traffic conditions at the time of the incident. According to a US Fire Administration study, time of day has the greatest effect on response times, with the slowest responses occurring during the overnight shift (12am - 6am)⁸

For all emergency response time incidents in the study area, the hour beginning at 5:00 pm has the most frequent occurrences, with the fewest occurring beginning at 3:00 am through 5:00 am. (Figure 44). Over half of all incidents occur between 10 am and 6 pm. The distribution of incidents among general shift times for all incidents is similar for that for urgent incidents (Figure 45), with over one-third of calls occurring between noon and 6 pm. Midnight shift calls are approximately 12 percent of the total.

The distribution of incidents by time of day for total incidents across the study area varies significantly (using chi-square goodness of fit, $p < 0.05$: ($\chi^2 = 71.9$; $p < 0.0001$)). Mondays and Fridays are the highest call days, with Sunday as the lowest and Saturday the second lowest. Call volume does not vary significantly by day in sparsely populated response areas. Daily volume differs significantly in eight response areas:

- Signal Mountain FD 1: Lowest volume days are Sunday, followed by Saturday. The highest volume is Thursday ($\chi^2 = 15.5$; $p = 0.016$).
- Signal Mountain FD 2: Lowest volume days are Sunday, followed by Saturday. The highest volume is Friday. ($\chi^2 = 17.9$; $p = 0.006$).
- Soddy-Daisy FD 3: Lowest volume days are Sunday, followed by Saturday. The highest volume is Wednesday, followed by Monday. ($\chi^2 = 14.3$; $p = 0.0008$).
- Tri-Community VFD :1 Lowest volume days are Sunday, followed by Saturday. The highest volume is Thursday ($\chi^2 = 13.1$; $p = 0.0008$).
- Tri-Community VFD 3: Lowest volume days are Saturday, followed by Sunday. The highest volume is Monday ($\chi^2 = 16.34$; $p = 0.042$).
- Tri-Community VFD 4: Lowest volume days are Sunday, followed by Saturday. The highest volume is Monday ($\chi^2 = 16$. $P < 0.0001$).
- Tri-Community VFD CH: Lowest volume days are Sunday, followed by Saturday. The highest volume is Friday ($\chi^2 = 28.4$; $p < 0.0001$).

⁸ This could be attributed to the lower availability and readiness of firefighters during those hours, as well as the layout of some fire stations that have dormitories above the garage. Therefore, time of day is a significant variable that fire departments should consider when planning their staffing, deployment, and station design strategies. (Reglen, D., & Scheller, D. S. (2016). Fire Department Turnout Times: A Contextual Analysis. Journal of Homeland Security and Emergency Management, 13(1). doi:10.1515/jhsem-2015-0015

ISO Ratings

The Insurance Services Office, Inc. (ISO) conducts evaluations throughout the country to determine the Public Protection Classification (PPC) ratings for communities.

According to ISO, a community's PPC depends on:

Emergency communications systems, including facilities for the public to report fires, staffing, training, certification of telecommunicators, and facilities for dispatching fire departments.

The fire department, including equipment, staffing, training, and geographic deployment of fire companies.

The water supply system, including the inspection and flow testing of hydrants and an evaluation of the amount of available water compared with the amount needed to suppress fires.

Community efforts to reduce the risk of fire, including fire prevention codes and enforcement, public fire safety education, and fire investigation programs.

In each of those protection areas, ISO analyzes the relevant data and assigns a Public Protection Classification — a grading from 1 to 10. Class 1 represents superior property fire protection, and Class 10 indicates that the area's fire suppression program does not meet ISO's minimum criteria. Figure 50 indicates the current PPC ratings in Tennessee.

Figure 50. Current Public Protection Classification Ratings in Tennessee

Most U.S. insurers of home and business properties use ISO's PPC data in calculating premiums. In general, the price of insurance in a community with a good PPC is lower than in a community with a poor PPC.

The PPC ratings can be classified as:

Straight rating- All structures within five driving miles of a fire station will receive the PPC rating (example: Class 5)

Split rating- All structures within five driving miles of a fire station and 1,000 feet of a fire hydrant will receive the class rating on the left of the "/" (example: Class 5/5X). All structures within five driving miles of a fire station but are beyond 1,000 feet of a fire hydrant will receive the class rating to the right of the "/" (example: 5/5X) Previously the "_X" denoted was classified a "9".

2024 Hamilton County Fire Protection Study

Any structure located beyond 5 driving miles from a fire station, regardless of the PPC rating, will receive a Class 10 rating. A class 10 rating decreases the availability and increases the cost of insurance.

Table 9 indicates the ISO rating for each fire service district within Hamilton County that responded to the requests from Tri-Star to verify the PPC ratings in their districts.

Table 9. Fire Department ISO Ratings

Agency	Ratings	Year Evaluated
Dallas Bay VFD	2	2013
Highway 58 VFD	4/ 4X	2022
Mowbray VFD	4	2023
Sale Creek Fire and Rescue	4/ 4X	2019
Sequoyah VFD	4/ 4X	2021
Tri Community VFD	3	2016
Waldens Ridge Emergency Service	5	2022

The Fire Suppression Rating Schedule (FSRS) measures the major elements of a community's fire protection system and develops a numerical grading called a Public Protection Classification (PPC®). The actual rating schedule is incredibly detailed with mathematical formulas and specific criteria. Appendix 3 contains an outline from ISO's website of the items considered in the FSRS and the weight of each item used in calculating a PPC rating.

Fire Hydrants and Water Supply

Hamilton County is serviced by a mixture of private and municipal based water utility districts. In addition to Tennessee American Water, which covers Chattanooga and adjacent cities, utilities serving the study area include Eastside Utility District, Hixson Utility District, North West Utility District, Savannah Valley Utility District, and Walden's Ridge Utility District. Soddy-Daisy is served primarily by the North West Utility District, with some portions by the Hixson Utility District. A small section in the southwest portion of the Tri-Community VFD is served by the Catoosa Water District Authority. The Signal Mountain Water Utility covers all the municipal area of the city and approximately 140 addresses south of the city. While the focus of the utility districts is to provide safe potable water for drinking water and residential/commercial usage, an important aspect of the water systems is the ability to support fire suppression activities.

In most cases, structures located beyond 1,000 feet of a usable fire hydrant must rely on water to be shuttled by fire apparatus. This operation is personnel and equipment intensive to maintain adequate water supply for continuous fire department operations.

The Hamilton County Subdivision Regulations cited below address the minimum requirements for water supply and fire hydrants in new development areas.

Hamilton County, Tennessee Subdivision Regulations

Procedures, Design Standards, and Requirements for Subdivision Plats

408 WATER FACILITIES

408.1 Public Water Supply

a) Where a public water main is accessible, the developer shall install, or cause to be installed, adequate water facilities (including fire hydrants) subject to the specifications and approval of the Division of Water Quality Control, Tennessee Department of Public Health, the local water company or utility district, and local fire authority having jurisdiction.

b) Water supply lines are to be located at least ten (10) feet from septic disposal systems and sewer lines.

408.3 Fire Hydrants

The developer shall install fire hydrants on all new streets/roads or private easements of all major subdivisions except:

- 1) those served by individual wells*
- 2) subdivisions that meet the requirements given below based on existing fire hydrants*
- 3) subdivisions that meet the requirements given below based on proposed fire hydrant locations on existing streets.*

b) The location of all fire hydrants shall be approved by the fire authority having jurisdiction, based on the adopted IFC of the district. (Sept 2021)

2024 Hamilton County Fire Protection Study

Hamilton County, through progressive planning regulations and cooperation of most of the private utility districts, does have an extensive network of fire hydrants. All utility districts contacted were cooperative in developing and providing GIS data for the report. Hydrants located within the study area, excluding Soddy-Daisy and Signal Mountain, are shown in Figure 51. This excludes a small area in the southwest portion of the Tri-Community VFD served by the Catoosa Utility District Authority and a section south of Signal Mountain served by the Signal Mountain Water Utility; a small number of homes adjacent to these areas are served by Tennessee American Water. GIS data is not available for these locations but the respective utilities report that hydrants are present.

As mentioned earlier, ISO classifies structures located within 1,000 feet of a fire hydrant with a better Public Protection Classification for communities that have a split rating. This is because fire apparatus can place a supply line of up to 1,000 feet quickly into service to establish a secure water supply from a fire hydrant. The closer that the fire hydrants are installed will improve the time that it takes to establish a water supply operation. In areas beyond 1,000 feet of a hydrant, pumping relay operations are necessary or a water shuttle supply is utilized with water tender apparatus. This creates the need for additional apparatus and staff to establish a water supply for suppression activities.

Approximately 87 percent of E911 addresses within the study area, excluding Soddy-Daisy and Signal Mountain, are within 1,000 feet of a hydrant; approximately 68 percent are within 500 feet. The current coverage of E911 addresses at three distance zones by response area is shown in Figure 52. Figure 53 shows the distribution of addresses beyond 1,000 feet of a hydrant in the study area.

There are areas that have water lines, but do not have fire hydrants placed. This may be because the water line size does not meet the minimum state regulations of 6" water mains and/ or the ability to supply a minimum of 500 gallons per minute (GPM) of water at 20 pounds of residual pressure (PSI) for fire suppression activities. Figure 54 shows the network of 6' or larger water mains by utility district within the study area, excluding Soddy-Daisy and the area managed by the Signal Mountain Water Utility. Also excluded are the areas served by Union-Fork-Bakewell Utility District and the Catoosa Utility District Authority, for which data was not available. It is important to maintain the water supply requirements as the county continues to grow. As water lines are added or replaced, the size of the mains should meet or exceed the minimum standards and hydrants should be placed as appropriate for new construction and existing buildings. The need for water tenders will remain for all the agencies throughout the county.

An additional source of water for properly outfitted equipment are water bodies throughout the study area.⁹ An estimated 62 percent of the addresses beyond 1,000 feet of a hydrant are within 1,000 feet of a water body. Accessibility to the water sources is critical at strategic locations for drafting and water shuttle operations. Figure 55, for example, shows the additional number of addresses that are currently greater than 1,000 feet of a hydrant that would be within 1,000 feet of a water body within the Mowbray VFD district. Drafting from static and flowing water sources not only requires additional fire apparatus and staff, but also requires specialized training of the equipment operators that must be exercised on a regular basis to maintain proficiency and improve skills for water shuttle operations.

⁹ Water body data accessed 2/2/2024 from Hamilton County Government
http://gismaps.hamiltontn.gov:6080/arcgis/rest/services/Base_Map/MapServer/19

Training Facilities

As mentioned previously, the Hamilton County OEM provides a significant amount of training support and instruction to the volunteer departments in the county. The departments have access to the fire training center operated by the City of Chattanooga. This facility is currently undergoing upgrades and the county has provided \$1.5 million toward the construction of a new fire drill tower. The new facilities will be available for all departments in the county to utilize.

While the scope of the study did not include an analysis of each department's training records, it is recommended that a comprehensive review of the training records of each department's personnel be conducted to identify training gaps and assist with developing a plan to improve emergency services delivery across the county.

Operations

Services Provided

Each volunteer fire department provides traditional fire suppression response. Except for Sequoyah VFD and Flat Top VFD, the volunteer fire departments provide medical first responder coverage within their district. Most first responder incidents are staffed at the basic life support level. The fire departments provide rescue services for vehicle extrication. Some of the departments provide additional technical rescue services, such as swiftwater and search and rescue activities.

Apparatus

The scope of this report did not focus on an analysis of the individual apparatus operated by the volunteer departments. However, it is important to plan and prepare for apparatus replacement. This should include a countywide approach to the hazards identified across the county, standardization of equipment, and sharing resources to reduce overall costs. The diverse topographical challenges of the study area create needs that most other counties in the state do not face. Construction in the wildland/ urban interface zones, coupled with delayed response from mutual aid agencies require different resources than more densely populated suburban areas.

Ladder companies can be placed where they are most needed and provide mutual aid to areas that do not routinely need ladder response. The same is true for other types of equipment such as water tenders, wildland/ brush, rescue, and other types of specialized apparatus. The costs of new fire and rescue apparatus is becoming prohibitive to many volunteer fire departments. Ladder/ aerial apparatus is routinely over \$1 million, and the price of a new pumper typically exceeds \$500,000.

The Insurance Service Office and National Fire Protection Association (NFPA) recommendations and standards must be considered regarding the types of apparatus to purchase and when to replace apparatus.

The Insurance Service Office (ISO) issues standards for types and numbers of apparatus based on a community's needs related to fire flow, building construction, and method of operation. Purchasing specific types of apparatus can result in significant enhancements in the fire department section of the ISO survey.

NFPA 1901 Standard for Automotive Fire Apparatus is a national consensus standard issuing recommendations for fire apparatus relating to equipment, pump capacity, safety measures, age, etc. NFPA 1901 states that "to maximize firefighter capabilities and minimize risk of injuries, it is important that fire apparatus be equipped with the latest safety features and operating capabilities". This standard offers that *if apparatus greater than 15 years old have been properly maintained and are in good condition that they should be placed into reserve status and upgraded*. The NFPA 1901 standard references the many safety upgrades, innovations, and changes that have been added to recent editions which are significant regarding firefighter safety. NFPA 1901 recommends that fire departments should consider the value or risk to firefighters of keeping fire apparatus older than 15 years in front-line service. NFPA 1901 also recommends that apparatus older than 25 years be permanently removed from service.

It is recommended that the county and volunteer fire departments develop a fire department vehicle replacement schedule and appropriate funding to ensure reliable fire equipment that meets modern safety requirements and community risks/ service demands.

Staffing Model

Staffing is a key component of an effective response to incidents and requests for service. While the county has approximately 930 fire service personnel, 506 (54.4%) are full- or part-time career personnel. Most paid personnel are employed by the municipal departments. The remaining 437 personnel volunteer their time to the communities that they live and work in. Table 10 provides a breakdown, as reported by each department, of the type and staffing at the time of data collection for this report. While the overall number of volunteer personnel is impressive, it does not provide context to the actual number of available or active personnel on a regular basis. It is recommended that further analysis be conducted to evaluate a realistic picture of active staffing available during various times of the day, week, and seasons.

Table 10. Fire Department Staffing

Department	Type	Full-Time Career	Part-Time Career	Volunteer	Total # of Personnel
Chattanooga FD	Municipal	369	0	0	369
Dallas Bay VFD	Non-Profit Combination	1	0	64	65
East Ridge Fire Rescue	Municipal- Combination	30	0	9	39
Flat Top VFD	Non-Profit Volunteer	0	0	20	20
Highway 58 VFD	Non-Profit Combination	1	0	69	70
Lookout Mtn FD	Municipal-Public Safety	16	0	0	16
Mowbray VFD	Non-Profit Volunteer	1	0	25	12
Red Bank FD	Municipal- Combination	10	26	6	42
Sale Creek VFD	Non-Profit Volunteer	0	0	50	50
Sequoyah VFD	Non-Profit Volunteer	0	0	29	29
Signal Mountain FD	Municipal	26	0	0	26
Soddy Daisy FD	Municipal- Combination	6	15	35	56
Tri Community VFD	Non-Profit Combination	4	2	90	96
Waldens Ridge Emergency Services	Non-Profit Volunteer	0	0	40	40

Table 11 identifies the apparatus type and on duty staffing for each station that provides response coverage in the unincorporated areas of the county. To address the challenges of having personnel available to respond, some of the departments are compensating personnel for response and staffing coverage. Some of the stations have “live-in personnel” to augment staffing. While it is not a guarantee that the live-in personnel will be available when a call is received, it generally provides a higher level of availability of personnel during overnight hours to reduce response times.

2024 Hamilton County Fire Protection Study

2024 Hamilton County Fire Protection Study

Fire Prevention

The Hamilton County Fire Marshal's Office is a division of the Office of Emergency Management and Homeland Security. The mission of the office is to "protect life and property through the development and application of fire protection, engineering, education and enforcement." This mission is achieved through the performance of fire code inspections, review of subdivision and new commercial construction plans, public education events, and responding to complaints or issues. Staffing levels will need to be evaluated as growth continues and additional personnel added to ensure the comprehensive fire prevention activities are conducted in a timely manner.

Rescue

Routine rescue services such as vehicle extrications are provided by the volunteer and municipal fire departments in the county. Due to the flooding threat in Hamilton County, some of the volunteer and municipal fire departments have varying degrees of swiftwater/ floodwater rescue capabilities (proper equipment and available trained personnel). Some of the fire departments provide high angle rescue services. Most of the technical rescue services are provided by the Chattanooga - Hamilton County Rescue Service (CHCRS) and The Hamilton County Special Tactics and Rescue Services, Inc. (STARS).

STARS provide special tactical and technical support to area fire, rescue, and police services throughout Chattanooga, Hamilton County Tennessee, and the surrounding area. The focus of the STARS capabilities is swiftwater rescue and flood response, dive rescue, and ground search operations. The STARS Team is a support group of the Hamilton County Emergency Services.

CHCRS provides technical rescue and disaster relief services. The focus of the CHCRS capabilities is cave and high angle rescue, ground search, and incident rehabilitation services to fire, police, and rescue personnel.

Both agencies are staffed by volunteer personnel and serve citizens across Chattanooga and the Tri-State area. The rescue agencies deploy at the request of law enforcement, fire departments, and emergency management agencies.

2024 Hamilton County Fire Protection Study

NFPA Standards

The National Fire Protection Association (NFPA) is a not-for-profit corporation that develops “voluntary consensus standards” to promote the science and improve the methods of fire protection and safety related goals. These stages of the development process for the standards and codes include:

1. Public input
2. Public comment
3. NFPA Technical Committee meetings
4. Council appeals and issuance of Standard

Each technical committee is comprised of a diverse group of stakeholders from the public and private sector. Within the four distinct stages there are multiple steps for the final standard to be a truly consensus-based document.

NFPA 1710: Standard for the Organization and Deployment of Fire Suppression Operation, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments and NFPA 1720: Standard for the Organization and Deployment of Fire Suppression Operation, Emergency Medical Operations, and Special Operations to the Public by Volunteer Fire Departments contain the minimum requirements relating to the organization and deployment of career and volunteer fire departments. It is important to note that NFPA 1710 and 1720 are not required by law but are considered the standard used to organize and deploy resources by fire departments. It is also important to be realistic about the information below. It takes time to build up resources. Rural departments must be creative while developing short- and long-term plans to address shortfalls from national standards. Positive progress should be embraced with vision and plans always looking toward improvement of departmental capabilities.

The NFPA 1710 response standard addresses staffing by structure type and size:

Table 13. NFPA 1710 Response Criteria

Structure Type	Size	Minimum Staffing/Min. with Aerial Device Deployed
Single Family Dwelling	2,000 ft ²	14/ 15
Open Air Strip Mall	13,000 ft ² to 196,000 ft ²	27/ 28
Garden Style Apartment	1,200 ft ² apartment, 3 stories	27/ 28
High- Rise	> 75 ft from fire dept. access	42/ 43

NFPA 1720 1.1 states that the standard is applicable to volunteer and combination fire departments. NFPA 1720 response standard is categorized by community demographics:

Table 14. NFPA 1720 Response Criteria

Demand Zone	Demographics	Minimum Staff to Respond	Response Time (minutes)	Meets Objective (%)
Urban area	> 1,000 people/mi ²	15	9	90
Suburban area	500-1,000 people/ mi ²	10	10	80
Rural area	< 500 people/mi ²	6	14	80
Remote area	Travel distance \geq 8 miles	4	Dependent on travel distance	90

National Institute of Science and Technology Study

Crew size and staffing are crucial factors in providing a reliable and efficient delivery of emergency services. Fire departments today provide a larger variety of services compared to 30 years ago. In addition to fire suppression, fire prevention, public education, vehicle extrication, technical rescue, EMS response, hazardous materials, natural and human-caused disasters require a wide variety of training and equipment, as well as the personnel needed to respond.

The National Institute of Standards and Technology (NIST) conducted more than 60 fireground field experiments and released a report titled *NIST Report on Residential Field Experiments* in 2010 to determine the effect of crew size on basic residential fireground activities. Some of the highlights from that report include:

The four-person crews completed all tasks on the fireground on average seven minutes faster (30%) than the two-person crews.

The four-person crews put “water on the fire” 16% faster than two-person crews. Three-person crews were 10% faster than the two-person crews.

The four-person crews completed laddering and ventilation activities 30% faster than the two-person crews and 25% faster than the three-person crews.

The four-person crews started and completed primary search and rescue functions 30% faster than the two-person crews.

There is a direct correlation between crew size and the time required to complete critical fireground tasks that impact firefighter and occupant safety.

Funding

Fire protection is funded through a combination of revenue sources dependent on the department's structure and area served. The revenue sources include donations from residents, subscription fees, private service contributions, state and federal grants, municipal contributions, and appropriations from the county. Table 15 displays the funding provided by the county to assist with operating expenses to each volunteer department for fiscal years (FY) 2019 through the FY2024 budget. The annual funding has increased by over 200 percent in the FY2020 budget and has continued to rise with each respective fiscal year. Figure 56 graphically displays the funding for each of the volunteer fire departments.

In addition to the support activities referenced in the County Engagement section of this report and the operating funding mentioned above, the county continues to provide additional funding by way of capital expenditures for facilities. Most recently the Waldens Ridge Emergency Services and Mowbray Volunteer Fire Department have received new facilities funded by the county. A list of each station and ownership is referenced in the Facilities section of this report. The radio system upgrades, and subsequent equipment purchases directly improve the ability for each department to operate at incidents. The current radio technology is often prohibitive to most volunteer fire departments as mobile and portable radios exceed \$8,000 each. The county also provides the expenses for dispatch services for the departments.

Table 15 also shows the funding for the countywide hazardous materials response team and fire training (classes, equipment, and supplies) that directly impacts the volunteer departments. The county and city of Chattanooga have planned a joint project to upgrade the current fire training facility that will improve training for the entire county, including all the municipalities. In addition to the 10 percent increase to the funding allocated, the FY2024 budget contains an additional \$500,000 for capital and operational expenses for the volunteer fire departments.

Table 15. County Fire and Rescue Funding

Expenditures by type	Actual 2019	Actual 2020	Actual 2021	Actual 2022	Budget 2023	Budget 2024
Hamilton County-Fire Training					\$100,000	\$100,000
Hazardous Material Team	\$36,828	\$63,646	\$44,164	\$115,694	\$74,893	\$78,252
Tri-Community Vol. Fire Dept	\$53,862	\$528,986	\$528,986	\$555,435	\$555,435	\$610,979
Dallas Bay Volunteer Fire Dept	\$74,665	\$369,835	\$369,835	\$388,327	\$388,327	\$427,160
Mowbray Volunteer Fire Dept	\$39,476	\$75,811	\$75,843	\$100,839	\$100,804	\$110,884
Chatt-Hamilton County Rescue	\$30,579	\$34,850	\$68,000	\$71,418	\$71,400	\$78,540
Highway 58 Volunteer Fire Dept	\$113,664	\$434,814	\$434,814	\$456,555	\$456,555	\$502,211
Sequoyah Volunteer Fire Dept	\$41,953	\$53,498	\$53,533	\$78,498	\$78,498	\$86,348
Walden's Ridge Emergency Serv	\$56,616	\$125,732	\$125,404	\$131,674	\$131,674	\$144,841
Sale Creek Volunteer Fire Dept	\$70,145	\$188,301	\$188,277	\$197,690	\$197,679	\$217,447
Hamilton County Marine Rescue	\$25,912	\$68,335	\$68,000	\$71,411	\$71,400	-
Hamilton County Stars	\$19,883	\$56,172	\$68,035	\$71,400	\$71,400	\$98,540
Flattop Volunteer Fire Dept	\$24,787	\$49,280	\$49,280	\$74,280	\$74,280	\$81,708
Total Expenditures	\$588,370	\$2,049,260	\$2,074,171	\$2,313,221	\$2,372,345	\$2,536,910

2024 Hamilton County Fire Protection Study

Figure 56. County Budget Contributions to VFD's

The sources of funding of county fire services are limited. Fire protection in counties can be funded based upon the type of fire services structure that the county has allowed to exist or has created. In counties that do not have a countywide fire department created in accordance with Tennessee Code Annotated (T.C.A.) § 5-17-101, the source of county funding is limited to a donation to the independent non-profit fire department as allowed by T.C.A. § 5-9-101(23). Concerns and issues regarding how the funds are spent, management/organizational issues, strategic planning, and interagency cooperation have been raised due the lack of oversight that the county has with the volunteer fire departments since there is basically no oversight exercised from the county with the donation.

According to T.C.A. § 5-17-101(d), counties may fund a countywide fire department by either of the following two methods:

- 1) Fire tax levied on property within one or more fire tax districts according to T.C.A. § 5-17-105, -106, and -107; or
- 2) Appropriations from the general fund consisting of situs-based revenues from the unincorporated areas of the county and/or revenues that have already been shared with municipalities (examples include TVA PILOT funds, alcohol/ beer tax in the unincorporated areas, the county's share of the second half of local option sales tax revenues, etc.).

The countywide fire department may contract with independent and municipal fire departments to provide coverage within the unincorporated portion of the county. Additionally, T.C.A. § 5-17-101(d)(4) allows the local government to receive donations or charitable contributions for fire protection regardless of the mechanism of funding selected.

Fire Tax Districts

A county that chooses to fund fire protection using fire tax districts must create one or more districts which encompass the entire county outside of the municipal limits, pursuant to T.C.A. § 5-17-105. However, cities may elect to be included in the fire tax districts. The fire tax is to be assessed the same as the property tax and collected as an addition to it. Under T.C.A. § 5-17-106(b), the rate set must be sufficient to pay for each district's share of the total county fire department budget. This is a dedicated revenue stream that can only be used for fire protection. A referendum is not allowed by statute to determine the implementation of a fire tax.

Fire Fees

Many counties have been looking for alternative revenue sources for funding fire protection. T.C.A. § 5-16-101(b)(2) to allow counties to set up "Urban Type Public Facilities" to provide fire protection and to be able to charge a fire fee. To do this, T.C.A. § 5-16-102 states that a majority of the county legislative body would need to pass a resolution placing the authority to exercise the power in this chapter with:

1. Some agency of the county already in existence (an example of this would be a countywide fire department created in accordance with T.C.A. § 5-17-101 *et seq.*
2. A public works department to be created; or
3. A board of public utilities established under T.C.A. § 5-16-103.

Having the countywide fire department in existence prior to pursuing this revenue source would be the most practical alternative. The fire fee can be based upon structures rather than the fire tax which is assessed the same as the property tax. As an example, the fee collected could be structured so that all one- and two-family dwellings are charged \$10 per month while commercial property is assessed a \$15 fee. Discounts could be given for structures that have automatic fire protection sprinkler systems installed and maintained according to code. *(The actual amounts would need to be set based on the budget requirements of the department and parcel/ structure data.)*

The challenge with this type of revenue stream is a collection mechanism that would need to be identified. It cannot be added to the property tax and would need to be directly billed or through other billing mechanisms. Shelby County currently attaches it to the monthly utility bill. This is one way that it could be collected. If a county were looking to collect the fee in this manner, a few issues would need to be reviewed:

1. The utility district would have to agree to the collection mechanism. There is no provision that would require the utility district to participate in this program.
2. If a utility customer refused to pay the additional fee, the county would have to initiate collection measures. The utility could not be disconnected for nonpayment of the fire fee.
3. For parcels without utilities, a direct bill would have to be initiated by the county. This cannot be placed on or with the tax bill from the County Trustee's office.
4. In counties where there are multiple utility districts, the likelihood that all districts would cooperate to collect the fee in the same manner is unlikely and would create a challenge for the accounting of the revenue.

Sports Gaming Privilege Tax Revenue

T.C.A. § 4-49-104 (e)(2) provides that local governments must allocate revenue received from the Sports Gaming Privilege Tax to fund emergency services or local infrastructure projects. This is a relatively new revenue stream that is available to offset some of the expenditure for emergency services.

Non-Profit Volunteer Fire Departments

As stated previously, T.C.A. § 5-9-101(23) allows the county to make a monetary donation to any not-for-profit volunteer fire department that has been registered with the Secretary of State as a not-for-profit organization and duly recognized by the State Fire Marshal's Office in accordance with Fire Department Recognition Act in T.C.A. § 68-102-301 *et seq.*

Under T.C.A. § 12-3-1010 a county may purchase fire equipment with general county funds and then transfer that equipment to a privately chartered not-for-profit fire department. However, the county cannot purchase the property with general obligation debt and then transfer it to the fire department. If the property is financed, the county would have to own and operate the equipment in its own fire department. (Attorney General's Opinion 07-87).

Recommendations

As with all planning processes for emergency services, actions need to be taken on a pro-active basis to avoid system failures during times of critical need. The support given to the independent volunteer fire and rescue departments from Hamilton County has been innovative in many ways. It is imperative that the county and emergency services officials prepare for and take appropriate action to ensure that there are adequate services, personnel, training, and equipment in place for the future needs of the citizens and visitors of Hamilton County.

Growth will create stresses on systems that at times are already in a delicate balance of funding, availability of staff, and dynamically changing communities. It is important that a “systems thinking” approach be adopted to look at the fire and rescue needs as a whole and not just through the lenses of the individual departments. This will likely create changes to the organizational structure of emergency services in the county. Below are recommendations that should be considered when evaluating the vision for fire and rescue capabilities in the county.

Facilities/ Response Coverage

The existing location of the fire stations serving the unincorporated portion of Hamilton County provides adequate coverage except in some critical areas such as the Hunter Road area of Highway 58 district and the southwest portion of the county as indicated in Appendix 4. Less than 4 percent of the structures in the study area of the existing fire response zones are located more than five driving miles from a station. While this is well above the average coverage areas of most counties in Tennessee, there are a few recommendations to consider for future planning.

An option to consider for improving current coverage is to evaluate the feasibility of direct automatic aid from existing departments, such as municipal departments in the county. One example is the area to the south and west of the Signal Mountain Fire Department zone could be covered from their existing stations to a maximum of five driving miles and not affect their current ISO ratings. This would improve the response time and reliability of coverage to the structures located in that area.

With the projected population growth in the Tri-Community VFD (33.1%), Sale Creek VFRD (26.4%), and Highway 58 VFD (20.1%) over the next 25 years, the number of structures that are located beyond the five driving mile zones will increase. This will need to be addressed with additional stations in those areas.

Any new or replacement fire station designed should be constructed in a manner that is consistent with a “hardened critical infrastructure” facility given the county’s vulnerability to natural hazards. This would include, but not limited to, electrical back-up generators, increased wind and earthquake resistance, redundant systems of communications and internet connectivity. Additional features such as access control and physical hardening should be incorporated into the design.

Facilities should be designed with a lifespan of at least 50 years and can be utilized as public safety facilities that would accommodate emergency medical response vehicles and staff, along with law enforcement, emergency management, and/ or rescue equipment and personnel over the life of the facility.

The design specifications for the most recently constructed fire stations for Sale Creek VFD and Waldens Ridge Emergency Services are not needed in all satellite areas. In most facilities, apparatus bay space should be planned for a rescue engine/ pumper, water tender, and ambulance (for the ability to co-locate with emergency medical services). Depending upon risk and response areas, an additional bay should be

2024 Hamilton County Fire Protection Study

constructed for specialized apparatus, such as ladder trucks, heavy rescue, wildland/ brush truck, and/ or a service vehicle.

As noted in Table 1, fire stations that are not capable of providing 24-hour staffing, should be considered for renovation or replacement. Many of the facilities labeled “Facility Capable of 24-hour Coverage” will need renovation for consistent 24-hour usage. It is not recommended to replace Sale Creek VFRD Station 2 due to its proximity to Sale Creek VFRD Station 1 and the overlapping coverage areas with other facilities.

Apparatus and Equipment

As noted previously, this study was not focused on the individual apparatus operated by each existing volunteer fire department. A search of open media sources did identify overlaps of apparatus due to each department’s focus on its response area. It is important to plan and prepare for apparatus replacement. This should include a countywide approach to the hazards identified across the county with standardization of apparatus and equipment (self-contained breathing apparatus, turn-out gear, etc.) to reduce overall costs.

It is recommended that the county and volunteer fire departments develop a fire department vehicle replacement schedule and appropriate funding to ensure reliable fire equipment that meets modern safety requirements and community risks/ service demands.

Organizational

The organization model of the fire service in Hamilton will dictate the options available for improved service delivery and funding. Many areas that could be evaluated further, such as response staffing (number of personnel arriving per apparatus), training levels, and other administrative reporting criteria will require a common records management system that all departments/ stations utilize. It is recommended that all departments and the county OEM migrate to a single platform system for current and future advanced analytics capability.

While the county does provide support services (training, fire prevention, and other services) to the volunteer fire departments as noted in this report, the fire and rescue departments are governed independently by individual boards of directors. The independent fire and rescue department model is common in most areas across the state. The increase of population and construction, changes of community demographics, availability of personnel, challenges with recruitment and retention of volunteers from a defined geographic area, and limited voluntary fund-raising activities are causing many counties to re-evaluate the current provisions of emergency services.

The main options are:

1. Independent Fire and Rescue Departments- This would be maintaining the status quo in operation today or a consolidation of two or more volunteer organizations that remain independent from the county.
2. Countywide Fire Department (hybrid)- A countywide fire department created by resolution of the Hamilton County legislative body with contractual agreements in place with the existing volunteer departments and/ or municipal fire service agencies to provide coverage of the entire unincorporated portion of the county. The hybrid countywide fire department can be a transition model from the existing independent agencies to a single agency or system with multiple stations. A hybrid countywide department typically consists of a combination of county owned and operated

2024 Hamilton County Fire Protection Study

facilities and contracted response areas to provide services in the unincorporated portion of the county.

3. Countywide Fire Department-Single County operated fire department, outside the municipalities, with multiple stations.
4. Urban Type Public Facilities- Like countywide fire department with different funding options. (See funding section).

Options two and three follow T.C.A. § 5-17-101 *et seq* and option four follows T.C.A. § 5-16-101(b)(2) *et seq*.

Personnel

Fire department staffing is the most critical function within the fire protection delivery system. Traditionally, in Hamilton County and across the nation in rural communities, volunteers have provided most of the firefighting and rescue staffing capabilities. In recent years, the ability to recruit and retain volunteers, along with a consistently available pool of volunteers is becoming much more difficult to maintain. To counter the decreasing number of available volunteer personnel, communities are looking to augment staffing with paid personnel.

Paid staffing can consist of part-time and/ or full-time personnel. Most communities looking to add paid personnel will develop a transition plan, generally starting with career personnel operating during the most critical times of reduced availability of volunteer staff. Shifts are often scheduled for 8, 10, or 12 hours, with the goal of eventually providing 24-hour coverage.

It is recommended that Hamilton County develop short- and long-term plans for paid staffing to augment the volunteer personnel available in the county. The most immediate need would be to ensure adequate daytime coverage during the times of highest incident volume and lowest availability of volunteer personnel (daytime hours during the week). This will provide for a more consistent response to incidents, reduce response times, and ensure a minimum number of personnel are available during critical times when volunteers may not be available.

We recommend that the career firefighting personnel obtain the following minimum certifications through the Tennessee Firefighting Commission for the level to which they are hired:

- Firefighter- Firefighter I and II
- Driver/ Engineer- Driver/ Apparatus Operator
- Shift Commander- Fire Officer I and II, Fire Instructor I and II

In addition, all personnel should obtain the appropriate National Incident Management System- Incident Command (ICS) training, basic/ advanced vehicle rescue training, hazardous materials operations, and at a minimum Emergency Medical Technician- Basic or Advanced (preferred) licensure. As these positions would be newly created, some of the personnel may not have all the required training and certifications. A reasonable period should be set for obtaining the appropriate training and certifications.

The hiring of the career personnel would necessitate the county enacting a resolution creating the Hamilton County Fire Department. The structure of which could be a single countywide agency, outside the municipalities or may be a hybrid model of a contractual agreement in place with the existing volunteer departments with or without county operated first due station(s). The contractual agreement or a separate Memorandum of Understanding (MOU) would need to be created to provide liability

2024 Hamilton County Fire Protection Study

protection for the county's employees operating apparatus/ equipment owned by the volunteer departments.

It is important to note that the Fair Labor Standards Act (FLSA) does not allow paid personnel (full or part-time) to volunteer for the same agency that they are employed. A contractual relationship between the county and an existing non-profit volunteer department would constitute the same agency relationship.

Water Supply

Water supply is a critical factor in the community's fire protection system. As mentioned in the ISO section, it is 40 percent of the total Fire Protection Rating Schedule. The county must take a comprehensive approach to providing adequate water supplies for fire protection. The water supply strategy needs to include:

- Continued enforcement of subdivision regulations and fire prevention code requirements for needed fire flow availability in new construction projects.
- Properly sized water mains and fire hydrant distribution. This includes planning regulations, codes enforcement, and support from the independent water purveyors operating in the county.
- Retroactive fire hydrant installation in key areas to reduce distances for water tender shuttle operations (minimum size of 6" water main is required).
- Cooperation between the private utility districts and fire departments to ensure that all the fire hydrants are flow tested on a regular basis and that any hydrants needing repaired or replaced are serviced in a timely manner.
- Maintaining or increasing the number of firefighting water tenders distributed throughout the county.
- Identification of natural and manufactured water drafting locations to reduce water shuttle distances.
- Placement of dry hydrants where appropriate to increase access to water supplies.
- Require pump test of apparatus to be completed on an annual basis and submit documentation of testing and applicable personnel's apparatus driving/ operations training to OEM.

Funding

The county currently contributes around \$3 million per year to the volunteer fire and rescue departments. This is a significant investment, with little operational control of the services provided. As the county continues to grow, equipment and infrastructure needs to be replaced or added, and personnel will need to be hired. The funding model will need to be re-evaluated to remain viable and accountability measures (reporting requirements, minimum training standards, standardization, etc.) put in place as a contingency of receiving funding. The funding section of this report identifies the options that are currently in place as provided by state statute.

Summary

Tri-Star was requested to conduct an evaluation of the fire and rescue infrastructure of Hamilton County. The scope of the study was an evaluation of the demographic and response characteristics of fire departments operating in the unincorporated areas of Hamilton County, Tennessee, including:

- Current levels of fire protection service and identification of future needs based on planning projections.
- Geographic coverage and performance of individual fire station locations in terms of response time (turnout and travel time to scene).
- Statistically significant areas of response time differences.
- Areas of greatest density of demand and coverage gaps.
- Current staffing levels and alternative staffing models to address projected demographic changes and growth projections.
- Multi-year incident data and classification by incident type and characteristics of response time by time of day and day of week.
- Geographic areas of growth trends by station based on building permit location and other development activity.

The volunteer fire service in Hamilton County has provided a solid history of quality service and dedication to the community over the years. The county provides a significant amount of financial support and other services to the independent fire and rescue departments. Hamilton County, like most communities across the state and nation, is experiencing a decline in available volunteers to provide the needed fire and rescue services 24 hours a day, seven days a week.

Eight volunteer fire departments in the county serve the entire unincorporated population of Hamilton County (111,734 in the 2020 Census) as well as the cities and towns of Collegedale, Lakesite, and Walden. In total, the area served is slightly over one-third of the Hamilton County population tabulated in the 2020 census. The highest concentration of population is near Chattanooga on the western border of Tri-Community VFD 5, in the Highway 58 VFD 1 zone, and Dallas Bay VFD 1.

The Tri-Community VFD has the largest portion of population (39%) and E-911 addresses (34%) in the VFD coverage area, followed by the Highway 58 VFD, and the Dallas Bay VFD (Table 16). The Tri-Community VFD is estimated to have the highest population growth by 2050 (33%) followed by the Sale Creek VFRD (26%). The Dallas Bay VFD and the Highway 58 VFD are both estimated to grow about 20 percent, while the lower population districts Flat Top VFD, Mowbray VFD, and Waldens Ridge ES are not projected to have high population growth relevant to their current levels.

2024 Hamilton County Fire Protection Study

Table 16. Summary of Population and Area by VFD

	Percent of Total VFD Area						
	Pop. (2020)	Sq Mi	Pop. per Sq Mile	Pop (2020)	Square Miles	County VFD Budget (2024)	E-911 Addresses
Dallas Bay VFD	24,792	28.1	883	19.9%	7.5%	19.6%	20.9%
Flat Top VFD	561	17.3	32	0.5%	4.6%	3.7%	0.6%
Highway 58 VFD	31,832	100.7	316	25.6%	26.9%	23.0%	27.5%
Mowbray VFD	1,705	22.0	77	1.4%	5.9%	5.1%	1.7%
Sale Creek VFRD	7,997	82.7	97	6.4%	22.1%	10.0%	7.6%
Sequoyah VFD	2,375	23.5	101	1.9%	6.3%	4.0%	2.2%
Tri-Community VFD	48,732	65.3	746	39.1%	17.4%	28.0%	33.9%
Waldens Ridge ES	6,528	35.0	186	5.2%	9.3%	6.6%	5.6%
Total VFD	124,522	374.6	332	100%	100%	100%	100%

An analysis of building permit activity (Table 17) shows that the Tri-Community VFD accounts for the highest percentage of all building permits issued in the last five years (44%), followed by the Highway 58 VFD (20%) and the Dallas Bay VFD (16%). The highest percentage of residential building permits within each VFD is the Sequoyah VFD (96%) and the lowest in the Dallas Bay VFD and the Mowbray VFD districts (87%). When the number of new construction permits is rated against the number of existing buildings, the Flat Top VFD has the highest rate of new construction (24%), followed by Sale Creek VFRD (14%) and the Tri-Community VFD (13%).

Table 17. Building Permit Activity by VFD

	Total No.	% of VFD Area	% Residential within VFD	Number by Category				New Construction Rate
				AAR	Demo	New	Other	
Dallas Bay VFD	1,435	15.6%	87.2%	667	38	661	69	6.5%
Flat Top VFD	92	1.0%	92.4%	26		65	1	23.8%
Highway 58 VFD	1,856	20.1%	90.6%	693	32	1,047	84	7.6%
Mowbray VFD	143	1.6%	87.4%	58	8	69	8	9.5%
Sale Creek VFRD	798	8.7%	92.6%	242	17	522	17	14.4%
Sequoyah VFD	188	2.0%	95.7%	57	4	126	1	2.4%
Tri-Community VFD	4,083	44.3%	87.6%	1520	140	2,294	129	12.9%
Waldens Ridge ES	623	6.8%	90.4%	269	13	313	28	11.1%

Individual building characteristics are a factor in fire risk planning. Table 18 identifies the number of buildings, median year built, median square feet, wall material percentage and land use class by fire department area.

2024 Hamilton County Fire Protection Study

Table 18. Summary of Building Characteristics by VFD

	No. Bldgs	Median Year Built	Median Sq ft	Wall Material % Total in Dept			Land Use Class % Total in Dept		
				Vinyl	Wood Frame	Brick	Comm	Residential	Multi Family
Dallas Bay VFD	10,198	1984	1,866	35.2%	41.3%	12.1%	2.5%	94.9%	1.5%

Sequoyah VFD	989	1996	1,782	46.9%	28.3%	9.4%	0.6%	97.1%	0.2%
Tri-Community VFD	17,760	1994	2,261	24.9%	31.9%	19.8%	2.9%	91.8%	1.8%
Waldens Ridge ES	2,819	1987	2,552	14.1%	47.0%	13.4%	3.1%	91.1%	1.6%

While the median square feet of the buildings are important planning factors, there is a trend to build larger and closer homes in certain areas. This requires continuous evaluation by the fire department administration to ensure proper response and apparatus assignment plans are developed prior to an incident occurring.

The VFDs in Hamilton County benefit significantly from the dispatch services and reporting system of a single unified 9-1-1. Table 19 summarizes the number and type of incidents within each fire departments zone. Medically related incidents were more prevalent than any other category, accounting for nearly 70 percent of all recorded, followed by service calls (10%), alarms (8%) and fires (6%). Based on an annual average number of incidents using the last three years of incident data, the incident rate per 1,000 residents is highest in the Sale Creek VFRD (127) and the Mowbray VFD (122) compared to a rate of 104 for residents across all VFDs. The incident rate per 1,000 is the lowest in the Walden Ridge ES (81).

Table 19. E-911 Incident Categories by VFD

	Alarm	Fire	Hazard	Medic	MVA	Rescue	Service	Total for VFD	% of All VFD	Rate/1,000 Pop
Dallas Bay VFD	430	415	246	4,936	253	30	862	7,172	18.5%	96
Flat Top VFD	14	25	5	113	34	2	8	201	0.5%	119
Highway 58 VFD	734	520	238	6,485	354	50	845	9,226	23.8%	97
Mowbray VFD	19	54	37	422	24	15	52	623	1.6%	122
Sale Creek VFRD	180	244	100	2,048	91	15	367	3,045	7.8%	127
Sequoyah VFD	42	42	31	450	16	2	84	667	1.7%	94
Tri-Community VFD	1,476	771	426	11,224	901	95	1,378	16,271	41.9%	111

2024 Hamilton County Fire Protection Study

With only a few exceptions, the placement of stations for VFD service area coverage is particularly good for a suburban and rural region. Approximately 96 percent of E-911 addresses are within five miles of a fire station and 97 percent of these addresses within 10 minutes driving time from a fire station. (This does not include the areas highlighted in Appendix 4 without fire response coverage assigned.) Driving time and distance is most favorable for the denser population and higher road connectivity of response areas adjoining Chattanooga. Almost 79 percent of addresses are within 5 minutes of fire stations in the Dallas Bay VFD, while only 31 percent are within five minutes of the Flat Top VFD fire station. The Flat Top VFD, Mowbray VFD and the Waldens Ridge VFD have larger percentages of addresses beyond a 10- minute driving time. The densest cluster of addresses and buildings beyond five miles driving distance and 10 minutes driving time are in the eastern section of the Highway 58 VFD 1 response area. More dispersed but similar total numbers of addresses beyond 10 minutes are in the Highway 58 VFD 3 area, the Sale Creek VFRD, and the Waldens Ridge ES.

As indicated in the “Facilities/ Response Coverage” section of the Recommendations, a fire station is needed in the Hunter Road area of Highway 58’s district. Automatic aid agreements should be considered with the municipalities to improve overall coverage of structures that are outside the five mile driving distances of the volunteer departments.

Table 20. Driving Distance and Driving Time from Fire Stations by VFD

	Driving Distance (Miles)				Modeled Driving Time (Minutes)			
	<=1.5	>1.5 - 2.5	>2.5 - 5.0	>5	0 - 5	5 - 7	7 - 10	>10
Dallas Bay VFD	37.8%	40.2%	21.6%	0.5%	78.6%	11.8%	7.2%	2.4%
Flat Top VFD	23.2%	9.6%	34.8%	32.3%	30.6%	17.5%	26.9%	24.9%
Highway 58 VFD	14.3%	26.0%	50.7%	9.1%	48.1%	23.9%	24.8%	3.3%
Mowbray VFD	25.4%	31.9%	40.5%	2.2%	39.2%	23.0%	21.2%	16.6%
Sale Creek VFRD	24.7%	10.4%	59.9%	5.0%	43.4%	21.0%	31.8%	3.9%
Sequoyah VFD	35.3%	50.7%	14.0%	0.0%	74.3%	16.2%	8.8%	0.7%
Tri-Community VFD	27.4%	33.0%	39.5%	0.1%	56.1%	27.6%	15.5%	0.9%
Waldens Ridge ES	30.3%	25.2%	37.4%	7.1%	61.7%	8.5%	21.6%	8.2%

While travel time is a key component in response time, call processing and turnout times are also significant factors. The median call processing time for incidents dispatched to VFDs is 62 seconds. Turnout times to assemble crews and apparatus are lowest for incidents in the Dallas Bay VFD, with 90 percent of incidents recorded as enroute within 3.4 minutes. Tri-Community VFD 90th percentile times range from 4.6 to 5.2 minutes for all stations in that VFD. The Sequoyah VFD and the Mowbray VFD report 90 percent of calls are enroute within about 6 minutes of dispatch. Waldens Ridge ES, Flat Top VFD, and Highway 58 VFD record longer times. In comparison to some of the municipalities, Signal Mountain FD’s median turn-out time is 1 minute, and Soddy-Daisy FD’s is 1.4 minutes.

The incident time of day is one of the most significant factors in response time. Slightly over one-third of calls in the VFD service area are received between noon and 6 pm, with about a quarter occurring in both the 6 am to noon and the 6pm to midnight time periods. Approximately 12 percent of calls occur between midnight and 6 am, the period in which the median response time is longest in all VFDs.

2024 Hamilton County Fire Protection Study

The combined turnout and travel times by VFD are summarized in Table 21. The 90th percentile response time in minutes from the time an incident is first assigned to the time of first unit arrival for urgent emergency calls ranges from 23.5 minutes in the Waldens Ridge ES and 20.3 minutes in the Flat Top VFD to 13.4 minutes in the Dallas Bay VFD and 13.8 minutes in the Mowbray VFD. For medically related incidents, 90th percentile response times range from 19.7 minutes in the Waldens Ridge ES and 18.2 minutes in the Flat Top VFD to 13.3 minutes in the Dallas Bay VFD and 13.6 minutes in the Tri-Community VFD. The 90th percentile response time for fire related incidents is fastest in the Tri-Community VFD (13.4) and the Dallas Bay VFD (14.8). The 90th percentile response time to fires in other VFDs is about 19 minutes, with Waldens Ridge ES slower at 24.8 minutes. It should be noted that smaller VFDs have lower numbers of incidents and their calculated times are more subject to outlier values.

The median response time for fire incidents by Chattanooga FD is 5.2 minutes and the 90th percentile response time to is 8.6 minutes. The median response time to fire incidents in the county ranges from 8.1 minutes in Tri-Community VFD to 15.1 minutes in Waldens Ridge ES response zone (Table 21). Figure 38 provides a deeper analysis by station to Signal Mountain, Soddy-Daisy, and each of the volunteer departments' response zones.

Table 21. Median and 90th Percentile Response Times in Minutes by VFD

	All Incidents		Alarm		Fire		Medical		MVA	
	Median	90th	Median	90th	Median	90th	Median	90th	Median	90th
Dallas Bay VFD	7.9	13.4	7.8	14.6	8.7	14.8	8.0	13.3	5.5	9.9
Flat Top VFD	13.3	20.3	*	*	10.8	19.8	12.4	18.2	13.5	17.3
Highway 58 VFD	10.3	17.9	13.0	22.4	10.8	19.4	10.2	17.1	8.1	13.2
Mowbray VFD	7.9	13.8	*	*	9.6	19.9	7.7	12.7	7.2	8.7
Sale Creek VFRD	11.0	18.4	12.4	23.7	10.4	19.0	11.5	18.0	7.2	11.6
Sequoyah VFD	11.5	18.7	14.8	24.9	10.9	19.6	11.5	17.4	6.7	8.6
Tri-Community VFD	8.1	13.8	8.7	15.3	8.1	13.4	8.0	13.6	6.6	11.0
Waldens Ridge ES	12.2	23.5	13.5	24.6	15.1	24.8	11.7	19.7	11.3	19.3

*Insufficient data

The Recommendations section of this report outlines several actions that should be considered as short- and long-term planning and action items. Reliability of service and availability of personnel should be of highest priority when developing the plans. The volunteer departments often have minimal staff available to respond and most fire responses rely on mutual aid from other volunteer and municipal departments, to have an adequate response.

Regardless of the course(s) of action chosen, it is imperative that the fire and rescue departments, along with the county officials actively participate in developing strategic plans to address current gaps and the inevitable challenges that come with population growth and demographic changes that are currently impacting the county and will continue to increase in the coming years.

Appendix 3. ISO Grading Criteria

ISO Survey Criteria	Points
Emergency Communications	
<i>Emergency reporting:</i> ISO will credit basic 9-1-1 or Enhanced 9-1-1. Other items evaluated include E9-1-1 wireless, voice over Internet>Protocol (VoIP), and computer-aided dispatch (CAD).	3
<i>Telecommunicators:</i> ISO credits the performance of the telecommunicators in accordance with the general criteria of NFPA 1221, <u>Standard for the Installation, Maintenance, and Use of Emergency Services Communications Systems</u> . We also credit emergency dispatch protocols and the telecommunicators' training and certification programs.	4
<i>Dispatch circuits:</i> ISO credits the number and type of dispatch circuits in accordance with the general criteria in NFPA 1221.	3
Emergency Communications Total	10
Fire Department	
<i>Engine companies:</i> ISO compares the number of in-service pumpers and the equipment carried with the number of needed pumpers and the equipment identified in the FSRS. The number of needed engines depends on the basic fire flow, the size of the area served, and the method of operation.	6
<i>Reserve pumpers:</i> ISO evaluates the number of reserve pumpers and their pump capacity; other factors include hose and equipment carried.	0.5
<i>Pump capacity:</i> ISO compares the pump capacity of the in-service and reserve pumpers (and pumps on other apparatus) with the basic fire flow. ISO considers a maximum basic fire flow of 3,500 gpm.	3
<i>Ladder/service companies:</i> Communities use ladders, tools, and equipment normally carried on ladder trucks for ladder operations, as well as for forcible entry, utility shut-off, ventilation, salvage, overhaul, and lighting. The number and type of apparatus depend on the height of the buildings, needed fire flow, and size of the area served.	4
<i>Reserve ladder/service trucks:</i> ISO evaluates the number of reserve ladder/service trucks and the equipment they carry.	0.5

2024 Hamilton County Fire Protection Study

Deployment analysis: ISO credits the percentage of the community within specified response distances of pumpers (1.5 miles) and ladder/service apparatus (2.5 miles). As an alternative, a fire protection area may use the results of a systemic performance evaluation. That type of evaluation analyzes CAD history to demonstrate that, with its current deployment of companies, the fire department meets the time constraints for initial arriving engine and initial full-alarm assignment. The timing is in accordance with the general criteria in NFPA 1710, Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations, and Special Operations to the Public by Career Fire Departments.

10

Personnel: ISO credits the personnel available to respond to first alarms for structure fires. For personnel not normally in the fire station (on-call and off-duty members), ISO reduces credit for the responding members to reflect the time needed for notification, travel, and assembly on the fireground. ISO then applies an upper limit for the credit for personnel because it is impractical for a large number of personnel to operate a piece of apparatus.

15

Training: Trained personnel are vital to a competent fire suppression force. ISO evaluates training facilities and their use; company training at fire stations; training and certification of fire officers; driver/operator, hazardous materials, and recruit training; and building familiarization and pre-incident planning inspections.

9

Operational considerations: ISO credits the standard operating procedures for structure firefighting and the establishment of an incident management system.

2

Fire Department Total**50****Water Supply**

Supply system: ISO compares the available water supply at representative community locations with the needed fire flows for those locations. The supply works, water main capacity, or fire hydrant distribution may limit the available supply.

30

Hydrant size, type, and installation: ISO evaluates the design and installation of fire hydrants.

3

Inspection and fire flow testing of hydrants: ISO evaluates the frequency and completeness of fire hydrant inspections and the flow-testing program, which can include the use of calibrated hydraulic molding. ISO also includes credit for hydrant marking.

7

Water Supply Total**40**

Community Risk Reduction

Fire prevention code adoption and enforcement: This section assesses the Fire Prevention Code adoption and enforcement capabilities of a community. Items evaluated include adoption and maintenance of one of the model codes; number and qualifications of fire prevention personnel, including certification and continuing education; and fire prevention programs, such as plan review, certificate of occupancy inspections, quality control, code compliance, inspection of private fire protection equipment, fire prevention ordinances, and coordination with fire department training and pre-incident planning activities.

2.2

Public fire safety education: ISO evaluates the existence of a fire safety education program; the qualifications, training, and certifications of public fire safety educators; and the activities of the various public fire safety education programs, such as residential fire safety programs, fire safety education in schools, juvenile fire-setter education programs, and fire safety education in occupancies with large loss potential or hazardous conditions.

2.2

Fire investigation: This section examines the fire investigation activities of a community and is based on establishing authority to conduct and enforce fire investigations, the number and qualifications of fire investigators, the activities of the fire investigation staff, and the use of the National Fire Incident Reporting System.

1.1

Community Risk Reduction Total

5.5

Survey Total

105.5

Divergence

Divergence: Even the best fire department will be less than fully effective if it has an inadequate water supply. Similarly, even a superior water supply will be less than fully effective if the fire department lacks the equipment, personnel, or operational considerations to use the water. If the relative scores for fire department and water supply are different, ISO adjusts the total score downward to reflect the limiting effect of the less adequate item on the better one.

Appendix 4. Map of Areas without Fire Protection

CROSSROADS

at US Highway 27 / Dayton Pike & Patterson Road

PLACEMAKING

- (A) plan areas for outdoor seating, plazas, merchandise display and parks

NEIGHBORHOOD DESIGN

- (B) potential small lot, single family in-fill

PEDESTRIAN IMPROVEMENTS

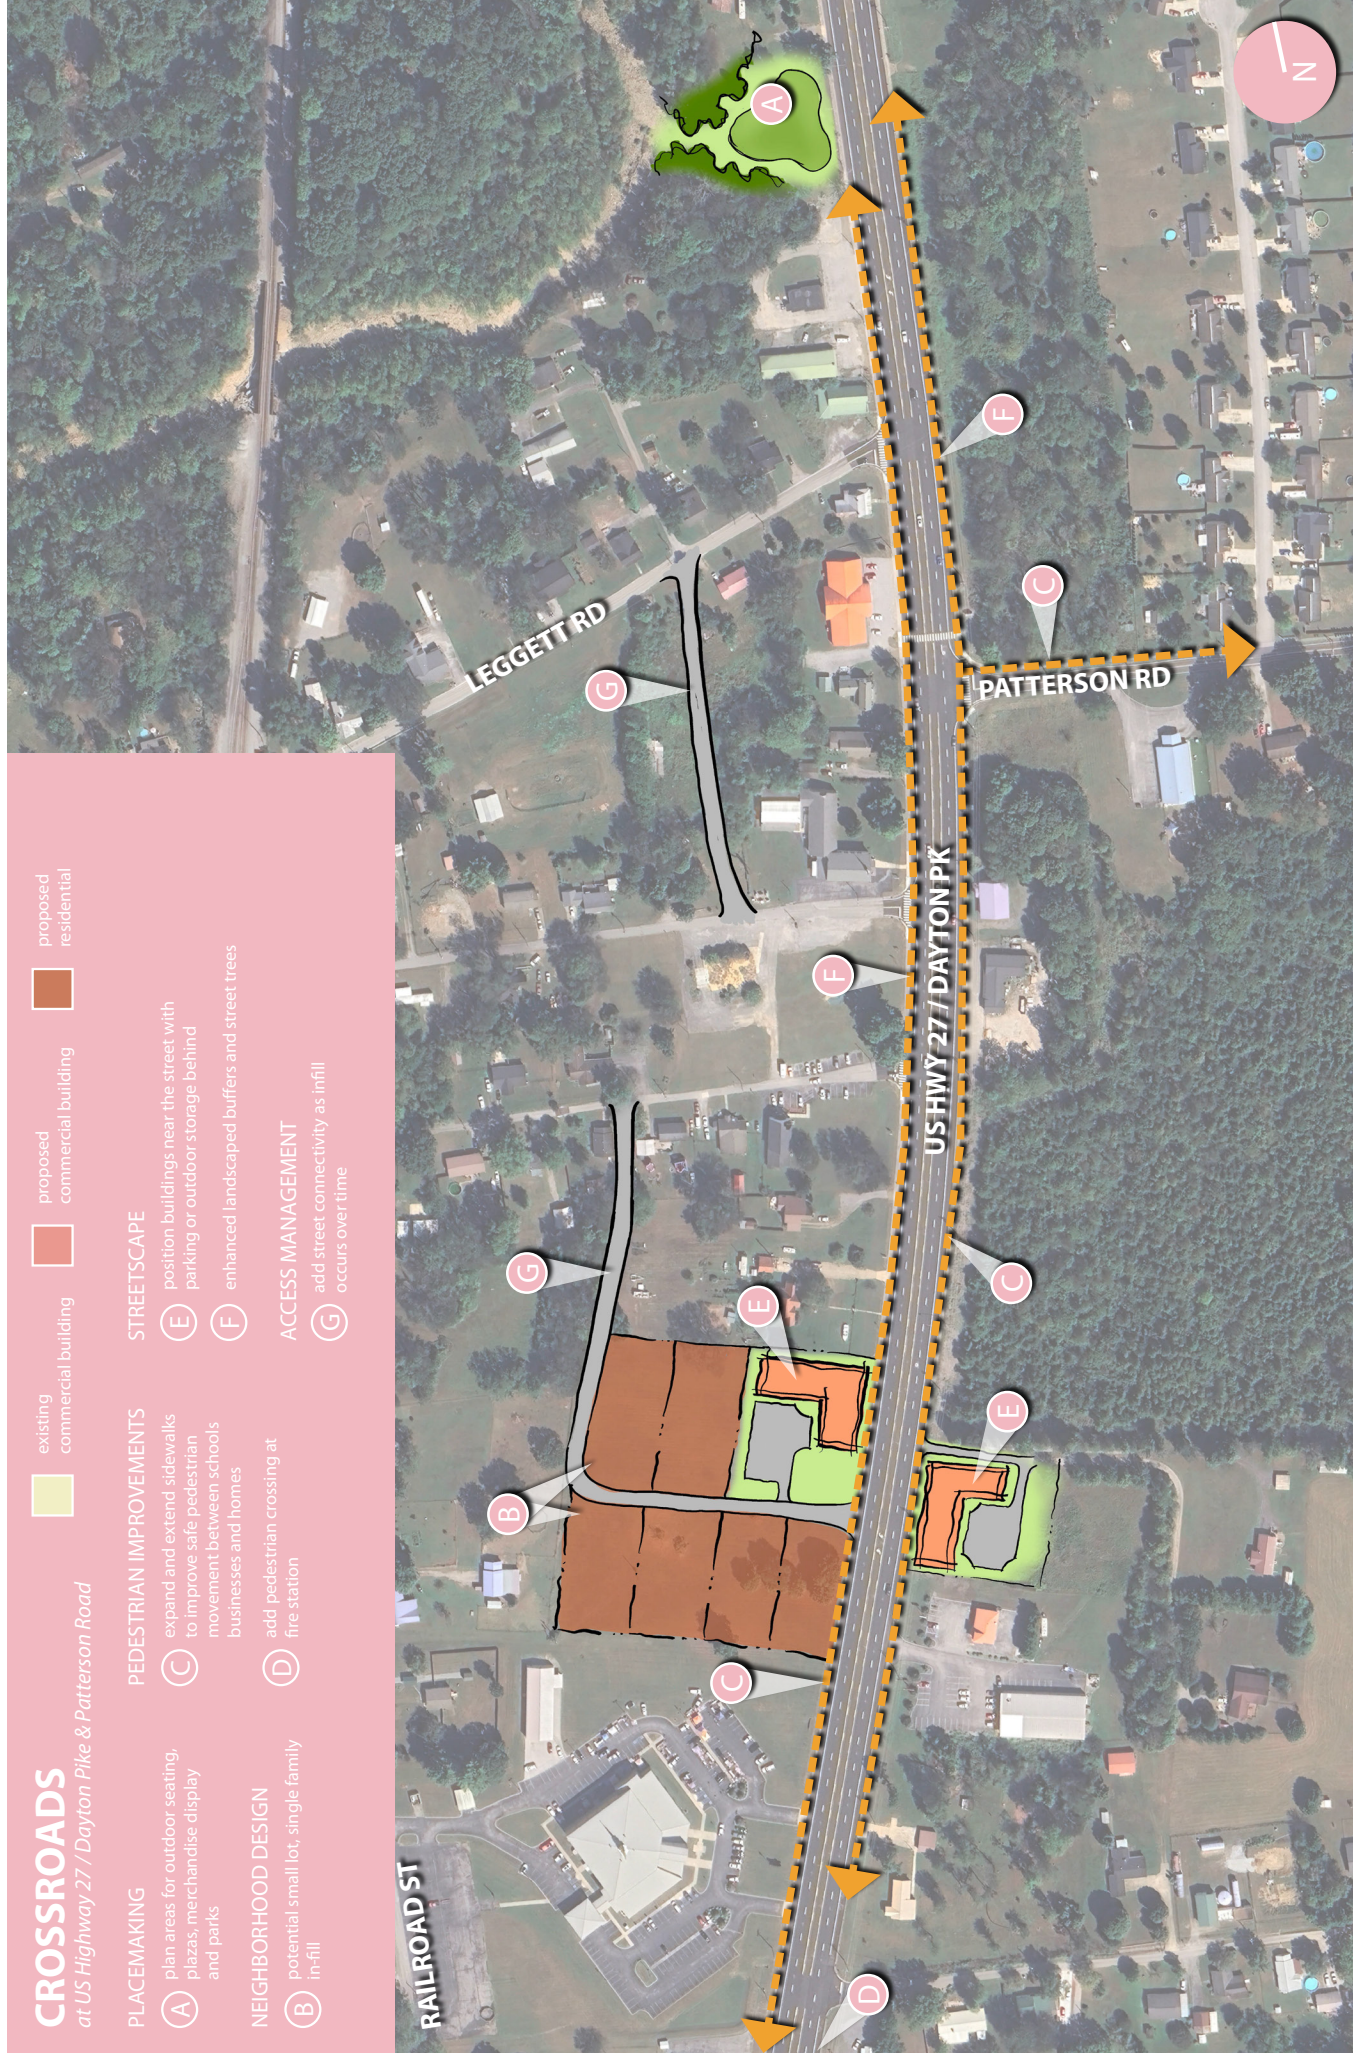

- (C) expand and extend sidewalks to improve safe pedestrian movement between schools and homes
- (D) add pedestrian crossing at fire station

STREETSCAPE

- (E) position buildings near the street with parking or outdoor storage behind
- (F) enhanced landscaped buffers and street trees

ACCESS MANAGEMENT

- (G) add street connectivity as in-fill occurs over time

4.3.8 GOALS, POLICIES & COMMUNITY THEMES MATRIX

Community Themes

● Directly influenced by the Community Themes					
● Supports or reinforces the Community Themes					
1. BALANCE GROWTH, ECONOMY & COMMUNITY CHARACTER					
1.13.1	The geography of Area 13 is shaped by sloping hillsides and creek drainages extending from the Cumberland Plateau to the flat farmland, woodlands, and wetlands bordering the Tennessee River. In comparison to the rest of Hamilton County, Area 13 is still sparsely populated, with a focus on agriculture and rural lifestyles. The primary concern of local residents is to maintain their agricultural heritage and rural way of life. Develop a mechanism for farmland preservation.		●		
1.13.2	Residents also expressed concerns about the cost of housing, increased property valuations, and worry that the pace of change experienced elsewhere in Hamilton County, will lead to a rapid erosion of the local culture and landscapes. - Hold development to base density on A1 property and incentivize affordable attached or zero lot-line single family on infill lots in existing centers.	●			
1.13.3	Sale Creek in the heart of Area 13, is equidistant from commercial centers in Soddy-Daisy and across the Rhea County line in Dayton. These centers are plenty close to serve needs for larger format retailers a for population that is dispersed across the area and commutes for school, work, and shopping. Focus economic development on growing local businesses in Sale Creek and Bakewell.	●			●
1.13.4	Farmland preservation, protection of recreation areas and natural resources, and targeted housing affordability strategies should be the primary focus of policies shaping future growth and development.	●	●		
1.13.5	As growth inevitably comes to Area 13, development should be focused in existing community centers in Sale Creek and Bakewell in well planned clusters along US 27.	●			
1.13.6	The McDonald farm is an asset that should be a carefully stewarded resource that serves as a place to celebrate the agricultural heritage of the Sale Creek region and to explore ways for it to thrive into the future. If the Farm successfully builds upon authentic local culture, values, history, and the McDonald family's knack for agricultural enterprise, it will provide a resource for the Sale Creek area to grow economic opportunity by amplifying local businesses, farms, and trades people rather than supplanting them. McDonald Farm can also serve as a focal point for of all Hamilton County to gather, recreate, learn, and innovate, all while supporting the Sale Creek economy.	●	●		●
2. PROTECT & ENHANCE NATURAL RESOURCES					
2.13.1	The escarpment of the Cumberland Plateau, the adjoining canyons containing Possum Creek, Middle Creek, Rock Creek, Sale Creek, and the wetlands and floodplains they spill into as they low towards the Tennessee River set the edges for the villages of Bakewell, Sale Creek and the surrounding farmland. Convene a coalition of private land owners, conservation organizations and land owners to develop a coordinated strategy for preserving these landscape in a manner consistent with local culture, and that increases recreational access.		●		
2.13.2	The recreational assets of along the Cumberland Plateau in northern Hamilton County are largely hidden gems known to locals and recreational specialists. They should be the center piece of ongoing preservation and stewardship strategies but also an asset to support local businesses and visitation.		●		
2.13.3	Once preserved, strategies should be put in place to steward these lands, to promote them, and to foster sustainable forms of economic development on adjacent lands that respect these unique settings but allow synergistic uses that can provide jobs, tax revenues, and sources of funding for stewardship or private partnership in preservation efforts. Employ the resort recreation Place Type as part of this strategy.	●			
2.13.4	McDonald Farm should be a model for how to create synergies between preservation, agriculture, recreation, and economic opportunity. Follow up the market analysis of this property with a phased master plan that begins with input of local stakeholders and shapes them into actionable improvement phases that realize the synergies outlined above while respecting the history and culture of the McDonald Family and the Sale Creek community.	●			●

3. PRESERVE & ENHANCE OUTDOOR RECREATION					
3.13.1	Northern Hamilton County is flush with state, county, and municipally managed recreational lands, creeks, trails, parks, and the Tennessee River. Hamilton County should partner with TDEC and their newly organized Office of Outdoor Recreation to highlight all that northern Hamilton County has to offer visitors to our area and steward these assets to increase recreational opportunities and synergistic opportunities for commerce.				
3.13.2	Possum Creek and Sale Creek should be planned as official blueways. The County should work with public and private partners to add points of access, highlight and augment permanent and seasonal attractions, recreation base businesses, and places to stay. Make an effort to have these routes recognized in the State of Tennessee Blueways Plan and seek related investments in recreational infrastructure.				
3.13.3	Work with the State Department of Tourism, Pick Tennessee, Chattanooga Tourism Co. and others to recognize agricultural heritage and agritourism should as part of the recreational landscape in Hamilton County. In this way agriculture and recreation can partner to develop marketing and promotions that highlight Hamilton County's best qualities and create economic opportunities from our most valued landscapes. McDonald Farm is positioned to be a focal point for this strategy where recreation, agricultural, and heritage based tourism enthusiasts can convene. Investments should first benefit Sale Creek Area residents and then build a regional market.				
4. PROMOTE CONNECTIVITY AND MULTI-MODAL TRANSPORTATION					
4.13.1	The rural nature of Area 13 does not lend itself to area wide pedestrian connectivity or comprehensive transit service. Instead the focus should be on targeted sidewalk pedestrian infrastructure enhancements near schools, churches, and community gathering places.				
4.13.2	Sidewalk connections along US 27 should be phased in as the villages of Bakewell and Sale Creek redevelop or uses incrementally intensify and well designed crossings should be added at key intersections. Leggett Road, Patterson Road, Reavley Road, and at Retro Hughes and McCallie Ferry. These improvements should be planned in phases and either required of developers as properties are converted or installed by the County and charged back to them over time.				
4.13.3	Curb, gutters, and sidewalks may not be necessary in rural subdivisions at base density. However soft surface paths to provide a safe space for fitness activities and kids to get to a school bus stop should be a standard requirement.				
4.13.4	Subdivisions above base density are an indication of a transition from agriculture to residential character. These project should be required to construct a higher level of pedestrian improvements and preserve ROW for connectivity to adjacent parcels anticipating the need for connection of a neighborhood scale street network. Disconnected communities with individual networks of cul-de-sac create barriers to response time for emergency services, accelerate peak period congestion issues where large subdivisions exit on to collectors, and can increase the route times for school buses extending the academic day for students.				
4.13.5	Recreational trail connectivity should also be a priority, starting with closing gaps in the regional Cumberland Trail system. Utilizing the Cumberland Trail as a spine, TDEC, Hamilton County Parks, and others should work to extend spurs along the area creek corridors and into other prime recreational lands like the McDonald Farm.				
5. PROVIDE ADEQUATE INFRASTRUCTURE					
5.13.1	Residents expressed concerns in town hall and open house meetings about lack of water distribution infrastructure, funding and response times for emergency services, and adequacy of storm water provisions for new development. Most felt that these aspects of community were adequate to serve existing residents but that new development beyond by right entitlements would require investments in infrastructure that they do not support.				

<div> <div></div> Directly influenced by the Community Themes </div> <div> <div></div> Supports or reinforces the Community Themes </div>					
5.13.2	Per the Hamilton County Fire and Rescue Services Evaluation Report, Appendix F, Sale Creek Volunteer Fire & Rescue is 100% volunteer, serving an 82 square mile area. They maintain a 4/4x ISO rating on par with much of the County and better than many rural districts in Tennessee. However the district faces some of the largest average distances to a hydrant in Hamilton County, terrain that limits connectivity and increases response time, as well as staffing and budget constraints. Hamilton County should work with the district to anticipate new growth areas and plan accordingly for new water infrastructure, stations, staff, and equipment in these areas.				
5.13.3	US 27 is the spine of the area road network and has plenty of capacity. Almost all other roads in Area 13 are in the County road network and can be characterized as having narrow pavement sections and right of ways and no shoulders. These roads adequately serve existing residents but would require significant and costly improvements where new development over base density is approved.				
5.13.4	The low lying nature of much of the terrain makes flooding a problem during storm events. New development should be required to provide engineered storm water plans proving adequate detention area on property or be required to pay for regional solutions.				
6. PROVIDE SUITABLE COMMERCIAL & MIXED-USE CENTERS					
6.13.1	Area 13 is not heavily populated and housing is dispersed across the 82 square mile area. Most residents seek goods and services in Soddy-Daisy or Dayton. As the communities of Sale Creek and Bakewell grow, these existing villages should be the focal point for additional commercial growth and residential density.				
6.13.2	A Neighborhood Center is possible adjacent to or associated with the McDonald Farm. However, the commercial tenants that typically anchor a Neighborhood Center (grocers, hardware, restaurant, etc.) will likely only be attracted to this site once utility infrastructure is in place, the primary uses for the farm are more established.				
7. PROVIDE A RANGE OF HOUSING OPTIONS					
7.13.1	The lack of sewer and water infrastructure, constraints on emergency services, undulating terrain, and flood prone low lands make Area 13 a place where development should remain at rural densities and only in the areas that can be appropriately engineered and serviced. Additional housing density and diversity of form including options for older area residents should occur in Sale Creek and Bakewell before extending outward. Infrastructure investments should also benefit these communities prior to extending further outward.				
7.13.2	The McDonald Farm property has primary uses and community functions that should take precedence over and precede housing. However, the farm is a location that could accommodate a traditional neighborhood design or agriculture based cluster subdivision as a complimentary uses to the primary community and recreation functions as a later phase.
