

Map change as shown: Based on the areas previously designated as Countryside Residential 2.5 in Areas 8 & 9, mapping changes have been made:

- Parcels previously designated Countryside Residential 2.5 within Areas 8 & 9 that front existing sewer lines—identified through GIS files provided to the RPA and confirmed by discussion with Hamilton County—have been redesignated as Suburban Residential.
- If sewer was deemed not available, the remaining areas (those not moved to Suburban Residential) remained as Countryside Residential.

Where these changes resulted in isolated pockets of Countryside Residential surrounded by Suburban Residential, the affected parcels within those pockets were also redesignated as Suburban Residential to maintain consistency in Place Type designation.

Only properties previously shown as Countryside Residential 2.5 were changed to Suburban Residential if sewer is available based on this methodology.

There are areas shown as having sewer infrastructure but capacity is very constrained or limited. In these areas, the Place Type designation remained Countryside Residential (Note: WWTA has issued existing capacity letters in these areas).
